Summary

As professor of environmental economics in Gothenburg I have during the last three decades built up the Unit for Environmental Economics with a staff of about a dozen PhDs and a number of graduate students. We give a unique PhD program in environmental economics and have had more than 50 graduate students from developing countries (financed by the Swedish International Development Cooperation Agency, Sida), as well as masters and undergraduate programs and a large number of other research and teaching activities.

2018 I presided over the World Conference of Environmental and Resource Economics in Gothenburg. With 1500 participants it was the biggest ever! For the academic year 2015-2016 I was elected to a guest professorship at the Collège de France. 2011-2014 was spent in part on the AR5 of the IPCC where I was CLA of chapter 15 on policy instruments. 2012-2013 I was on sabbatical leave from Gothenburg and worked as Chief Economist at the Environmental Defense Fund in New York. My main areas of work are instrument design for climate and environmental policy, catch shares in fisheries and theory of discounting.

I have published over 110 articles in refereed journals, authored or edited more than a dozen books and a large number of book chapters and official reports. I have also been quite prolific when it comes to diffusion into journalistic articles ranging from having my own opinion piece in local media to writing for New York Times, Le Monde or The Times. The main focus of my

work has been on environmental policy instruments with applications to energy and climate, industry, transport economics and finally resource management in developing countries. Many of these areas benefit from interdisciplinary collaboration with natural scientists, engineers, medical or other experts which I find to be a challenging and exciting part of professional life. For more details, see list of publications below

I teach courses in natural resource economics and environmental policy at the graduate and undergraduate levels. I have been the advisor for about two dozen PhD theses and I do quite a lot of external lecturing and consulting.

Consultancy and Project Funding

The Environmental Economics Unit I have started in Gothenburg has been the largest recipient of external funding in the University of Gothenburg according to surveys by GU. Our largest institutional collaboration between the Unit for Environmental Economics and Sida. Our goal is to create a national/regional environmental economic capacity in developing countries. The aim for the environmental economists trained at EEU, is to work on solving and finding effective solutions to the environmental problems that exist in their respective country. In order for this capacity to be successful, the knowledge has to be spread out to as many influential institutions as possible in order to influence the decision makers. We focus on academic institutions that have the ability to teach future researchers, civil servants and teachers as well as political advisors. With finance from the Swedish International Development Cooperation Agency, Sida, EEU has chosen to have people from developing countries as their main target group. We have a PhD program for students from developing countries; we give courses in environmental economics and we have a visiting researcher's program.

In addition to this I am, and have been, involved with a large number of other projects. Among the most important just now are FORMAS and MISTRA – Clipore programs on climate change. In addition to this I have had many consultancy tasks for various organizations and companies including the Geneva Association, Göteborg Energi, Volvo, Swedepower, Nynäs, Environmental Defense Fund, Länsparbanken, Naturvårdsverket,

Riksrevisionen, the OECD, the World Bank and several Swedish ministries including the Ministries for finances, environment and agriculture and the Research Council of Norway. I have led a large forecasting and modelling consultancy for Swedepower in which we built forecasting models for electricity demand in Mexico for the Comisión Federal de Electricidad. Since 1991, we have a large-scale and long-run collaboration with SIDA involving a large group of researchers at our department in various consulting activities for SIDA. The Environmental Economics Unit has also been successful in attracting considerable research funds from various research boards such as AFR, BFR, DFE, FORMAS, Efn, FRN, KFB, SAREC, SNV, the municipality of Göteborg, the EU, MISTRA and others.

Teaching and Supervision

Current Teaching

- Masters course in [Environmental Economic Policy Instruments](#), each spring at the University of Chalmers. Next course starts January 2021.

In addition I teach the PhD courses:

- Graduate course in **Natural Resource Economics**.
- Graduate course in **Environmental Economic Policy Instruments**.

Finally, I have also taught short courses on environmental policy organized by the World Bank and other organizations (2-5 days) in Washington, Bangkok, Zaragoza, Oaxaca, Turalba and La Habana, see C78, C89, C97, C147 and C151

During the years I have held various posts at the Department of Economics I have taught a variety of first year courses. I have also taught, either in Gothenburg or in other universities, various advanced courses in micro, development economics, transport economics, energy economics and currently I participate in teaching environmental economics both at the undergraduate and graduate level. In addition to the courses on natural resource economics and policy instruments, for which I have the main responsibility, I also participate in various other courses inside and outside the department. My main teaching task is the supervision of a large number of PhD students.

PhD Supervision

We have had many PhD students in environmental economics supervised by me and other supervisors at the EEU. The following is a list of over 35 PhD students I have supervised in the past, either as their main supervisor or as a co-supervisor. Below that is a group supervised

within my research group but not by me. In total they are more than 50 theses since 1988. 16 of them were Swedes.

Research

Practically all my research is focused on the design of policy instruments. Within this broad area, I focus on a number of applications:

1. Economics of Energy Use and Climate Change (The Design of Policies)

I have earlier done a considerable amount of work on the elasticities of fuel demand. More recently I have looked at the efficiency of various other policy instruments in the area of transport, industry and energy. Some of this work has been done together with Christian Azar, other colleagues at the dept of Physical Resource Theory. Currently I am working on extending this framework to all the large environmental challenges of the Anthropocene.

2. The Theory and Practice of discounting

Many important environmental issues such as climate change or nuclear power involve very long time periods making the treatment of time crucial. The usual practice of applying one single constant discount factor reduces all values in the distant (and even intermediate) future to virtually nothing. This is ethically indefensible and often runs contrary to the intuition behind our citizens concern for the future. I have worked to show that discount rates may be falling over time due to uncertainty and to declining growth rates. I have most importantly worked on the use of multiple discount rates or the introduction of relative prices into the same integral

framework where discounting is used.

3. Resource Management in Developing Countries

This is the main area of work for most of my students and many colleagues and within the EfD and has led for instance to work on the management of game parks and other natural resources. I have worked in particular on the design of different policy instruments to deal with problems related to overfishing, the design of catch shares and the importance of genetic diversity among cod.

4. Comparative Efficiency of Economic Policy Instruments in various Sectors

This research focuses on empirical comparisons of the efficiency of policy instruments used in various sectors or countries. Examples include refunded emission payments for the reduction of NO_x from industrial combustion. Other applications range from policy instruments in the chemicals sector to their use in the management of ports, airline traffic, health care and so forth.

List of Publications

Some publications are available in PDF format from the EEU homepage.
More information can be found at the Google Scholar profile.

The list of publications includes more than 300 titles subdivided under the following headings:

1) Major Research Publications (>170 titles)

1a) 121 Articles in refereed journals

1b) 22 Books/Monographs

1c) 31 Articles in Books

2) Minor research articles, memoranda and working papers, (>90 titles).

3) A selection of journalistic articles, (>200 titles).

4) Leaders in the daily local newspaper ETC.

* Within each subheading the titles are listed in inverse chronological order.

The list is then followed by a list of presentations, speeches etc.
