| Decision-maker | Marie Demker, Dean |
| Executing officer | Ulrika Josefsson |
| Date of decision | 2022-06-08 |
| Period of validity | 2022-06-08 - Until further notice |
| Summary | The syllabus describes the objectives, content and examination of the study programme as well as admission and selection. |
| Translation | This document is a translation of the Swedish original. In the event of problems of interpretation or differences between the Swedish and English text, the Swedish text which constitutes the basis of the information, shall always take precedence |

Name of degree and subject area description

The degree obtained are the Degree of Doctor and the Degree of Licentiate in Linguistics. Linguistics studies the human language ability, human languages and language communication.

General national outcomes for Degree of Doctor

According to the Qualifications Ordinance for the Degree of Doctor in the Higher Education Ordinance, Appendix 2, the outcomes for the Degree of Doctor are as follows:

- Demonstrate broad knowledge in and a systematic understanding of the field of research as well as in-depth and up-to-date specialist knowledge within a defined area of the field of research, and
- Demonstrate familiarity with scientific method in general and with the specific methods used in the field of research in particular.
- Demonstrate an ability to scientifically analyse and synthesise and to independently and critically evaluate and assess new and complex phenomena, issues and situations
- Demonstrate an ability to critically, independently, creatively and with scholarly thoroughness, identify and formulate research questions as well as to plan and conduct research and perform other qualified tasks using appropriate methods within specified time limits and to review and assess such work
- Demonstrate through a dissertation the ability to make a significant contribution to the formation of knowledge through their own research
- Demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general
- Demonstrate an ability to identify needs for additional knowledge, and
- Demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity
- Demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics, and
- Demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used.

General national outcomes for Degree of Licentiate

According to the Qualifications Ordinance for the Degree of Licentiate in the Higher Education Ordinance, Appendix 2, the outcomes for the Degree of Licentiate are as follows:

- Demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular
- Demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work
- Demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general

- Demonstrate the skills required to participate autonomously in research and development work and to work autonomously in some other qualified capacity
- Demonstrate the ability to make assessments of ethical aspects of their own research
- Demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and
- Demonstrate the ability to identify the personal need for further knowledge and take responsibility for their ongoing learning.

Subject area specific and supplementary outcomes

For completion of the degree of doctor in Linguistics at the University of Gothenburg, the following more specific requirements are included:

Competence and skills

For the Degree of Doctor, the third-cycle student shall:

- demonstrate the ability to work as a researcher and academic tutor within linguistics, but also within professions that include advanced investigatory, preparatory and analytical work within public or private sectors.

Judgment and approach

For the Degree of Doctor, the third-cycle student shall:

- demonstrate deepened insight into research possibilities and limitations within linguistics, its role in society and its relation to other subjects. The third-cycle student shall also have acquired the ability to critically reflect over the student's activities from this perspective.

Entry and admission requirements

In order to be admitted to the study programme, the applicant must fulfil the general entry requirements and specific entry requirements in accordance with Chapter 7 of the Higher Education Ordinance.

According to the Higher Education Ordinance Chapter 7 Section 39, a person meets the general entry requirements for third-cycle courses and study programmes if they:

1. have been awarded a second-cycle qualification, or
2. have satisfied the requirements for courses comprising at least 240 credits of which at least 60 credits were awarded in the second-cycle, or
3. have acquired substantially equivalent knowledge in some other way in Sweden or abroad.

To be admitted to doctoral education in linguistics, in addition to general entry requirements, the following is required:

1. A minimum of 60 higher education credits in linguistics, phonetics, language technology, or speech and language therapy at second-cycle level, of which 15 credits comprise an independent project; additionally a minimum of 90 hec in closely related subjects such as philosophy, cognitive science, communication or language subjects or equivalent knowledge, or

2. a minimum of 90 higher education credits in linguistics, phonetics, language technology, or speech and language therapy, of which at least 30 higher education credits at second-cycle level, of which a minimum of 15 credits comprise an independent project or equivalent skills.

(These two entry requirements are a result of the two recommended study routes at second-cycle level; the student has either 90 higher education credits in philosophy, cognitive science, communication or language subjects at first-cycle level, followed by 60 higher education credits in linguistics, phonetics, language technology or speech and language therapy at second-cycle level. Alternatively, the student has 90 higher education credits in linguistics, phonetics, language technology or speech and language therapy.)

The types of Swedish and English skills needed to be able to benefit from compulsory parts of the course and to be able to actively participate in seminars and similar activities. If the third-cycle student does not speak Swedish as a first language, the student is expected to obtain such knowledge so the student can actively participate in the research environment.

Admission and selection

Admission to doctoral education in Linguistics normally occurs in connection with the Department's advertising of doctoral positions. For admission, funding for the applicant's doctoral studies must be secured.

