1 Introduction

1.1 The Quality of Government Institute

The QoG Institute was founded in 2004 by Professor Bo Rothstein and Professor Sören Holmberg. It is an independent research institute within the Department of Political Science at the University of Gothenburg. The institute conducts research on the causes, consequences and nature of Good Governance and the Quality of Government (QoG) - that is, trustworthy, reliable, impartial, uncorrupted, and competent government institutions.

The main objective of the research is to address the theoretical and empirical problems of how political institutions of high quality can be created and maintained. The second objective is to study the effects of Quality of Government on a number of policy areas, such as health, environment, social policy, and poverty. While Quality of Government is the common intellectual focal point of the research institute, a variety of theoretical and methodological perspectives are applied.

1.2 The QoG Data

One aim of the QoG Institute is to make comparative data on QoG and its correlates publicly available. To accomplish this, we have compiled several datasets that draw on a number of freely available data sources, including aggregated individual-level data. The QoG datasets are available in several file formats, making them usable in most statistical softwares as well as in Excel.

The QoG Standard Dataset is our largest dataset consisting of more than 2,000 variables. For those who prefer a smaller dataset, we provide the QoG Basic Dataset, consisting of approximately the 300 most used variables from the QoG Standard Dataset. We also provide a dataset called the QoG OECD Dataset which covers OECD member countries and has high data coverage in terms of geography and time.

The Standard, Basic, and OECD datasets are all available in both time-series (TS) and cross-sectional (CS) versions, as separate datasets. In the TS datasets, the unit of analysis is country-year (e.g. Sweden-1984, Sweden-1985 and so on). The CS datasets, unlike the TS datasets, do not include multiple years for a particular country, therefore, the unit of analysis is country. Although, many of the variables are available in both TS and CS, some variables are not, so it is advisable to use the codebook to see which variables are included. Each variable entry in this codebook specifies in which dataset you will find the variable.

The variables in the Standard, Basic, and OECD datasets are categorized in 19 thematic categories. This categorization should be seen as a guideline rather than a definite classification. Most variables belong only to one category, but some variables belong to more than one category.

On the QoG website, we also provide three additional datasets. The QoG Expert Survey (2012, 2015 and 2020), the QoG EU Regional Dataset (2016 and 2020) and the QoG EQI Dataset (2010, 2013, 2017 and 2021). The QoG Expert Survey is a dataset based on a survey among experts on public administration around the world. The data is available in an individual dataset and an aggregated dataset. The QoG EU Regional dataset is a dataset consisting of approximately 450 variables covering three levels of European regions. The EQI dataset is based on a survey among 34,000 respondents and concerns corruption on a regional level within the EU (NUTS 2).

Previous versions of all our datasets are available in the Data Archive on the QoG website:

<https://www.gu.se/en/quality-government/qog-data/data-downloads/data-archive>

1.3 Important note on the terms of use of these datasets

The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful the original data sources are the only owners of their data and they can adjust their license without previous warning.

1.4 QoG Standard Dataset

1.4.1 Cross-Sectional (CS)

In the QoG Standard CS dataset, data from and around 2019 is included. Data from 2019 is prioritized, however, if no data are available for a country for 2019, data for 2020 is included. If no data for 2020 exists, data for 2018 is included, and so on up to a maximum of +/- 3 years.

While this works fine for some variables, it does not for others. For GDP growth it might be far from ideal to use figures from the following or previous year, whereas it might be more or less unproblematic for bureaucratic structures, which are more stable and fluctuate less. We advise you to carefully read the codebook and use your own judgment when using the CS dataset.

Besides the quality criteria for including new datasets and variables into the QoG datasets, we have chosen to add a few rules regarding the number of countries and years a variable must have available in order to be included in these datasets. This also might mean that the original dataset may include other variables, and we urge the users of these datasets to check the original sources as well. For the QoG Standard CS dataset, we drop variables that have information for less than 15 countries after we have picked the data from the focus year or +/- 3 years.

In the description of each variable in this codebook, there are basic descriptive statistics (minimum year, maximum year and number of countries $[N]$) and a map indicating the countries that have data for that specific variable in the CS dataset. If the variable is not included in the CS dataset, there is a text simply stating that this is the case. The maps in the codebook should not be confused for visualizations of the data itself; they are only visualizations of the data availability in the dataset.

1.4.2 Time-Series (TS)

In the QoG Standard TS dataset, data from 1946 to 2022 are included and the unit of analysis is country-year (e.g. Sweden-1946, Sweden-1947 and so on).

As countries are not static phenomena, this has resulted in a number of what we call *historical countries*. Historical countries are in most cases denoted by a parenthesis, following the country name, and within the parenthesis we have added the to - date (e.g. Ethiopia [-1992]). Consequentially, the historical countries are often associated with a present-day version of the "same" country. These are also denoted by a parenthesis but within that parenthesis we have added the from - date (e.g. Ethiopia [1993-]). You will find more information on which countries this applies to, and our line of reasoning for each country, in the section on countries and time coverage.

We have decided not to include data that was available for a country before that country became independent according to our judgment. This is debatable; it might be argued that if an original source has included values, the values are correct and could be included. However, we have reasoned that if the datasets primarily are used in cross-country comparisons, all units should be independent countries and not, for example, semi-independent territories.

Besides the quality criteria for including new datasets and variables into the QoG datasets, we have chosen to add a few rules regarding the number of countries and years a variable must have available in order to be included in these datasets. This also might mean that the original dataset may include other variables, and we urge the users of these datasets to check the original sources as well. Regarding the inclusion of variables according to the countries and years covered, for the QoG Standard TS dataset, we drop variables that have information for less than 15 countries and less than three years.

In each entry in this codebook there are basic descriptive statistics (minimum year, maximum year, number of countries $[N]$, number of observations $[n]$, average number of countries per year $[\bar{N}]$ and average number of years per country $[\bar{T}]$) and a bar graph indicating the number of countries with data available each year from 1946 to 2021. If the variable is not included in the TS dataset, there

is a text simply stating that this is the case. The maps in the codebook should not be confused for visualizations of the data itself; they are only visualizations of the data availability in the datasets.

1.4.3 Country and Time Coverage

When deciding which countries to include in the datasets, we have relied on the following reasoning:

We have included current members of the United Nations (UN) as well as previous members, provided that their de facto sovereignty has not changed substantially since they were members; this means that we, for example, have included Taiwan.

Using UN membership to decide whether or not to include a country in the dataset works quite well for cases from around 1955. Afterwards, independent states, in general, joined the UN following independence. This leaves us with the question of what to do with countries that might be said to have been independent some time during the period from 1946 to around 1955, but were not independent after that period (such as Tibet). We have decided to include data for Tibet from 1946 to 1950, making it possible for users to decide for themselves whether to include Tibet in their analysis or not. It is worth noting that we do not use the date on which a country gained membership to the UN to decide when a country came into being. All in all, this means that we have 194 countries included in the cross-sectional dataset.

In the time-series dataset, we include the same 194 countries, plus an additional 17 historical countries that did not exist in 2014: Tibet, Pakistan pre-1971 (including East Pakistan, presently Bangladesh), North and South Vietnam, North and South Yemen, East and West Germany, Yugoslavia pre-1992 (the Peoples Republic of Yugoslavia), Serbia and Montenegro, the USSR, Czechoslovakia, Ethiopia pre-1993 (including Eritrea), France pre-1962 (including Algeria), Malaysia pre-1965 (including Singapore), Cyprus pre-1974 (including the later Turkish-occupied North Cyprus) and Sudan pre-2012 (including South Sudan). This makes a total of 211 countries. In the Appendix we have included the full list of countries and a short note on how we have reasoned for each country.

Unfortunately, no established international standard exists on how historical cases, resulting either from country mergers or country splits, should be treated in a time-series setting. We have applied the following principles:

After a merger of two countries, the new country is considered a new case, even when the new state formed could be considered a continuation of one of the merged states. This rule applies to: (1) Vietnam, which merged North and South Vietnam in 1976; (2) Yemen, which merged North and South Yemen in 1990; and (3) Germany, which merged East and West Germany in 1990.

If a country has split, the new countries are considered new cases, even when one of the new states could be considered a continuation of the state that split. This rule applies to: (1) Pakistan, which split into Pakistan and Bangladesh in 1971; (2) the USSR, which split into 15 Post-Soviet countries in 1991; (3) Yugoslavia, which split into Slovenia, Croatia, Bosnia and Herzegovina, North Macedonia, and Serbia and Montenegro from 1991 onwards; (4) Czechoslovakia, which was split into the Czech Republic and Slovakia in 1993; (5) France, which split into France and Algeria in 1962; (6) Malaysia, which split into Malaysia and Singapore in 1965; (7) Cyprus, which was occupied by Turkey in 1974, effectively splitting the country into Cyprus and the internationally unrecognized Northern Cyprus; and (8) Ethiopia, which split into Ethiopia and Eritrea in 1993. There is one exception to this rule: Indonesia is considered a continuation of the country that existed before the independence of Timor-Leste in 2002 (while Timor-Leste is considered a new country).

Since most of the original data sources treat these cases of country mergers and splits differently, we have rearranged data in accordance with our criteria above. Consequently, if a merger or a split has occurred and the data source does not treat the countries as different cases, we still consider them to be different cases.

To determine where to put the data for the year of the merger/split and when to include data for a newly independent country, we have relied on the July 1st-principle. If the merger/split or

independence occurred after July 1st, the data for this year will belong to the historical country or it will not be included.

Thus, for example: If Germany in a data source is treated as a continuation of West Germany, we place data up to and including 1990 on West Germany and leave Germany blank until and including 1990, since the merger of Germany occurred in October 1990 (after July 1st, 1990). If, on the other hand, Serbia and Montenegro in a data source is treated as a continuation of Yugoslavia, we place the data up to and including 1991 on Yugoslavia and from 1992 and onward on Serbia and Montenegro (which is left blank until and including 1991), since the split occurred from June 1991-March 1992 (before July 1st, 1992).

Finally, Cyprus (1974-) denotes the Greek part of the island after the Turkish occupation. Most sources probably do the same with the data they refer to Cyprus, but the documentation of the original data rarely specifies this.

In 2018, we updated the name of Swaziland to Eswatini (former Swaziland) and in 2019, we updated the name of Macedonia to North Macedonia; however, the other identification codes remain the same.

1.4.4 Note for Stata/IC Users

The Stata/IC has a limitation of 2 047 variables. The QoG Standard datasets are larger, therefore users of the Stata/IC cannot use these datasets in its original form. If you have access to Stata/IC, you can open only those variables of the QoG Standard dataset that you need for studies.

First, you need to download the QoG Standard data file in .dta format to your computer. Then, open Stata/IC and write the following command in the command window and run it:

```
use list of variables using "C:\Link\to\file\filename.dta"
```

list of variables can be any of the following:

- list of all variable names (e.g. aid_cpnc fh_status vi_ext) that you need
- the prefixes of the data sources (e.g. bl_*, ciri_*) to open all variables from one or several data sources
- a range of variables (e.g. aid_cpnc-vi_ext).

Note: A list of the prefixes and variable names are presented in the codebook. We recommend that you always add and open the identification variables: cname, ccode and year (for time-series).

