

# General syllabus for third-cycle study programmes in Latin

Decision-maker	Marie Demker, Dean
Executing officer	Ulrika Josefsson
Date of decision	2022-06-08
Period of validity	2022-06-08 - Until further notice
Summary	The syllabus describes the objectives, content and examination of the study programme as well as admission and selection.
Translation	This document is a translation of the Swedish original. In the event of problems of interpretation or differences between the Swedish and English text, the Swedish text which constitutes the basis of the information, shall always take precedence

## **Name of degree and subject area description**

This general syllabus is for the Degree of Doctor of Philosophy in Latin respectively for the Degree of Licentiate of Philosophy in Latin. The research conducted in the subject area covers several chronological periods and focuses on linguistics, real philology, epigraphy, comparative literature, editorial philology etc.

## **General national outcomes for Degree of Doctor**

According to the Qualifications Ordinance for the Degree of Doctor in the Higher Education Ordinance, Appendix 2, the outcomes for the Degree of Doctor are as follows:

- Demonstrate broad knowledge in and a systematic understanding of the field of research as well as in-depth and up-to-date specialist knowledge within a defined area of the field of research, and
- Demonstrate familiarity with scientific method in general and with the specific methods used in the field of research in particular.
- Demonstrate an ability to scientifically analyse and synthesise and to independently and critically evaluate and assess new and complex phenomena, issues and situations
- Demonstrate an ability to critically, independently, creatively and with scholarly thoroughness, identify and formulate research questions as well as to plan and conduct research and perform other qualified tasks using appropriate methods within specified time limits and to review and assess such work
- Demonstrate through a dissertation the ability to make a significant contribution to the formation of knowledge through their own research
- Demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general
- Demonstrate an ability to identify needs for additional knowledge, and
- Demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity
- Demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics, and
- Demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used.

## **General national outcomes for Degree of Licentiate**

According to the Qualifications Ordinance for the Degree of Licentiate in the Higher Education Ordinance, Appendix 2, the outcomes for the Degree of Licentiate are as follows:

- Demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular
- Demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work

- Demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general
- Demonstrate the skills required to participate autonomously in research and development work and to work autonomously in some other qualified capacity
- Demonstrate the ability to make assessments of ethical aspects of their own research
- Demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and
- Demonstrate the ability to identify the personal need for further knowledge and take responsibility for their ongoing learning.

## Entry and admission requirements

In order to be admitted to the study programme, the applicant must fulfil the general entry requirements and specific entry requirements in accordance with Chapter 7 of the Higher Education Ordinance.

According to the Higher Education Ordinance Chapter 7 Section 39, a person meets the general entry requirements for third-cycle courses and study programmes if they:

1. have been awarded a second-cycle qualification, or
2. have satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second-cycle, or
3. have acquired substantially equivalent knowledge in some other way in Sweden or abroad.

To be admitted to doctoral education in Latin, in addition to general entry requirements, the following is required:

1. at least 30 higher education credits in Latin from the second cycle, of which at least 15 must be from a degree project, or equivalent,
2. the types of English skills needed to be able to benefit from faculty-wide course activities and participate actively in seminars etc.,
3. at least 30 higher education credits in Classical Greek.

## Admission and selection

Admission to doctoral education in Latin normally occurs in connection with the Department's advertising of doctoral positions. For admission, funding for the applicant's doctoral studies must be secured.

According to Chapter 7 Section 41 of the Higher Education Ordinance, the selection shall take into account the ability of the applicants to benefit from the course or study programme. The applicant must attach the following as grounds for this selection:

1. Essays, independent projects (degree projects) and publications, if any. These are assessed on the basis of the following criteria: a) ability to autonomously identify and formulate relevant problems, b) ability to conduct an argumentation with consideration of the tenacity of the arguments, c) application of scientific concepts in conjunction with the analysis of the utilised data, d) high language competence in using source material, e) independence and originality.
2. A project outline in which the applicant specifies a research area that they would like to develop, justifies its relevance and discusses which theories, methods and materials may be used. The

project outline is assessed on the basis of the following criteria: a) ability to formulate research questions/scientific problems, b) familiarity with previous and current research in the area, c) independence and originality, d) whether the formulated problems are linked to current research and whether they are relevant in relation to the opportunities presented by the material, e) whether the described methods for collection and analysis of data are adequate, and f) whether the project plan is deemed realistic with respect to feasibility within the framework of the programme.