According to Chapter 7 Section 41 of the Higher Education Ordinance, the selection shall take into account the ability of the applicants to benefit from the course or study programme. The applicant must attach the following as grounds for this selection:

1. Theses, degree projects and any publications. These are assessed based on the following criteria:
 - a) if they demonstrate originality and creativity, in addition to familiarity with previous and current research within the field, b) if suitable methods for data collection and analysis are provided, c) if the results are grounded in theory and method and d) if conclusions and discussions are of high academic quality.
2. A project draft in which the applicant stipulates a research domain that the student would like to develop, justifies its relevance and discusses which theories, methods and materials would be relevant. The project draft is assessed on the basis of the following criteria: a) whether the draft displays the applicant's innovative abilities b) whether the draft displays familiarity with previous and current research within the field, c) if suitable methods for data collection and analysis are provided, and d) whether the draft is judged to be reasonable, as regards its implementation at third-cycle level. The project draft also provides supporting information for assessing the Department's supervisor competence within the research domain stipulated.

Recruitment and selection take into account the Department's supervision resources in the doctoral student's area of research focus. Admission may include interviews in addition to the examination of the qualifications submitted. The decision on admission is made by the Head of Department after preparation at the Department.

Content and structure of the programme

Doctoral education in Linguistics comprises 240 credits for the Degree of Doctor and 120 credits for the Degree of Licentiate.

Third-cycle study programmes include coursework, with each course being examined as it is completed, and the doctoral student's own research project, which leads to a scholarly thesis.

As part of their education, doctoral students are to participate in seminar activities. Doctoral students are also to participate in joint activities within their department unless there are special reasons for not doing so.

The study programme includes a coursework part which in the case of the Degree of Doctor comprises 60 credits, while for the Degree of Licentiate it comprises 40 credits.

Out of these, 30 credits comprise compulsory courses.

The following courses are compulsory:

- Linguistic Methods (15 hecr) (Includes General linguistic methods 7.5 hecr and one elective methodology course worth 7.5 hecr, for example, Experimental methods, Linguistic field methods, Language description interview, Methods of formalization, Corpus linguistics or Statistics).
- Classics in linguistic theory (7,5 hecr)
- Ethics, society, lifelong learning and responsibility (2,5 hecr)
- Presentation (written and oral) of own work at scientific conference and for society as a whole (5 hecr)
- The basic course in teaching and learning in higher education (5 higher education credits) should be completed during the first year of the third-cycle studies. This course is compulsory if the third-cycle students will be teaching.

Other courses are chosen in consultation with supervisors.

If a doctoral student would like to transfer credits from previous courses and study programmes, this must be specified in their individual study plan.

The thesis prepared for the Degree of Doctor comprises 180 credits. It may take the form of a monograph or a compilation thesis. A licentiate thesis may form part of a doctoral thesis, in either revised or unrevised form.

The licentiate thesis comprises 80 credits.

The doctoral student is expected to report on their thesis work regularly. In the first instance, this should take place via one of the department's seminars.

Further details about this are set out in the Rules for Third-Cycle Education at the Faculty of Humanities.

The doctoral thesis is defended at a public defence. When assessing the thesis, both its content and defence will be taken into consideration. The thesis is assessed using the grades of Pass or Fail.

Licentiate theses are defended at a public seminar. When assessing the Licentiate thesis, both its content and defence will be taken into consideration. The thesis is assessed using the grades of Pass or Fail.

Supervision

For each doctoral student, at least two supervisors are to be appointed, one of which shall be the main supervisor and the other shall be the co-supervisor. At least one of the supervisors is to be employed at the University of Gothenburg, ordinarily in the department in which the doctoral student is placed. At least one of

the supervisors must have the qualifications required for appointment as a docent/reader and at least one of the supervisors must have completed a course in doctoral supervision.

The doctoral student is entitled to a level of supervision that is at a minimum in accordance with the standard determined by the Faculty Board (see Rules for Third-Cycle Education at the Faculty of Humanities).

A doctoral student who so requests is to be permitted to change supervisor.

Individual study plan

Upon admission, the doctoral student and their supervisors are to draw up an electronic individual study plan in consultation with the doctoral examiner, which is to be established no later than two months after the commencement of studies.

The individual study plan is to be reviewed at least once each year. This follow-up is to clearly state how the doctoral student is progressing within the programme.

In conjunction with drawing up the individual study plan, the doctoral student is entitled to request the transfer of credits from previously passed second- or third-cycle courses and study programmes. Credits that are counted towards the general or specific entry requirements may not also be counted as credits at third-cycle level and must be replaced by another course. Otherwise, the following options apply.

- A doctoral student who has completed and passed a course at second-cycle level which is included among the compulsory or optional courses at third-cycle level is entitled to request that the course be replaced with another course of the same scope in their individual study plan. This does not impact the programme length for the Degree of Doctor.
- A doctoral student who has completed parts of their doctoral studies while admitted to doctoral education at another higher education institution or in another subject may request that these credits be transferred without being replaced by other courses. This does have an impact on the programme length for the Degree of Doctor, which is reduced to the corresponding extent.

The ISP is to include a timetable with an associated funding plan for the entire study period up until the planned date for the defence of the thesis.

Transitional provisions

Doctoral students admitted prior to 1 January 2016 may, in consultation with their supervisors and doctoral examiner, petition the Head of Department to transfer to this general syllabus.