1.4.5 A brief note on the QoG Standard 2023 update

To improve consistency and compatibility of statistical data related to QoG, we continuously work to improve the coverage and data quality. For the 2023 update of the QoG Standard Dataset, we have included five new data sources that previously were not part of the QoG datasets. These are:

- Quota Adoption and Reform over Time (QAROT), 1947-2015 (Hughes, Paxton, Clayton & Zetteberg, 2017). This dataset is the first longitudinal dataset with information about the adoption, implementation, and reform of national gender quotas across the world.
- Change in Source of Leader Support (CHISOLS) Data (Mattes, Leeds & Matsumura, 2016). The goal of this dataset is to differentiate leader transitions in which a new leader comes to office who depends on different societal groups for support than their predecessor from leader transitions where both the current leader and their predecessor rely on essentially the same groups for support.

- Global Data Governance Map (Struett, Zable & Aaronson, 2022). This dataset focused on how governments around the world govern data on six different attributes: strategic, regulatory, responsible, structural, participatory and international.
- Informal Economy Database (Elgin, Kose, Ohnsorge & Yu, 2021). This database includes up to 196 economies over the period 1990-2018 and includes the twelve most commonly used measures of informal economy.
- Global Tax Expenditures Database (Redonda, von Haldenwang & Aliu, 2022). This dataset brings together the official and publicly available data on tax expenditures, as published by national governments since 1990.
- Historical Index of Ethnic Fractionalization (Drazanova, 2019). The HIEF Data contains an ethnic fractionalization index for 165 countries across all continents. The dataset covers annually the period 1945-2013.
- Multidimensional Index of Bureaucratic Underrepresentation (Cingolani, 2022). This dataset presents a time-series cross-sectional Index of Bureaucratic Underrepresentation (IBU) covering a total of 37 European countries between 2008 and 2018.
- Enterprise Surveys (The World Bank, 2022). The World Bank Enterprise Surveys offer an expansive array of economic data on 180,000 firms in 154 countries.
- WJP Rule of Law Index 2022 (World Justice Project, 2022). This dataset measures how the rule of law is experienced and perceived in practical, everyday situations by the general public around the world.
- The World Uncertainty Index (Ahir, Bloom & Furceri, 2022). The WUI dataset reflects the frequency of the word uncertainty in the quarterly Economist Intelligence Unit country reports.
- The GenDip database on Gender and Diplomatic Representation (Niklasson & Towns, 2022). The purpose of this dataset is to provide information on the gender of diplomats around the world.
- The Data on Central Bank Independence (Romelli, 2022). This dataset provides information on a comprehensive index of CBI covering a wide range of central bank characteristics based on the charters of 154 central banks, over the period 1972–2017.

1.5 Changes in this edition

For this edition of the dataset, we had the following changes:

Changes in variables:

- The World Development Indicators GDP variables with a reference to a particular year have been updated from 2010 to 2015.

Changes in datasets:

- The Freedom on the Net dataset is now presented by Freedom House as a single time-series file. QoG Data previously would merge the different versions together. This new unique file has some differences in values compared to previous iterations.
- The World Health Organization's Global Health Observatory data repository no longer contains the variable "Prevalence of smoking tobacco products in adults(%)". From this repository, we have added the variable "Anaemia prevalence in pregnant women" (who_anpreg).
- Eurostat has dropped the variable "GDP at current market prices, Million PPS" (QoG code: eu_eco2gdpmiopp), therefore, we have also dropped this variable.
- We have added Colombia and Costa Rica to the OECD compilation datasets, as they have both been accepted as OECD members.
- The following datasets have been removed from this year's compilations: Index of Public Integrity (Mungiu-Pippidi et al.), The Quality of Government (La Porta et al.), Democracy Time-Series (Norris), The Economic Effect of Constitutions (Persson & Tabellini), the Ethnolinguistic Fractionalization (ELF) Indices (Roeder), Level of Shadow Economy (Elgin & Oztunali), Comparative Political Parties Dataset (Swank) and Freedom Rising (Welzel).

Acknowledgements

We would like to thank Rasha Khoury and Anna-Maria Kovalicka their invaluable help in the production of these codebooks.

2 List of Variables by Category

2.1 Bureaucratic Structure

Multidimensional Index of Bureaucratic Underrepresentation	1111
Entry at the lowest level only	1167
Entry via examination	1168
Special Laws	1169
Closedness Index	1169
Political Interference	1170
Political Interference, lower limit of 95% credible interval	1171
Impartiality	1172
Impartiality, lower limit of 95% credible interval	1173
Impartiality, upper limit of 95% credible interval	1173
Patronage	1174
Patronage, lower limit of 95% credible interval	1175
Patronage, upper limit of 95% credible interval	1175
Merit	1176
Merit, lower limit of 95% credible interval	1177
Merit, upper limit of 95% credible interval	1177
Tenure	1178
Tenure, lower limit of 95% credible interval	1179
Tenure, upper limit of 95% credible interval	1179
Professionalism Index	1180

2.2 Civil Society/Population/Culture

Ethnic Fractionalization in the year 2000	767
Language Fractionalization in the year 2000	768
Religion Fractionalization in the year 2000	769
Associational/Assembly Rights	136
Conflict Intensity	140
Civil Society Participation	142
Civil Society Traditions	143
Equal Opportunity	145
Interest Groups	152
Political Participation	159
Political and Social Integration	162
Social Capital	163
Socio-Economic Barriers	165
State Identity	166
Right to Marry in Constitution	231
Right to Same-Sex Marriages in Constitution	231
Freedom of Assembly and Association	1258

Deaths - Female	567
Deaths - Male	568
Deaths - Total	568
Fertility rate, Total	569

Natural change of population	570
Total population change	570
Live births - Female	571
Live births - Male	572
Live births - Total	572
Mean age of woman at childbirth	573
Life expectancy in age < 1 year, Female	574
Life expectancy in age < 1 year, Male	574
Life expectancy in age < 1 year, Total	575
Internet use: internet banking	645
Internet use: civic or political participation	646
Internet use: participating in social networks	647
Internet use: selling goods or services	648
Internet use: never	648
Severe material deprivation rate (Total)	650
% of people under 60(y) living in households w. very low work intensity	652
Cultural Diversity	552
Ethnic Fractionalization	553
Largest Minority	554
Plurality Group	554
Feel personally obliged to report corruption: Agree (% respondents)	852
Feel personally obliged to report corruption: Disagree (% respondents)	852
Can people fight against corruption: agree (% respondents)	868
Can people fight against corruption: disagree (% respondents)	868
Corruption Perception: NGOs	872
Is it socially acceptable to report corruption: agree (% respondents)	877
Is it socially acceptable to report corruption: disagree (% respondents)	878
Would spend a whole day in court to give evidence: agree (% respondents)	878
Would spend a whole day in court to give evidence: disagree (% respondents)	879
Overall Global Gender Gap Index	1295
Population (in the 1000's)	737
Global Peace Index	926
Safety and Security	928
Historical Index of Ethnic Fractionalization	947
Perceived Electoral Integrity Index	941
Satisfaction with Democracy Index	942
Social Trust Index	942
Support for Democracy Index	943
Gender Component for Participation, Rights and Inclusion Category	977
Rural Sector	984
Children Living in Single-Mother Families (%)	1084
Population growth rates	303
Population levels	303
Foreign-born population	362
Population (in millions)	1149
Cinema expenditure per capita (in local currency)	1343
Screen per capita (per 100,000 inhabitants)	1353
Women political empowerment index	1394
Birth rate, crude (per 1,000 people)	1417
Completeness of birth registration (%)	1418
Completeness of birth registration, rural (%)	1418
Completeness of birth registration, urban (%)	1419
Births attended by skilled health staff (% of total)	1420
Death rate, crude (per 1,000 people)	1424
Completeness of death registration with cause-of-death information (%)	1425
Fertility rate, total (births per woman)	1465
CPIA gender equality rating	1477
Life expectancy at birth, total (years)	1528

Life expectancy at birth, female (years)	1529
Life expectancy at birth, male (years)	1529
Mortality rate, adult, female (per 1,000 female adults)	1536
Mortality rate, infant (per 1,000 live births)	1537
Mortality rate, infant, female (per 1,000 live births)	1537
Mortality rate, infant, male (per 1,000 live births)	1538
Mortality rate, adult, male (per 1,000 male adults)	1539
Mortality rate, neonatal (per 1,000 live births)	1539
Mortality rate, under-5 (per 1,000 live births)	1540
Mortality rate, under-5, female (per 1,000 live births)	1541
Mortality rate, under-5, male (per 1,000 live births)	1541
Population, total	1550
Population ages 0-14 (% of total population)	1551
Population ages 15-64 (% of total population)	1551
Population ages 65 and above (% of total population)	1552
Population living in areas where elevation below 5 mts (% of total pop.)	1553
Population density (people per sq. km of land area)	1553
Population, female (% of total population)	1554
Population growth (annual %)	1555
Rural population (% of total population)	1555
Rural population growth (annual %)	1556
Urban population (% of total population)	1557
Urban population growth (annual %)	1557
Women who were first married by age 15 (% of women ages 20-24)	1593
E-Participation Index	819
Autonomy Index	1040
Justifiable: someone accepting a bribe	1059
Justifiable: cheating on taxes	1060
Post-Materialist index 12-item	1061

3 Identification Variables

3.0.1 ccode Country Code

Numeric country code based on the ISO-3166-1 standard. All the numeric country codes are unique and this is thus the variable best suitable to use when merging files (in combination with year for time-series data). (http://en.wikipedia.org/wiki/ISO_3166-1_numeric)

3.0.2 ccode_qog Country Code QoG

The country code using the QoG standard.

3.0.3 ccodealp 3-letter Country Code

A three-letter country code based on the ISO-3166-1 alpha3 standard. Please note that the ccodealp variable does not uniquely identify all countries.

3.0.4 ccodealp_year 3-letter Country Code and Year

A three-letter country code and year.

3.0.5 ccodecow Country Code COW

Country code from the Correlates of War.

3.0.6 ccodewb Country Code World Bank

Country code from the World Bank. The World Bank bases its alphabetic codes on ISO's.

3.0.7 cname Country Name

The name of the country based in the ISO standard.

3.0.8 cname_qog Country Name QoG

The name of the country using the QoG standard.

3.0.9 cname_year Country Name and Year

Country name and year.

3.0.10 version Version of the Dataset

Version of the QoG dataset.

3.0.11 year Year

Year.

4 Description of Variables by Original Data Source

4.1 Africa Integrity Indicators

Dataset by: Global Integrity

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Global Integrity. (2022). Africa integrity indicators 2014-2022

Dataset found at: <https://www.africaintegrityindicators.org/data>

Last update by original source: 2022-03-22

Date of download: 2022-10-11

The Africa Integrity Indicators (AII) assesses key social, economic, political and anti-corruption mechanisms at the national level in all 54 African countries in two sections: Transparency and Accountability, and Social Development. The Africa Integrity Indicators are scored by in-country researchers following an evidence-based investigation methodology. The resultant data points are then reviewed blindly by a panel of peer reviewers, drawing on the expertise of a mix of in-country experts as well as outside experts.

The Transparency and Accountability indicator is made of sub-indicators in the following categories: rule of law, accountability, elections, public management, civil service integrity, access to information and openness, and social development.

For this version of the QoG Datasets, we have decided to only include the scores for the broader components of Transparency and Accountability, given that the Social Development Indicators are already represented by the Mo Ibrahim Foundation's Index of African Governance.

