

What a researcher in social sciences – social work – can contribute with in infection control

Lena Andersson, senior lecturer, associate professor
 Department of Social Work
 University of Gothenburg

1

Social sciences

A social science is **any branch of academic study or science that deals with human behaviour in its social and cultural aspects.**

2

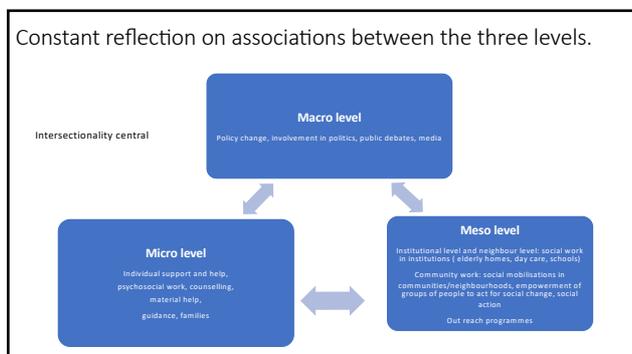

- Children, young people and families in Social Work
- Intervention and implementation
- Power-critical and global studies in social work
- Social work, health and ill health
- Social exclusion and control
- Violence and mental illness in a life cycle perspective
- Welfare in change
- Research networks
- Migration and Social Work (MIOS)
- Normality, care, rights and power
- Social Work in change: Organization, professionalization and knowledge formation...

- An ongoing social change work, which purposefully and with rational methods can prevent, limit, master, counteract and overcome the social problems in Swedish society (Harald Sweder 1983. Socialt arbete –en tankeram)
- “Social work is a profession in which trained professionals are devoted to helping vulnerable people and communities work through challenges they face in everyday life. Social workers practice in a wide variety of settings, united in their commitment to advocating for and improving the lives of individuals, families, groups and societies.” (Univ Buffalo)
- Strukturproblem/bristproblem
- Folkhälsovetenskap och strukturinriktat socialt arbete mkt lika

3

- To have a perspective of action/social change – not only academic investigations of the questions
- A life course perspective on social circumstances = SDG's
- Social justice at the core & empowerment & empathy
- Theory & practice - a practical profession
- BcS Social Work (Socionomprogrammet) – 1500 in the system. 200 / semester
- International master in social work and human rights + MSW swedish
- Research & practice

4

5

A few examples on areas

- Individuals and families (IFO)
- Elderly health care (äldre vård)
- Disability (funksionshinder)
- Addiction substance abuse
- Social psychiatry
- Housing services
- Migration
- + more

6

How to reach vulnerable groups in society with health information?

Social works role?

13

Social work organisation

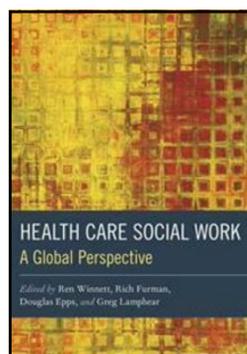

- Approximately 40 000 social workers (socionomer) in Sweden.
- Municipalities main employer
- Each municipality is responsible for ensuring that this is taken care of and that all people living in the municipality receive the help and support that is needed.
- In the new Social service law prevention is highlighted

14

Should social work be part of public health strategies in times of pandemics?
IFSW: “..social workers in all settings are engaged in health work and physical and mental resilience can make a major difference to all service users lives”

- Differing opinions..
- No, social workers knows to little about health issues (except mental illness and abuse). With the exception of medical social workers.
- Social worker don't have “the mandate” from the client to talk about health, illness and disease = ethical standpoint.
- Yes, social workers have contact with poor people long before they may be sick, they can suggest help seeking/ to enhance trust in health messages
- They can be gate keepers to health professionals
- They can work in multi-disciplinary out reach teams. Is common abroad, why not here
- Preventive work in new law (En ny socialtjänstlag (SOU 2020:47)

15

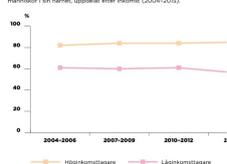

How?

- Common in other countrys
- Multi-diciplinary out- reach teams – health professionals, social workers, psychology
- Including also trusted people from the communities such as churches, mosques, civil society organisation
- Meet the person in his/her environment may create better opportunities for trust and respectful meetings that may increase knowledge, attitudes and practice (KAP)

16

Social worker may have access to to communities but..

Tillit mellan människor – inkomstrivd
 Andel (%) Vuxna (20-64 år) som uppger att de har tillit till andra människor i sin närhet, uppdelat efter inkomst (2004-2015).

Belifs and trust

- Who do they trust? Who are you?
- Why should they comply, do they believe in FHM description of illness?
- Previous experiences of health care campaigns?
- Distrust in the biomedical health care system
- Belief system, and indigenous knowledge. How high is vaccinations rates in their home lands? Alternative medicine?

17

Social worker may have access to to communities but..

Resources to comply with Folkhälsomyndighetens recommendations

- What resources do they have to comply to recommendations when their social situation is difficult?

Poor, live in overcrowding flats.

Have low paid jobs with unsecure strategies for protection.

Jobs they still need to go to despite fear of covid.

Must use public transport

How to alleviate that situation? Politics.

Problem

“ We are not part of society...” – “and social services the least we want contact with”

18

Alternative ways to reach vulnerable groups:
civil society organisations
churches and mosques

For many immigrants, undocumented people and poor Swedes they often feel more trust in the civil societys actors that the Swedish institutions

NGO, churches, mosques

Food and clothing, daily nececities

Level of help seeking low, low health literacy and fear of police (UM)

Vaccinations not prime task in their daily life. And who dare to come to the clinic? Constant struggel with own trauma more in focus.

Housing? Some that cant comply to rules and regulations in Soc Services, hence they ask for help in here. Many don't want anything with "the system" to do.

The right to social support § 11 and the right to health and 12

19

To be continued...

- Thanks for the attention
