

THE SAHLGRENKA ACADEMY
GENOMICS CORE FACILITY

How to download data via sftp from our local server

Be sure to be connected through VPN to the University of Gothenburg, if you lack an x-account, please contact bioinformatics@gu.se, so we can open the firewall to a fixed IP address of your choice.

You can access your data via **FileZilla** or connecting through **sftp**.
You will need the following:

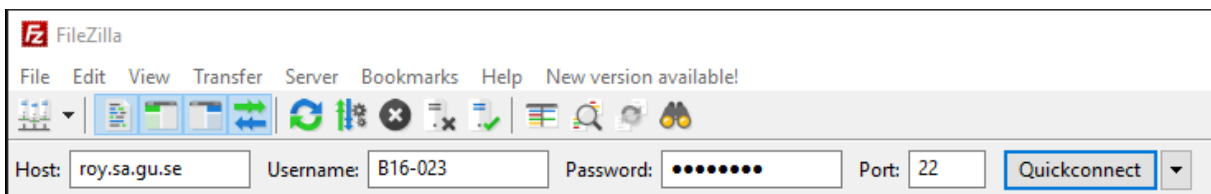

Host:	roy.sa.gu.se
Username:	provided in a separate mail
Password:	provided in a separate mail
Port:	22

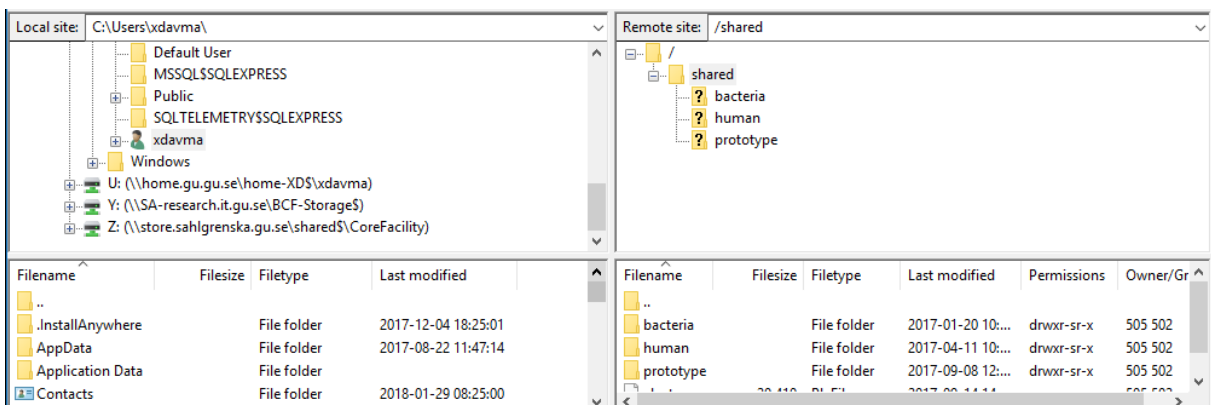

THE SAHLGRENKA ACADEMY GENOMICS CORE FACILITY

FileZilla:

Download FileZilla Client from: <https://filezilla-project.org/download.php?type=client>
Fill in the Host, Username, Password and Port and press **Quickconnect**:

Enter the shared folder on your left window and drag the data folder you want to download, to the window on your right

Your computer

Our server

sftp:

At your command line, connect to the server via sftp by typing (use your log in info):

```
sftp username@host
```

Enter the shared/ by typing:

```
cd shared/
```

List the content of the folder by typing:

```
ls
```

Download the data folder you want by typing:

```
get -R your_folder_name
```

Once you have downloaded your data, you can exit typing:

```
exit
```