4.1.1 Accountability sub-index

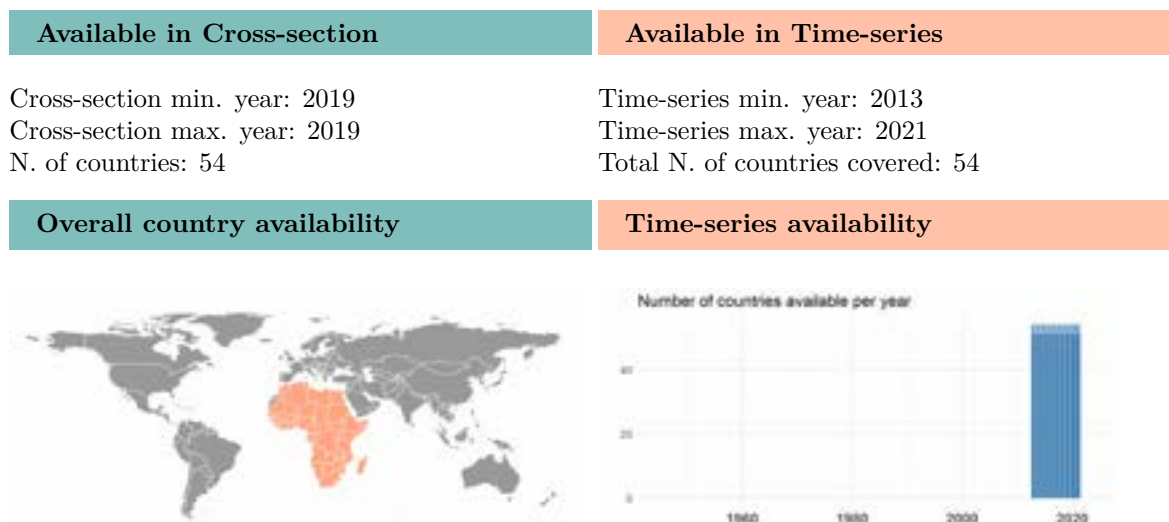

QoG Code: aii_acc

Accountability. This sub index from 0 to 100 is composed of:

1. In law, the independence of the judiciary is guaranteed.
2. In practice, the independence of the judiciary is guaranteed.
3. In practice, national-level judges appointments (justices or magistrates) support the independence of the judiciary.
4. In practice, national-level judges give reasons for their decisions/judgments.
5. In law, there is a supreme audit institution.
6. In law, the independence of the supreme audit institution is guaranteed.
7. In practice, the independence of the supreme audit institution is guaranteed.
8. In practice, appointments to the supreme audit institution support the independence of the agency.

9. In practice, the supreme audit agency releases frequent reports that are accessible to citizens.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.2 Access to Information and Openness sub-index

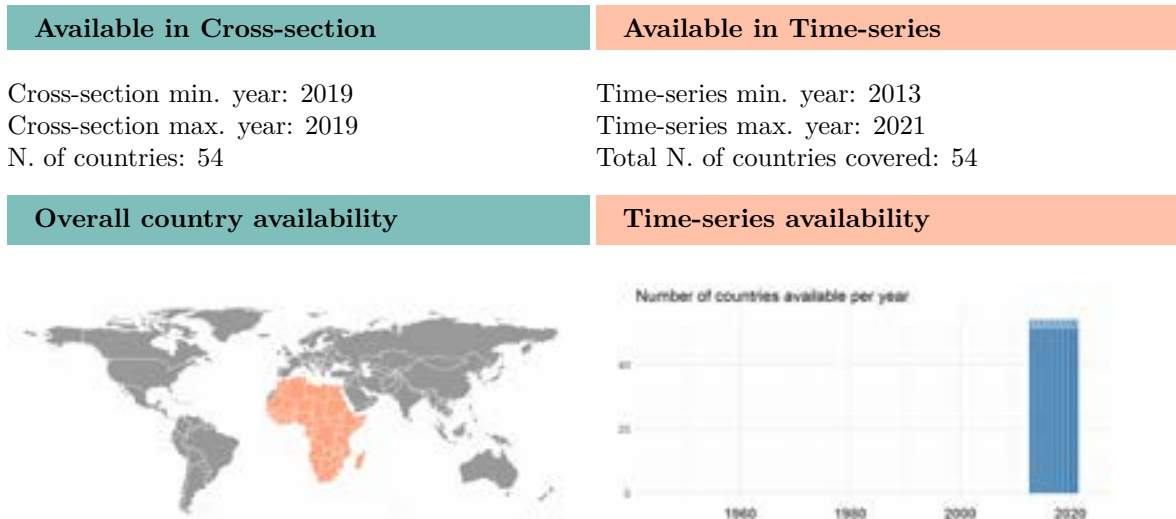

QoG Code: aii_aio

Access to Information and Openness. This sub-index from 0 to 100 is composed of:

10. In law, corruption is criminalized as a specific offense.
11. In law, there is an independent body/bodies mandated to receive and investigate cases of alleged public sector corruption.
12. In practice, allegations of corruption against senior level politicians and/or civil servants of any level are investigated by an independent body.
13. In practice, the body/bodies that investigate/s allegations of public sector corruption is/are effective.
14. In practice, appointments to the body/bodies that investigate/s allegations of public sector corruption support/s the independence of the body.
15. In law, the head of state and government can be investigated and prosecuted while in office if evidence suggests they committed a crime.
16. In practice, heads of state and government are investigated and prosecuted while in office if evidence suggest they committed a crime.
17. In law, there is a mechanism for citizens to report police misconduct or abuse of force.

18. In practice, the mechanism for citizens to report police misconduct or abuse of force is effective.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.3 Civil Service Integrity sub-index

QoG Code: aii_cilser

Civil Service Integrity. This sub index from 0 to 100 is composed of:

19. In law, the independence of the agency/agencies mandated to organize and monitor national elections is guaranteed.
20. In practice, appointments to the agency/agencies mandated to organize and monitor national elections support the independence of the agency/agencies.
21. In practice, the agency/agencies mandated to organize and monitor national elections is/are protected from political interference.
22. In practice, the agency/agencies mandated to organize and monitor national elections make/s timely, publicly available reports before and after a national election.
23. In practice, candidates/political parties have equitable access to state-owned media outlets.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 54	Time-series min. year: 2013 Time-series max. year: 2021 Total N. of countries covered: 54

[Find more information about this variable in the QoG Data Finder](#)

4.1.4 Elections sub-index

QoG Code: aii_elec

Elections. This sub index from 0 to 100 is composed of:

24. In law, major public procurements require competitive bidding.
25. In practice, major public procurements involve competitive bidding.
26. In practice, citizens can access the results and documents associated with procurement contracts (full contract, proposals, execution reports, financial audits, etc.).
27. In law, companies found guilty of violations of procurement regulations are prohibited from participating in future bids.
28. In practice, companies found guilty of violating procurement regulations are prohibited from participating in future bids.
29. In practice, citizens can access the financial records of state-owned companies.
30. In practice, citizens can access the financial records associated with natural resources exploitation (gas, oil and mining), whether they involve the participation of public or private corporations.
31. In practice, significant public expenditure receives legislative approval on an annual basis.
32. In law, both the executive's budget proposal and the approved budget must be published in full every year.
33. In practice, a legislative committee exercises oversight of public funds.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 54	Time-series min. year: 2013 Time-series max. year: 2021 Total N. of countries covered: 54

[Find more information about this variable in the QoG Data Finder](#)

4.1.5 Public management sub-index

QoG Code: aii_pubm

Public Management. This sub index from 0 to 100 is composed of:

- 35. In law, civil servants are required to report cases of alleged corruption.
- 36. In law, civil servants who report cases of corruption are protected from recrimination or other negative consequences.
- 37. In law, there are formal rules to prevent conflicts of interest, nepotism, cronyism and patronage in all branches of government.
- 38. In practice, civil servants' work is not compromised by political interference.
- 39. In practice, civil servants are appointed and evaluated according to professional criteria.
- 40. In law, there are restrictions for civil servants entering the private sector after leaving the government.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 54	Time-series min. year: 2013 Time-series max. year: 2021 Total N. of countries covered: 54

[Find more information about this variable in the QoG Data Finder](#)

4.1.6 Law: the independence of the judiciary is guaranteed

QoG Code: aii_q01

Sub-score (0-100). Question no. 1. In law, the independence of the judiciary is guaranteed.

A 100 score is earned where all the following conditions are met:

- 1) the law establishes that the judiciary is independent from the executive and legislative branches, and
- 2) the law establishes the judiciary's right, authority or mandate to review laws, issue judicial decisions, and choose the cases heard by courts.

A 0 score is earned where no such law exists, or a law exists but it does not include ALL of the elements described in 100.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2017
N. of countries: 54

Available in Time-series

Time-series min. year: 2013
Time-series max. year: 2017
Total N. of countries covered: 54

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.1.7 Practice: the independence of the judiciary is guaranteed

QoG Code: aii_q02

Sub-score (0-100). Question no. 2. In practice, the independence of the judiciary is guaranteed.

A 100 score is earned where all the following conditions are met:

- 1) judges have autonomy to interpret and review existing laws, legislation and policy, and
- 2) judges operate without fear or favor, independent from other branches of government.

A 50 score is earned where any of the following conditions apply:

- 1) judges' autonomy to interpret and review existing laws is occasionally restricted, or
- 2) judges are occasionally subject to negative or positive political incentives (for example, judges are demoted/promoted or relocated to worse/better offices in retaliation/reward for making certain decisions).

A 0 score is earned where at least one of the following conditions apply:

- 1) judges rarely have autonomy to interpret and review existing laws, legislation and policy, or
- 2) judges are routinely subject to negative or positive political incentives (for example, judges are frequently demoted/promoted or relocated to worse/better offices in retaliation/reward for making certain decisions).

4.1.8 Practice: national-level judges support the independence of judiciary

QoG Code: aii_q03

Sub-score (0-100). Question no. 3. In practice, national-level judges appointments (justices or magistrates) support the independence of the judiciary.

A 100 score is earned where all the following conditions are met:

- 1) national-level judges are chosen through a merit-based selection system,
- 2) they have security of tenure, and
- 3) they are disciplined/removed/transferred only through due process by a peer panel/independent oversight body.

A 50 score is earned where any of the following conditions apply:

- 1) national-level judges are occasionally appointed without following a merit-based selection system,
- 2) some judges are denied security of tenure, or
- 3) occasionally judges are disciplined/removed/transferred without due process or the peer panel/independent oversight body occasionally includes representatives of the executive or legislative branches.

A 0 score is earned where at least one of the following conditions apply:

- 1) there's a merit-based selection system but it fails to require basic skills (ex. legal education, litigation experience, etc.) or is so weak that individuals with less merit are usually appointed over those with more merit,
- 2) there is no security of tenure, or
- 3) the due process usually involves the Executive or Legislative branches.

4.1.9 Practice: national-level judges give reasons for their decisions

QoG Code: aii_q04

Sub-score (0-100). Question no. 4. In practice, national-level judges give reasons for their decisions/judgments.

A 100 score is earned where all the following conditions are met:

- 1) judges routinely provide formal reasoning for their rulings,
- 2) their reasoning references the laws/jurisprudence they considered and the specific interpretation they gave them in relation to the case, and
- 3) their reasoning is public (for this indicator, national security exceptions are allowed).

A 50 score is earned where any of the following conditions apply:

- 1) judges occasionally fail to provide formal reasoning for their decisions,
- 2) the reasoning occasionally lacks references to the laws/jurisprudence considered or the respective judges' interpretations, or
- 3) it takes more than two weeks for citizens to obtain the reasoning after requested.

