Conference background

The 2026 Conference marks the 21st edition of the Interdisciplinary Conference on Intangibles, Sustainability and Value Creation. Since 2005, the Conference has provided an international forum for interdisciplinary discussion and for showcasing advances in knowledge, understanding and practice concerning intangibles, sustainability and value creation, with particular reference to reporting, management, control and corporate governance.

Building on more than two decades of research and debate, the 2026 edition shifts attention from ambition and expansion to implementation, recalibration and contestation. Regulatory frameworks such as the CSRD, ESRS and ISSB standards, together with emerging due-diligence requirements, promise greater transparency and accountability while creating new managerial, organisational and governance challenges.

The Conference strengthens the bridge between academic research and organisational practice. It examines how intangible resources, environmental knowledge and sustainability requirements are translated into reporting and disclosure, managerial action, management-control systems and decision-making processes. It welcomes theoretical, empirical and interdisciplinary contributions from accounting, management, governance, sustainability and related fields.

Despite the progress achieved over the past 21 years, many questions remain unresolved and contested. The Conference therefore encourages constructive international and multidisciplinary debate, including qualitative, longitudinal, interventionist and engaged scholarship.