Recruitment and selection take into account the Department's supervision resources in the doctoral student's area of research focus. Admission may include interviews in addition to the examination of the qualifications submitted. The decision on admission is made by the Head of Department after preparation at the Department.

## **Content and structure of the programme**

Doctoral education in Latin comprises 240 credits for the Degree of Doctor and 120 credits for the Degree of Licentiate.

Third-cycle study programmes include coursework, with each course being examined as it is completed, and the doctoral student's own research project, which leads to a scholarly thesis.

As part of their education, doctoral students are to participate in seminar activities. Doctoral students are also to participate in joint activities within their department unless there are special reasons for not doing so.

The study programme includes a coursework part which both in the case of the Degree of Doctor and in the case of the Degree of Licentiate comprises 60 credits.

Compulsory courses (30 higher education credits):

Theory of Science for the Humanities, 7,5 higher education credits

Philological Theory and Method, or The Transmission of Premodern Texts, 7,5 higher education credits

Latin Syntax and Stylistics, 5 higher education credits

Latin literature from antiquity and later periods, 5 higher education credits

Teaching and Learning in Higher Education, Basic Course, 5 higher education credits

Elective courses (30 higher education credits):

Elective courses shall be determined in consultation with the third-cycle student's examiner and supervisors. Third-cycle students with a linguistic focus are recommended to select courses in linguistic theory and method, while those specialising in comparative literature are recommended to select courses in theory and method in comparative literature. All students are recommended to select additional courses in Latin literature from different eras. Courses can be selected from the faculty- and department-wide courses, or courses at other higher education institutions.

Additional information

The basic course in teaching and learning in higher education (5 higher education credits) should be completed during the first year of the programme.

If a doctoral student would like to transfer credits from previous courses and study programmes, this must be specified in their individual study plan.

The thesis prepared for the Degree of Doctor comprises 180 credits. It may take the form of a monograph or a compilation thesis. A licentiate thesis may form part of a doctoral thesis, in either revised or unrevised form.

The licentiate thesis comprises 60 credits.

The doctoral student is expected to report on their thesis work regularly. In the first instance, this should take place via one of the department's seminars.

Further details about this are set out in the Rules for Third-Cycle Education at the Faculty of Humanities and the department's guidelines (Institutionens riktlinjer för utbildning på forskarnivå).

The doctoral thesis is defended at a public defence. When assessing the thesis, both its content and defence will be taken into consideration. The thesis is assessed using the grades of Pass or Fail.

Licentiate theses are defended at a public seminar. When assessing the Licentiate thesis, both its content and defence will be taken into consideration. The thesis is assessed using the grades of Pass or Fail.

## Supervision

For each doctoral student, at least two supervisors are to be appointed, one of which shall be the main supervisor and the other shall be the co-supervisor. At least one of the supervisors is to be employed at the University of Gothenburg, ordinarily in the department in which the doctoral student is placed. At least one of the supervisors must have the qualifications required for appointment as a docent/reader and at least one of the supervisors must have completed a course in doctoral supervision.

The doctoral student is entitled to a level of supervision that is at a minimum in accordance with the standard determined by the Faculty Board (see Rules for Third-Cycle Education at the Faculty of Humanities).

A doctoral student who so requests is to be permitted to change supervisor.

## Individual study plan

Upon admission, the doctoral student and their supervisors are to draw up an electronic individual study plan in consultation with the doctoral examiner, which is to be established no later than two months after the commencement of studies.

The individual study plan is to be reviewed at least once each year. This follow-up is to clearly state how the doctoral student is progressing within the programme.

In conjunction with drawing up the individual study plan, the doctoral student is entitled to request the transfer of credits from previously passed second- or third-cycle courses and study programmes. Credits that are counted towards the general or specific entry requirements may not also be counted as credits at third-cycle level and must be replaced by another course. Otherwise, the following options apply.

- A doctoral student who has completed and passed a course at second-cycle level which is included among the compulsory or optional courses at third-cycle level is entitled to request that the course be replaced with another course of the same scope in their individual study plan. This does not impact the programme length for the Degree of Doctor.

- A doctoral student who has completed parts of their doctoral studies while admitted to doctoral education at another higher education institution or in another subject may request that these credits be transferred without being replaced by other courses. This does have an impact on the programme length for the Degree of Doctor, which is reduced to the corresponding extent.

The ISP is to include a timetable with an associated funding plan for the entire study period up until the planned date for the defence of the thesis.

## **Transitional provisions**

Doctoral students admitted prior to 1 June 2016 may, in consultation with their supervisors and doctoral examiner, petition the Head of Department to transfer to this general syllabus.