A 0 score is earned where at least one of the following conditions apply:

- 1) judges rarely provide formal reasoning for their rulings, or
- 2) their reasoning rarely references the laws/jurisprudence they considered and/or the specific interpretations they gave them in relation to the case, or
- 3) the reasoning is not public.

4.1.11 Law: the independence of supreme audit institution is guaranteed

QoG Code: aii_q06

Sub-score (0-100). Question no. 6. In law, the independence of the supreme audit institution is guaranteed.

A 100 score is earned where all the following conditions are met:

- 1) the law establishes that the audit institution is independent from the executive and legislative branches,
- 2) the institution has the right, authority or mandate to audit any government account, issue recommendations and resolutions, and refer cases to the prosecutor's office, and
- 3) the institution has a consistent source of funding to operate.

A 0 score is earned where no such law exists, or a law exists but it doesn't establish ALL of the conditions described in 100.

4.1.12 Practice: the independence of supreme audit institution is guaranteed

QoG Code: aii_q07

Sub-score (0-100). Question no. 7. In practice, the independence of the supreme audit institution is guaranteed.

A 100 score is earned where all the following conditions are met:

- 1) auditors have autonomy to audit accounts,
- 2) auditors operate without fear or favor, independent from other offices of government, and
- 3) they have a predictable source of funding that is consistent from year to year.

A 50 score is earned where any of the following conditions apply:

- 1) auditors usually have autonomy to audit any account but exceptions exist,
- 2) auditors are occasionally subject to negative or positive political incentives (for example, auditors are demoted/promoted or relocated to worse/better offices in retaliation/reward for not auditing/not auditing or issuing favorable/unfavorable resolutions), or
- 3) funding is occasionally inconsistent.

A 0 score is earned where at least one of the following conditions apply:

- 1) auditors rarely have autonomy to audit accounts,
- 2) they routinely operate with fear or favor, dependent of other offices of government, or
- 3) the source of funding is usually inconsistent from year to year.

Type of variable: Continuous

4.1.13 Practice: appointments to audit institution support agency's independence

QoG Code: aii_q08

Sub-score (0-100). Question no. 8. In practice, appointments to the supreme audit institution support the independence of the agency.

A 100 score is earned where all the following conditions are met:

- 1) appointments to positions in the agency follow a merit-based system,
- 2) appointees are free of conflicts of interest due to personal loyalties, family connections, political party affiliations or other biases, and
- 3) auditors are disciplined/removed/transferred only through due process by a peer panel/oversight body.

A 50 score is earned where any of the following conditions apply:

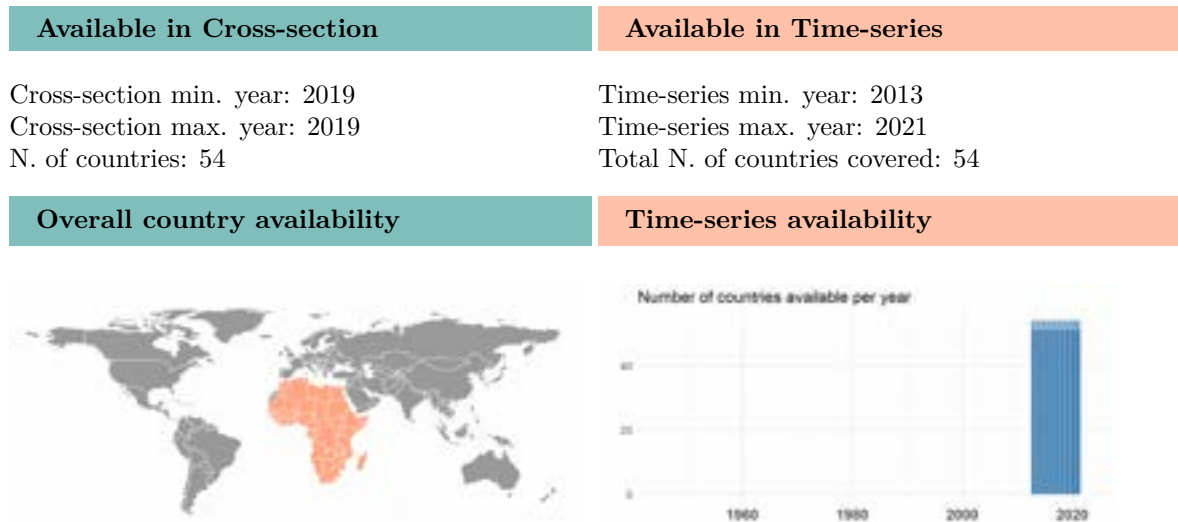

- 1) appointments don't always follow a merit-based system,
- 2) appointees sometimes have conflicts of interest, or
- 3) auditors are sometimes disciplined/removed/transferred without observing due process by a peer panel/oversight body.

A 0 score is earned where at least one of the following conditions apply:

- 1) appointments to positions in the agency rarely or never follow a merit-based system, or the merit-base system is so weak that individuals with less merit are usually appointed over those with more merit,
- 2) appointees usually have conflicts of interest due to personal loyalties, family connections, political party affiliations or other biases, or

3) appointees are usually disciplined/removed/transferred without observing due process by a peer panel/oversight body.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.14 Practice: the supreme audit agency releases frequent reports

QoG Code: aii_q09

Sub-score (0-100). Question no. 9. In practice, the supreme audit agency releases frequent reports that are accessible to citizens.

A 100 score is earned where all the following conditions are met:

- 1) the agency in average publishes 10 reports or more per year, and
- 2) the reports are published less than one month after issued, and
- 3) they are accessible online or on paper within two weeks of requested at photocopying cost.

A 50 score is earned where any of the following conditions apply:

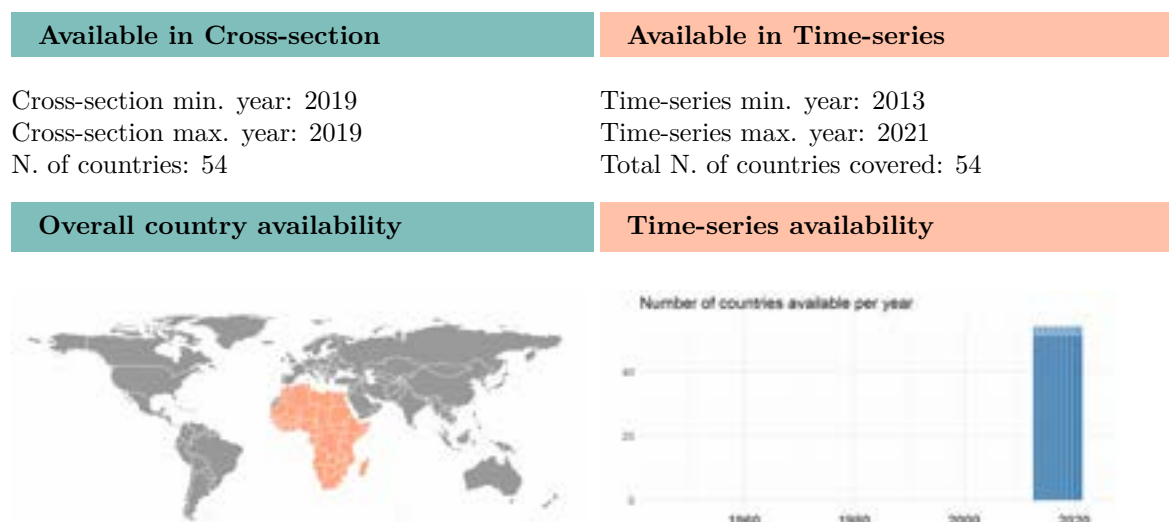

- 1) the agency publishes between three and nine reports per year,
- 2) the reports are published more than one month after issued, or
- 3) they are available on paper but it takes more than two weeks after requested to obtain them or costs are higher than photocopying.

A 0 score is earned where at least one of the following conditions apply:

- 1) the audit institution publishes one or less reports per year, or

2) the reports are not available to citizens.

Type of variable: Continuous

4.1.17 Practice: corruption allegations are investigated by independent body

QoG Code: aii_q12

Sub-score (0-100). Question no. 12. In practice, allegations of corruption against senior level politicians and/or civil servants of any level are investigated by an independent body.

A 100 score is earned where all the following conditions are met:

- 1) allegations against senior level politicians and/or civil servants of any level are investigated, and
- 2) the members of the body mandated to investigate the allegations work without fear or favor from other offices.

A 50 score is earned where any of the following conditions apply:

- 1) not all allegations against senior level politicians and/or civil servants of any level are investigated, or
- 2) the members of the body mandated to investigate the allegations are occasionally subjected to positive/negative incentives to rule in favor/against a senior level politician and/or civil servant.

A 0 score is earned where at least one of the following conditions apply:

- 1) allegations against senior level politicians and/or civil servants of any level are rarely or never investigated, or
- 2) the members of the body mandated to investigate the allegations routinely receive positive/negative incentives to rule in favor/against a senior level politician and/or civil servant.

4.1.18 Practice: bodies investigating pubsector corruption allegations are effective

QoG Code: aii_q13

Sub-score (0-100). Question no. 13. In practice, the body/bodies that investigate/s allegations of public sector corruption is/are effective.

A 100 score is earned where all the following conditions are met:

- 1) the body has a functioning system in place to receive citizens' allegations of public sector corruption,
- 2) it investigates most of the allegations within three months of being reported, and
- 3) it exercises its own initiative to start investigations when/if needed.

A 50 score is earned where any of the following conditions apply:

- 1) the system to receive citizens' allegations may not work for several days at a time,
- 2) not all cases reported are investigated or investigations take more than three months to start, or
- 3) the body rarely or never starts investigations out of its own initiative.

A 0 score is earned where at least one of the following conditions apply:

- 1) there's no system to receive citizens' allegations, or
- 2) cases reported are rarely or never investigated.

4.1.21 Practice: head of state and gov. can be investigated and prosecuted while in office

QoG Code: aii_q16

Sub-score (0-100). Question no. 16. In practice, heads of state and government are investigated and prosecuted while in office if evidence suggest they committed a crime.

A 100 score is earned where all the following conditions are met:

- 1) criminal allegations against heads of state and government are investigated while they are in office,
- 2) heads of state and government are prosecuted when investigations find evidence of possible wrongdoing, and
- 3) legal punishment is imposed if/when they are found guilty.

A 50 score is earned where any of the following conditions apply:

- 1) not all allegations are investigated while they are in office,
- 2) not all investigations that find evidence of criminal activity result in prosecution, or
- 3) not all guilty verdicts result in legal punishment.

A 0 score is earned where at least one of the following conditions apply:

- 1) allegations against heads of state and government are rarely investigated while they are in office,
- 2) criminal evidence rarely results in prosecution, or
- 3) guilty verdicts rarely result in legal punishment.

A 0 also applies if the heads of state and government have immunity, therefore making it impossible in practice to investigate, prosecute or punish them.

4.1.22 Law: there are mechanisms for citizens to report police force misconduct/abuse

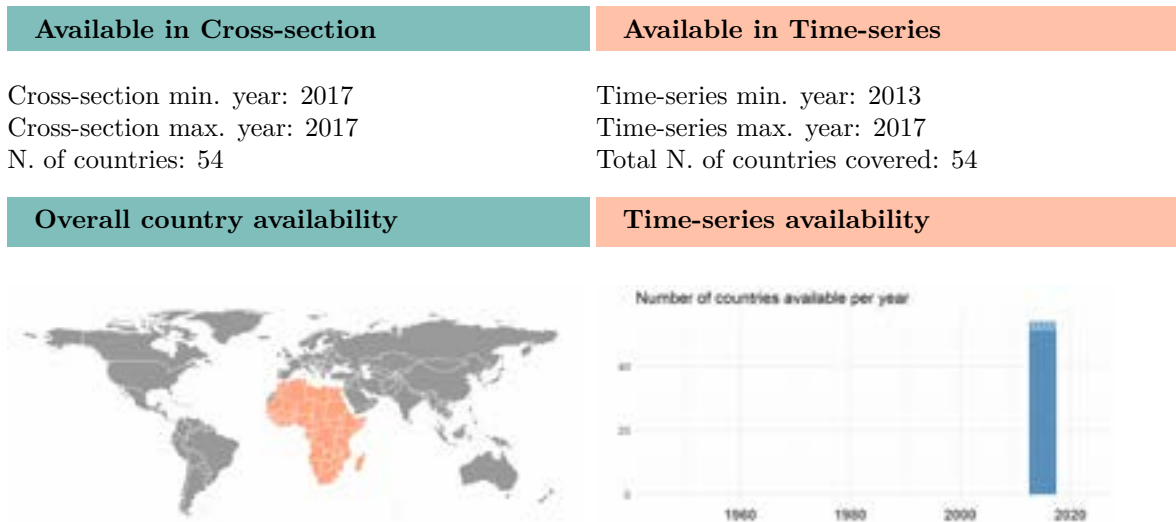

QoG Code: aii_q17

Sub-score (0-100). Question no. 17. In law, there is a mechanism for citizens to report police misconduct or abuse of force.

A 100 score is earned where a law establishes the existence of an oversight body/entity specifically mandated to investigate police misconduct or abuse of force.

A 0 score is earned when no such law exists.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.23 Practice: mechanisms for citizens to report police misconduct/abuse are effect.

QoG Code: aii_q18

Sub-score (0-100). Question no. 18. In practice, the mechanism for citizens to report police misconduct or abuse of force is effective.

A 100 score is earned where all the following conditions are met:

- 1) the body has a functioning system in place to receive citizens' allegations of police misconduct or abuse of force,
- 2) it investigates most of the allegations within one week of being reported, and

3) it exercises its own initiative to start investigations when/if needed.

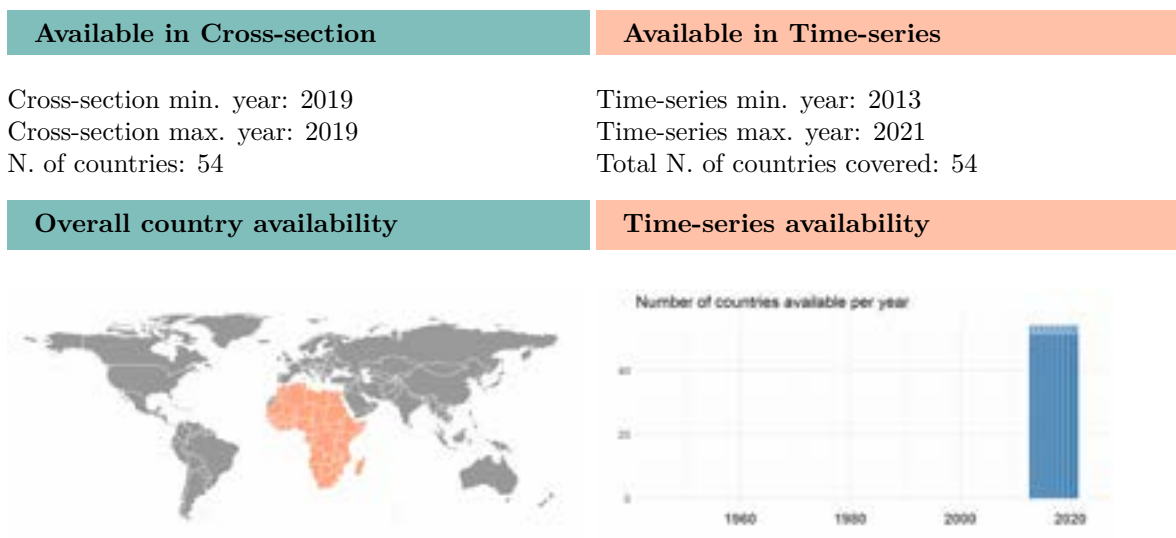

A 50 score is earned where any of the following conditions apply:

- 1) the system to receive citizens' allegations may not work for several days at a time,
- 2) not all cases reported are investigated or investigations take more than one week to start, or
- 3) none or only a minority of the investigations are self-started by the body.

A 0 score is earned where at least one of the following conditions are met:

- 1) there's no system to receive citizens' allegations, or
- 2) cases reported are rarely investigated.

Type of variable: Continuous

4.1.24 Law: independence of agencies that organize & monitor elections is guaranteed

QoG Code: aii_q19

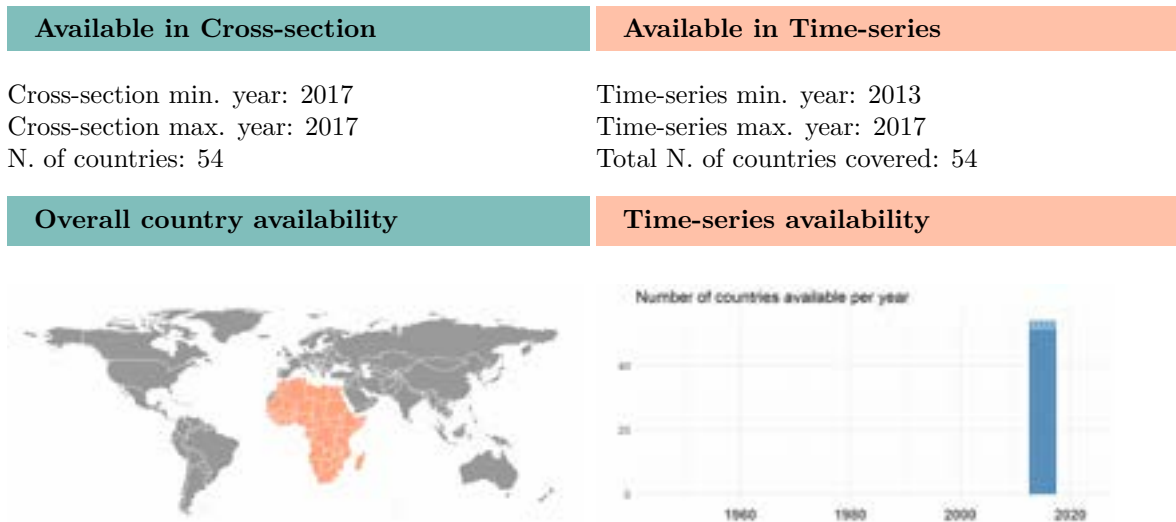

Sub-score (0-100). Question no. 19. In law, the independence of the agency/agencies mandated to organize and monitor national elections is guaranteed.

A 100 score is earned where all the following conditions are met:

- 1) the law establishes that the agency/agencies mandated to organize and monitor national elections is independent from the Executive, Legislative and Judicial branches, and
- 2) it establishes its right, authority or mandate to review elections, issue binding decisions, and choose the cases to be heard by the agency/agencies.

A 0 score is earned where no such law exists, or a law exists but it doesn't include all the conditions described in 100.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.25 Practice: appointees to agencies organizing elections support agencies' independence

QoG Code: aii_q20

Sub-score (0-100). Question no. 20. In practice, appointments to the agency/agencies mandated to organize and monitor national elections support the independence of the agency/agencies.

A 100 score is earned where electoral officials are always chosen through merit-selection systems.

A 50 score is earned where electoral officials are generally chosen through merit-selection systems, but there are exceptions (e.g. sometimes candidates with less merit are selected over those with more merit).

A 0 score is earned where electoral officials are rarely chosen through merit-selection systems, or the selection system is so weak it can't guarantee candidates are appointed based on merit (e.g. no legal education is required, the President has discretion to decide who the top candidates are, etc.).

Type of variable: Continuous

4.1.27 Practice: reports before after a national election are publicly available

QoG Code: aii_q22

Sub-score (0-100). Question no. 22. In practice, the agency/agencies mandated to organize and monitor national elections make/s timely, publicly available reports before and after a national election.

A 100 score is earned where all the following conditions are met:

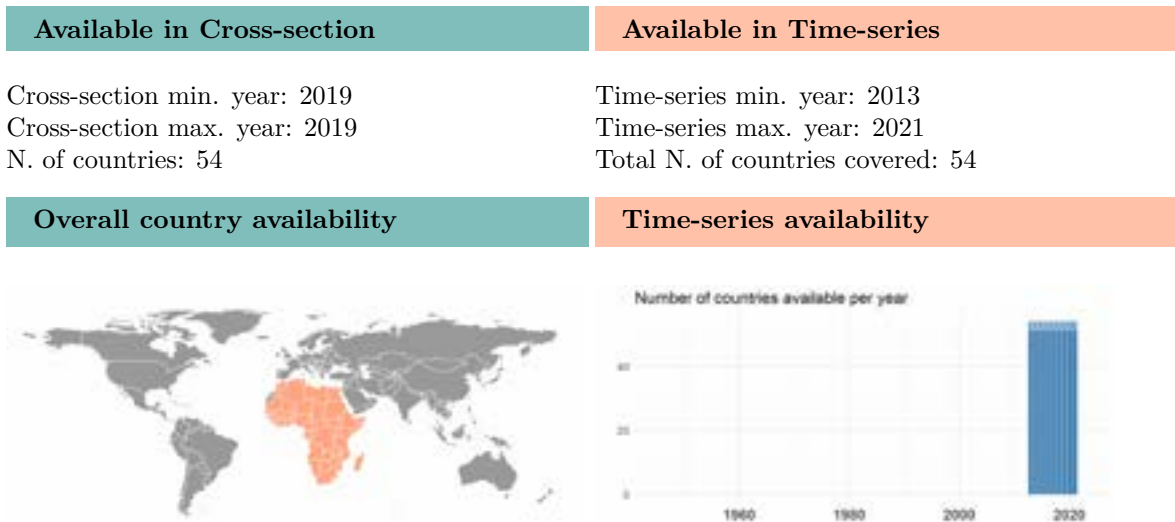

- 1) the agency/agencies publish/es at least one report before the election and one report after the election, and
- 2) the publications are easily accessible to citizens less than one month after issuance online or at cost of photocopying.

A 50 score is earned where any of the following conditions apply:

- 1) the agency only publishes one report before or after the election, or
- 2) the publication is generally accessible to citizens but published more than one month after issued or the cost is higher than photocopying.

A 0 score is earned where no reports about the elections are published or reports are not available to the public.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.28 Practice: candidates/pol. parties have fair access to state-owned media outlets

QoG Code: aii_q23

Sub-score (0-100). Question no. 23. In practice, candidates/political parties have equitable access to state-owned media outlets.

A 100 score is earned where all the following conditions are met:

- 1) candidates/political parties have equal access to and receive fair treatment in state-owned media outlets,
- 2) access is equal in both news reports and editorial commentary, and
- 3) candidates/political parties are offered the same rates for campaign advertising.

A 50 score is earned where any of the following conditions apply:

- 1) some candidates/political parties occasionally have more access to and receive better treatment in state-owned media outlets,
- 2) access is occasionally unequal in either news reports or editorial commentary, or
- 3) occasionally a candidate/political party is offered better rates for campaign advertising.

A 0 score is earned where at least one of the following conditions apply:

- 1) some candidates/political parties usually have more access to and/or receive better treatment in state-owned media outlets,
- 2) access is usually unequal in both news reports or editorial commentary, or
- 3) some candidates/political parties are usually offered better rates for campaign advertising.

4.1.30 Practice: major public procurements involve competitive bidding

QoG Code: aii_q25

Sub-score (0-100). Question no. 25. In practice, major public procurements involve competitive bidding.

A 100 score is earned where all the following conditions are met:

- 1) bids from competing contractors, suppliers, or vendors are invited through open advertising of the scope, specifications, and terms of the proposed contract, and
- 2) the criteria by which the bids are evaluated is available for scrutiny.

A 50 score is earned where any of the following conditions apply:

- 1) bids from competing contractors, suppliers, or vendors are invited through open advertising, but the advertising doesn't leave much time for bidders to prepare their offers or it lacks basic components (scope, specifications, or terms of the proposed contract), or
- 2) the criteria by which the bids are evaluated is not readily available for scrutiny.

A 0 score is earned where at least one of the following conditions apply:

- 1) bids from competing contractors, suppliers, or vendors are rarely or never invited through open advertising of the scope, specifications, and terms of the proposed contract, or
- 2) the criteria by which the bids are to be evaluated is rarely available for scrutiny.

4.1.31 Practice: citizens can access results & procurement contracts related documents

QoG Code: aii_q26

Sub-score (0-100). Question no. 26. In practice, citizens can access the results and documents associated with procurement contracts (full contract, proposals, execution reports, financial audits, etc.).

A 100 score is earned where all the following conditions are met:

- 1) there is an archive containing full records of all procurement contracts, whether in a central government office or at each contracting institution, and
- 2) full records are readily available on or off line for scrutiny by journalists, auditors, competitors and any citizen who request them.

A 50 score is earned where any of the following conditions apply:

- 1) there is an archive but it doesn't contain complete records of all procurement contracts, whether in a central government office or at each contracting institution, and
- 2) full records are not readily available on/off line for scrutiny by journalists, auditors, competing contractors and any citizen who request them.

A 0 score is earned where at least one of the following conditions apply:

- 1) there's no archive containing full records of all procurement contracts, whether in a central government office or at each contracting institution, or
- 2) full records are rarely or never available on/off line for scrutiny by journalists, auditors, competitors or any citizen who request them.

4.1.32 Law: companies guilty of procurement violations can't participate in future bid

QoG Code: aii_q27

Sub-score (0-100). Question no. 27. In law, companies found guilty of violations of procurement regulations are prohibited from participating in future bids.

A 100 score is earned where the law forbids companies found guilty of violating the law (procurement, tax, labor, corruption, etc.) from participating in future bidding in the country, whether indefinitely or for a limited period of time.

A 0 score is earned where no such law exists.

Type of variable: Continuous

Available in Cross-section	Available in Time-series

4.1.33 Practice: companies guilty of violations cannot participate in future bids

QoG Code: aii_q28

Sub-score (0-100). Question no. 28. In practice, companies found guilty of violating procurement regulations are prohibited from participating in future bids

A 100 score is earned where all the following conditions are met:

- 1) companies found guilty of violating the law (procurement, tax, labor, corruption, etc.) are forbidden from participating in future bidding in the country, whether indefinitely or for a limited period of time, and
- 2) there is a registry of companies forbidden from bidding that citizens can access immediately or in less than two weeks upon request. A 100 is also earned if there is a registry in place that at the time of this research is empty because no company has violated the law.

A 50 score is earned where any of the following conditions apply:

- 1) companies found guilty of violating the law (procurement, tax, labor, corruption, etc.) are generally forbidden from participating in future bidding, but there is evidence that some exceptions exist, or
- 2) citizen access to the full list of companies forbidden from participating takes more than two weeks.

A 0 score is earned where at least one of the following conditions apply:

- 1) companies found guilty of violating the law (procurement, tax, labor, corruption, etc.) are rarely forbidden from participating in future bidding, or
- 2) there is no registry of companies forbidden from participating or it exists but it's not public.

4.1.34 Practice: citizens can access the financial records of state-owned companies

QoG Code: aii_q29

Sub-score (0-100). Question no. 29. In practice, citizens can access the financial records of state-owned companies.

A 100 score is earned where all the following conditions are met:

- 1) financial records of state-owned companies are available on/offline to journalists, auditors and citizens at least quarterly, and
- 2) the records can be obtained immediately for free online or on paper in less than two weeks of requested at cost of photocopying.

A 50 score is earned where any of the following conditions apply:

- 1) financial records of state-owned companies are available less than quarterly, or
- 2) obtaining the records takes two weeks to a month, or costs are higher than photocopying.

A 0 score is earned where financial records of state-owned companies are rarely available to the public or don't exist.

4.1.36 Practice: significant public expenditure receives legislative approval yearly

QoG Code: aii_q31

Sub-score (0-100). Question no. 31. In practice, significant public expenditure receives legislative approval on an annual basis.

A 100 score is earned where all the following conditions are met:

- 1) all significant government expenditure is approved by the legislature on an annual basis in open hearings, and
- 2) the legislature makes in-year budget amendments to the government proposed budget.

A 100 score is earned even if defense expenditure is approved in closed hearings.

A 50 score is earned where any of the following conditions apply:

- 1) not all significant government expenditure is approved annually by the legislature or it's not approved in open hearings, or
- 2) the legislature occasionally doesn't approve in-year budget amendments.

A 0 score is earned where at least one of the following conditions applies:

- 1) the legislature rarely approves significant government expenditure, or
- 2) the legislature rarely makes in-year budget amendments to the government proposed budget.

4.1.38 Practice: a legislative committee exercises oversight of public funds

QoG Code: aii_q34

Sub-score (0-100). Question no. 34. In practice, a legislative committee exercises oversight of public funds.

A 100 score is earned where all the following conditions are met:

- 1) there is a functioning oversight committee that goes into session at least weekly, and
- 2) the committee has conducted at least one investigation in the last year (even if the investigation hasn't finished at the time of this research).

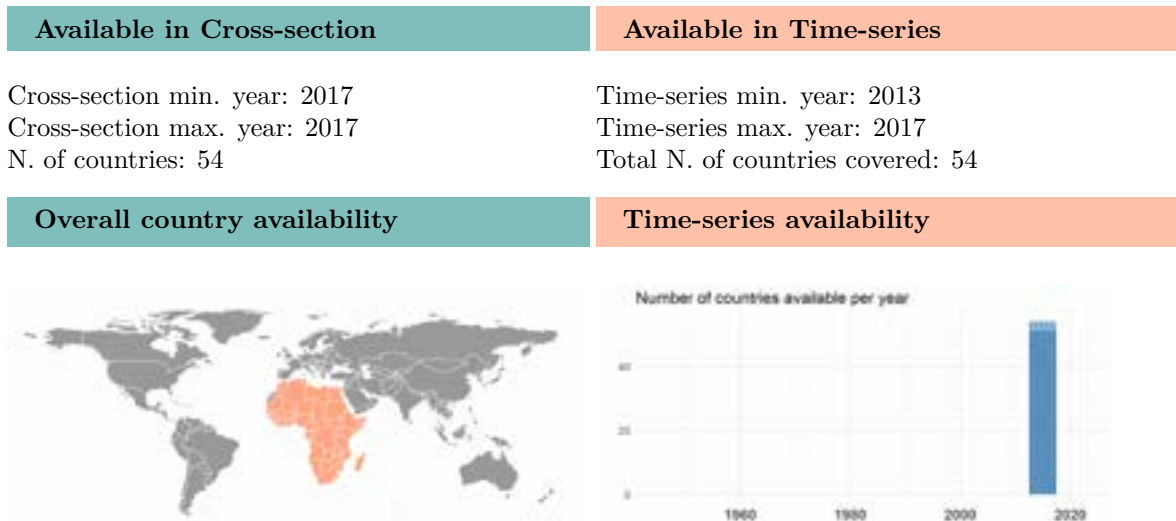

A 50 score is earned where any of the following conditions apply:

- 1) there is a functioning oversight committee but it goes into session at least biweekly, or
- 2) the committee has conducted only one investigation in the last two years.

A 0 score is earned where at least one of the following conditions applies:

- 1) no functioning oversight committee exists or it exists but it meets monthly or less frequently, or
- 2) the committee has not conducted any investigation in the last two years.

Type of variable: Continuous

4.1.41 Law: there are formal rules to prevent conflict of interest, nepotism, etc.

QoG Code: aii_q37

Sub-score (0-100). Question no. 37. In law, there are formal rules to prevent conflicts of interest, nepotism, cronyism and patronage in all branches of government.

A 100 score is earned where at least two of the following three conditions are met:

- 1) the law prohibits conflicts of interest, nepotism, cronyism, and patronage (at least two of these offenses must be prohibited),
- 2) the law applies to all branches of government, including the civil service, and
- 3) it mandates mechanisms such as competitive recruitment and promotion procedures, safeguards against arbitrary disciplinary actions and dismissal, and recusal procedures.

A 0 score is earned where no such law exist. It also scores 0 if only one of the three conditions described in 100 is met.

4.1.42 Practice: civil servants' work is not compromised by political interference

QoG Code: aii_q38

Sub-score (0-100). Question no. 38. In practice, civil servants' work is not compromised by political interference.

A 100 score is earned where all the following conditions are met:

- 1) civil servants are disciplined/removed/transferred only through due process by a peer panel/oversight body, and
- 2) civil servants are not removed when a new administration takes power.

A 50 score is earned where any of the following conditions apply:

- 1) civil servants are occasionally disciplined/removed/transferred without following due process by a peer panel/oversight body, or
- 2) civil servants are occasionally removed when a new administration takes power.

A 0 score is earned where at least one of the following conditions apply:

- 1) the due process is so weak it doesn't protect civil servants (e.g. the members of the panel that conducts the due process have a particular interest in how the issue is decided), or
- 2) civil servants are usually removed when a new administration takes power.

4.1.43 Practice: civil servants are appointed and evaluated according to prof. criteria

QoG Code: aii_q39

Sub-score (0-100). Question no. 39. In practice, civil servants are appointed and evaluated according to professional criteria.

A 100 score is earned where all the following conditions are met:

- 1) appointments to the civil service are made on a merit-based system,
- 2) individuals appointed are free of conflicts of interest due to personal loyalties, family connections, political party affiliations or other biases, and
- 3) performance evaluations are based on standard benchmarks.

A 50 score is earned where any of the following conditions apply:

- 1) not all civil servants are appointed because of their merits,
- 2) not all appointees are free of conflicts or interest, or
- 3) performance evaluations are not always based on standard benchmarks.

A 0 score is earned where at least one of the following conditions apply:

- 1) no merit-based system is in place or it's so weak it's useless,
- 2) civil servants frequently have conflicts of interest, or
- 3) performance evaluations are usually based on personal, discretionary criteria.

4.1.44 Law: there are restrictions for civil servants after entering private sector

QoG Code: aii_q40

Sub-score (0-100). Question no. 40. In law, there are restrictions for civil servants entering the private sector after leaving the government.

A 100 score is earned where the law forbids civil servants to take a position in the private sector for a period of time after leaving government if the position involves any of the following:

- 1) would present a conflict of interest,
- 2) would involve seeking to influence their former government colleagues, or
- 3) would establish a relationship between the former and the new office.

A 0 score is earned if no such law exists.

4.1.45 Law: citizens have a right to request public information from state bodies

QoG Code: aii_q41

Sub-score (0-100). Question no. 41. In law, citizens have a right to request public information from state bodies.

A 100 score is earned where all the following conditions are met:

- 1) a Constitutional principle guarantees citizens' rights to request and receive access to any public documents and information, and
- 2) there is a specific access to information law that establishes the process for this right to be implemented. Note: It's possible to score 100 if national security or individual privacy information is protected, as long as the law defines the parameters and processes to declare what information is protected and they are limited in scope. Just the constitutional protection is not enough to score 100.

A 0 score is earned if there is no such law, or a law exists but it doesn't mandate all the conditions described in 100.

4.1.47 Practice: citizens can access legislative processes and documents

QoG Code: aii_q43

Sub-score (0-100). Question no. 43. In practice, citizens can access legislative processes and documents.

A 100 score is earned where all the following conditions are met:

- 1) legislative records (at least transcripts of debates/votes, roll call vote, and full text of bills) are accessible to the public online or at the cost of photocopying,
- 2) most records are available within a day of legislative proceedings, and
- 3) there is a complete, easily available legislative archive either on or off line.

A 50 score is earned where any of the following conditions apply:

- 1) occasionally legislative records (at least transcripts of debates/votes, roll call vote, and full text of bills) are not accessible to the public online or the cost is higher than photocopying;
- 2) records are usually available within a week of legislative proceedings, or
- 3) citizens have limited access to a legislative archive either on or off line or the archive is not complete.

A 0 score is earned where at least one of the following conditions apply:

- 1) legislative records (at least transcripts of debates/votes, roll call vote, and full text of bills) are rarely accessible to the public online,
- 2) records take more than a week after legislative proceedings to be available, or
- 3) there is no legislative archive or citizens don't have access to it.

4.1.48 Law: senior officials of government are required to disclose records of assets

QoG Code: aii_q44

Sub-score (0-100). Question no. 44. In law, senior officials of the three branches of government (including heads of state and government, ministers, members of Parliament, judges, etc.) are required to disclose records of their assets and disclosures are public.

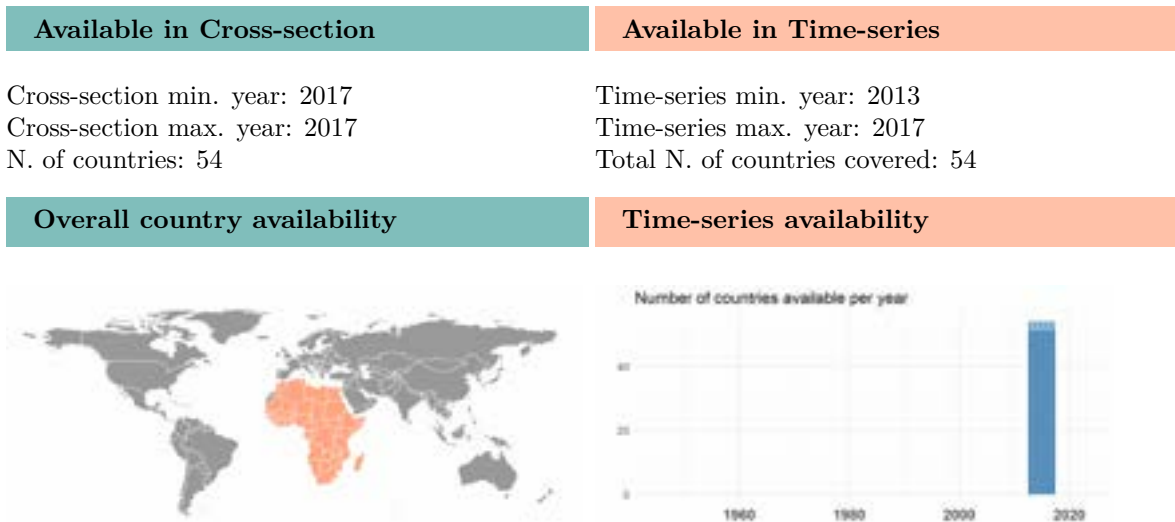

A 100 score is earned where in law all the following conditions are met:

- 1) senior officials of the three branches of government (including heads of state and government, ministers, members of Parliament, judges, etc.) must file asset disclosures,
- 2) disclosures must contain all assets and income belonging to them and their immediate family (including real estate, movable property, cash, salaries, and income from investments), and
- 3) disclosures must be available to the public.

A 0 score is earned where at least one of the following conditions apply:

- 1) no such law exists or it exists but it doesn't apply to all senior officials of the three branches of government,
- 2) the law requires so little information as to render the disclosures useless (e.g. it doesn't require disclosing assets of the immediate family, or requires citing real estate but not movable property, cash, salaries, and income from investments), or
- 3) the law doesn't make the disclosures public.

Type of variable: Continuous

4.1.49 Practice: asset disclosure process of senior officials branches is effective

QoG Code: aii_q45

Sub-score (0-100). Question no. 45. In practice, the asset disclosure process for senior officials of the three branches of government (heads of state and government, ministers, members of Parliament, judges, etc.) is effective.

A 100 score is earned where all the following conditions are met:

- 1) senior officials of the three branches of government file their asset disclosures,
- 2) their disclosures contain detailed information about assets belonging to them and their immediate family (including real estate, movable property, cash, salaries, and income from investments), and
- 3) disclosures are available to the public online or within two weeks of requested at the cost of photocopying.

A 50 score is earned where any of the following conditions apply:

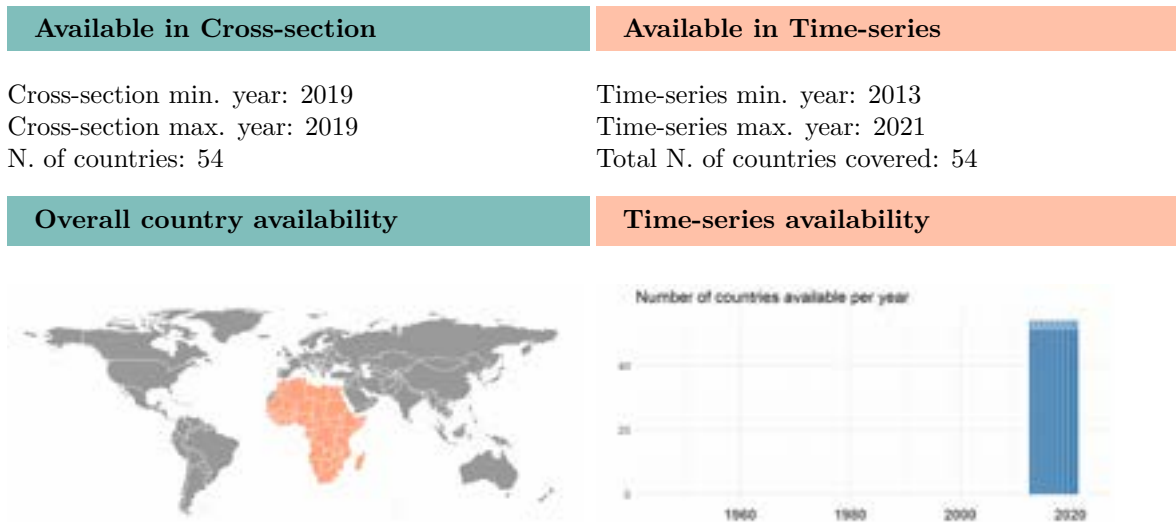

- 1) not all senior officials of the three branches of government file their asset disclosures,
- 2) their disclosures don't contain detailed information about them and their immediate family, or
- 3) disclosures are not always available to the public (they're not online, paper versions take more than two weeks to obtain, or costs are higher than photocopying).

A 0 score is earned where at least one of the following conditions apply:

- 1) senior officials of the three branches of government routinely fail to file asset disclosures,
- 2) asset disclosures contain so little information they are useless (e.g. they don't disclose assets of the immediate family, or cite real estate but not movable property, cash, salaries, and income from investments), or

3) asset disclosures are not available to the public. A 0 score is also earned where no law requires asset disclosures.

Type of variable: Continuous

Sub-score (0-100). Question no. 51. In practice, political parties regularly disclose private donations and the disclosures are easily available to the public.

A 100 score is earned where all the following conditions are met:

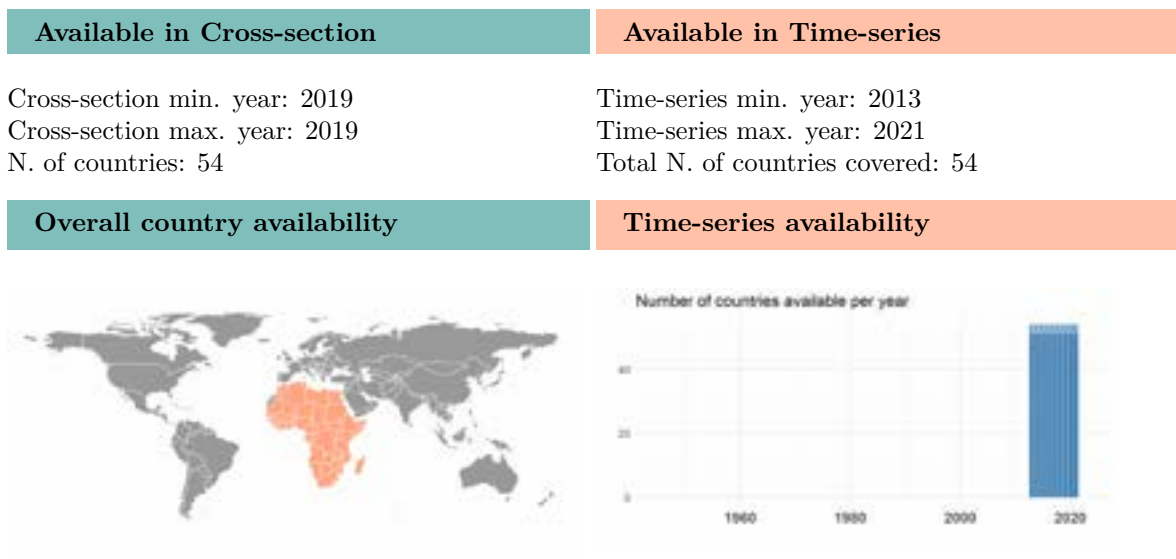

- 1) political parties disclose private donations within a one month of received, and
- 2) they are easily available online or at the cost of photocopy.

A 50 score is earned where any of the following conditions apply:

- 1) political parties don't always disclose private donations or disclose them more than a month of received, or
- 2) disclosures are not available online or the cost of paper versions is higher than photocopying.

A 0 score is earned where political parties rarely disclose private donations.

Type of variable: Continuous

4.1.56 Practice: media organizations disclose their owner's identities to the public

QoG Code: aii_q52

Sub-score (0-100). Question no. 52. In practice, media organizations (print, broadcast, online) disclose the identities of their owners to the public.

A 100 score is earned where all the following conditions are met:

- 1) major media organizations disclose the names of their owners to the public, and
- 2) the information is readily available to any citizen (online, in the newspaper, etc.).

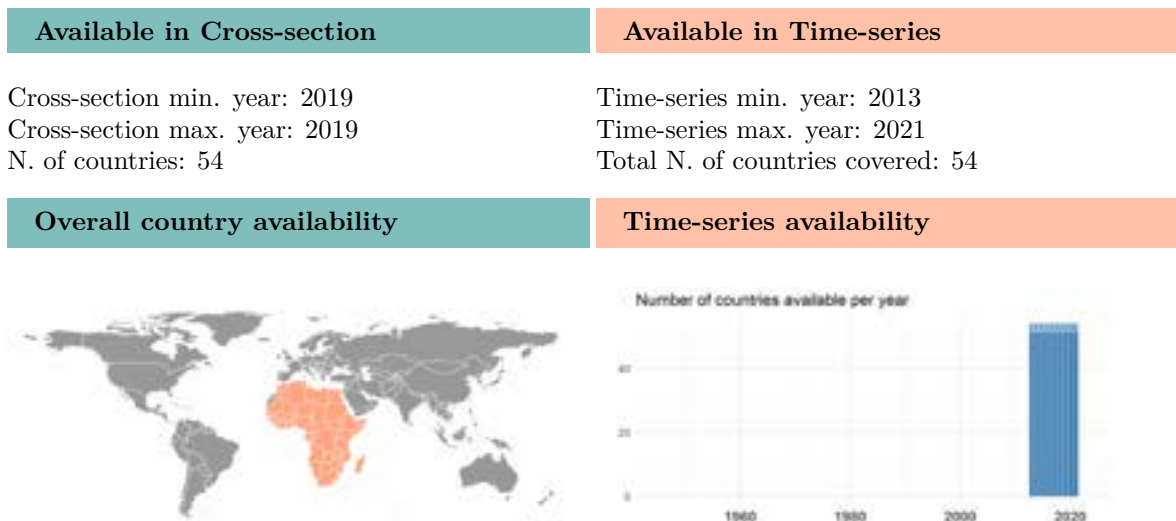

A 50 score is earned where any of the following conditions apply:

- 1) only some major media organizations disclose the name of their owners or they disclose only some of the owners, or
- 2) the information is public but obtaining it takes two weeks or more.

A 0 score is earned where at least one of the following conditions apply:

- 1) major media organizations don't disclose the names of their owners, or
- 2) the information is available only to the government.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.57 Practice: journalists & editors adhere to professional practices in reporting

QoG Code: aii_q53

Sub-score (0-100). Question no. 53. In practice, journalists and editors adhere to strict, professional practices in their reporting.

A 100 score is earned where all the following conditions are met:

- 1) major media organizations have a formal document with standards guiding journalistic work (Code of Ethics, Editorial Guidelines, Statement of Principles, Code of Conduct, etc.),
- 2) the document codifies standards for use of anonymous sources, conflicts of interest, and impartiality, and

3) major media organizations enforce this document.

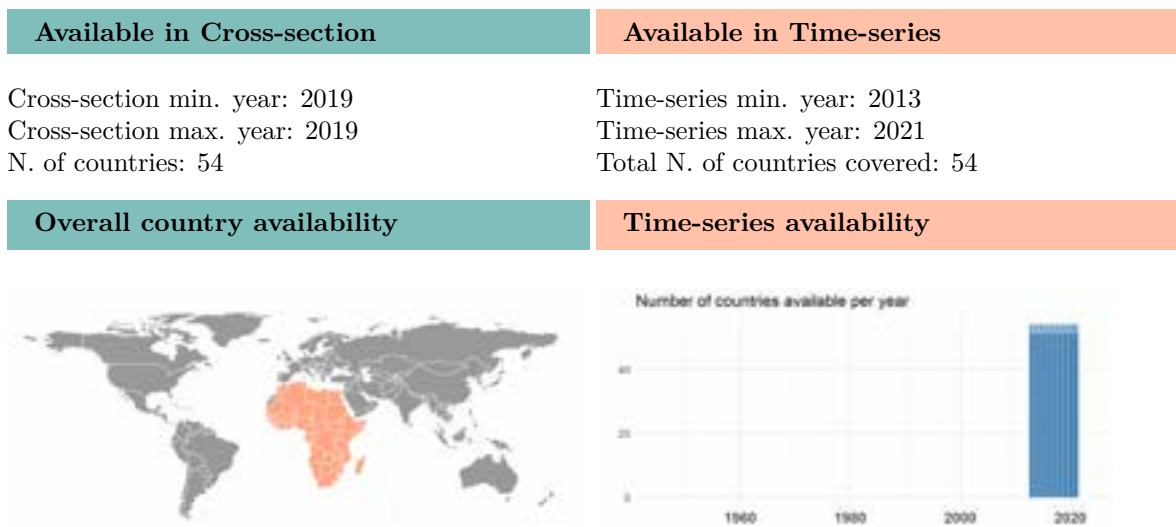

A 50 score is earned where any of the following conditions apply:

- 1) some but not all major media organizations have a formal document,
- 2) the formal document contains only one of the three aspects mentioned in 100 (use of anonymous sources, conflicts of interest, and impartiality), or
- 3) major media organizations enforce this document but some exceptions exist.

A 0 score is earned where at least one of the following conditions apply:

- 1) most major media organizations lack a formal document,
- 2) the formal document is vague and doesn't provide guidance on use of anonymous sources, conflicts of interest, and impartiality, or
- 3) major media organizations rarely or never enforce this document.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.58 Law: it's legal to report accurate news even if it damages pub. figures' reput.

QoG Code: aii_q54

Sub-score (0-100). Question no. 54. In law, it is legal to report accurate news even if it damages the reputation of a public figure.

A 100 score is earned where all the following conditions are met:

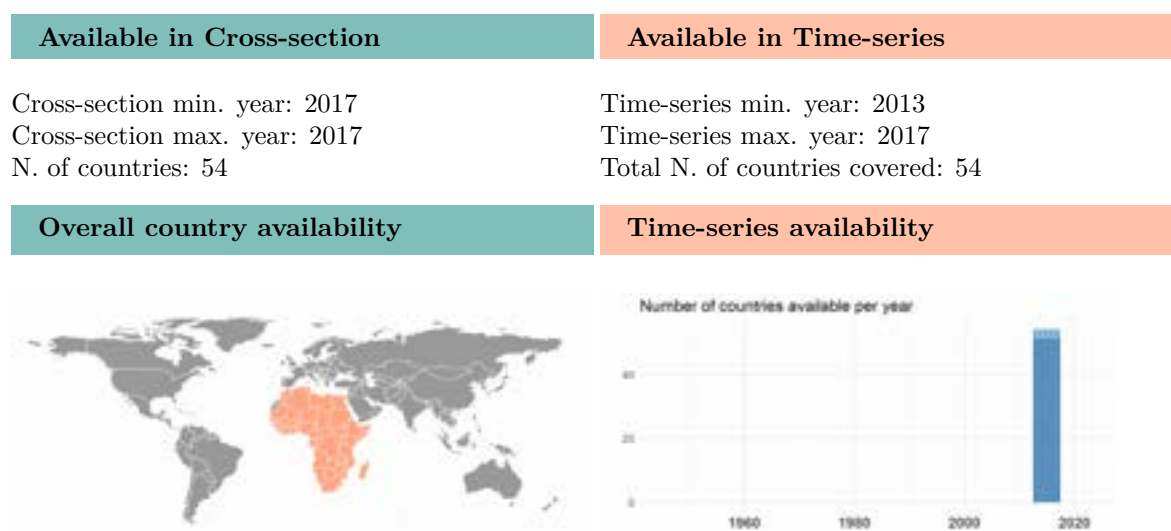

- 1) it is legal to report accurate information on public figures regardless of the damage to their reputations,

2) journalists can only be convicted if malice is proved (a story was published even though the journalist knew it was false or didn't try to verify it).

Note: Public figures include anyone in a position of responsibility in the government or civil service; political leaders; and leaders of civil society organizations, religious groups, trade unions, or large businesses.

A 0 score is earned where no such law exists, or a law exists but it doesn't include all the conditions described in 100. A 0 score is also earned where the law establishes the presumption of bad faith for all comments deemed defamatory and/or the burden of proof falls to journalists.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.59 Practice: the government does not promote the media's self-censorship

QoG Code: aii_q55

Sub-score (0-100). Question no. 55. In practice, there is no prior government restraint (pre-publication censoring) and the government doesn't promote the media's self-censorship.

A 100 score is earned where all the following conditions are met:

- 1) the government never prevents the publication of information, and
- 2) the government doesn't promote the media's self-censorship (e.g. with threats, discrimination in the application of tax laws, government advertising, etc.).

A 50 score is earned where any of the following conditions apply:

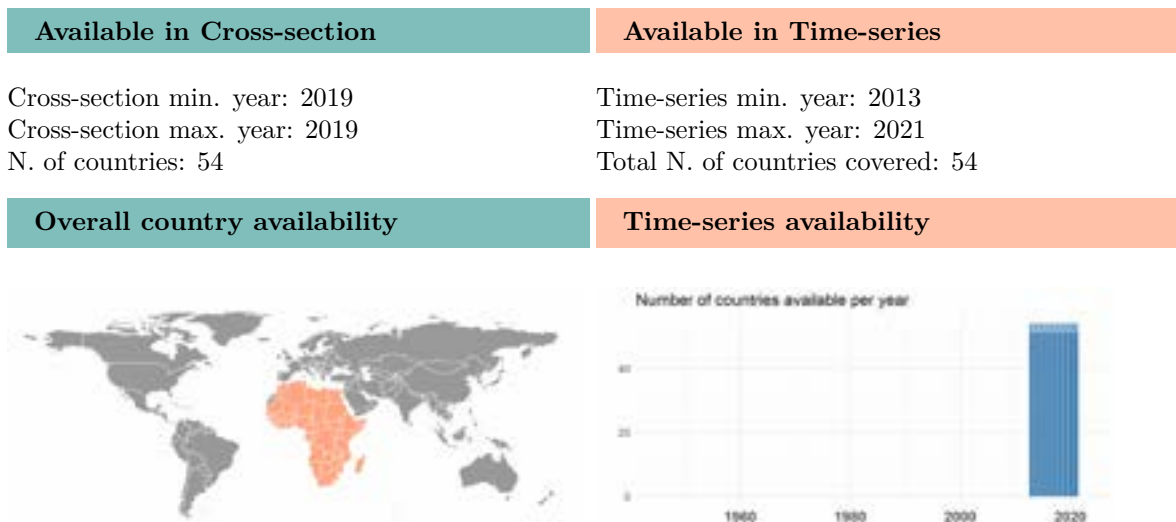

- 1) the government occasionally prevents the publication of information, or
- 2) it occasionally encourages the media to self-censor (e.g. with threats, discrimination in the appli-

cation of tax laws, government advertising, etc.).

A 0 score is earned where at least one of the following conditions apply:

- 1) the government usually prevents the publication of information, or
- 2) it usually encourages the media to self-censor (e.g. with threats, discrimination in the application of tax laws, government advertising, etc.).

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.60 Practice: government doesn't promote the self-censorship of citizens online

QoG Code: aii_q56

Sub-score (0-100). Question no. 56. In practice, there is no prior government restraint (pre-publication censoring) of citizen-created content online and the government doesn't promote the self-censorship of citizens online (in blogs, social media, etc.).

A 100 score is earned where all the following conditions are met:

- 1) the government never prevents the publication online of information by citizens, and
- 2) the government doesn't promote citizen's self-censorship (e.g. with arrests, threats to prosecute, interrogations, etc.).

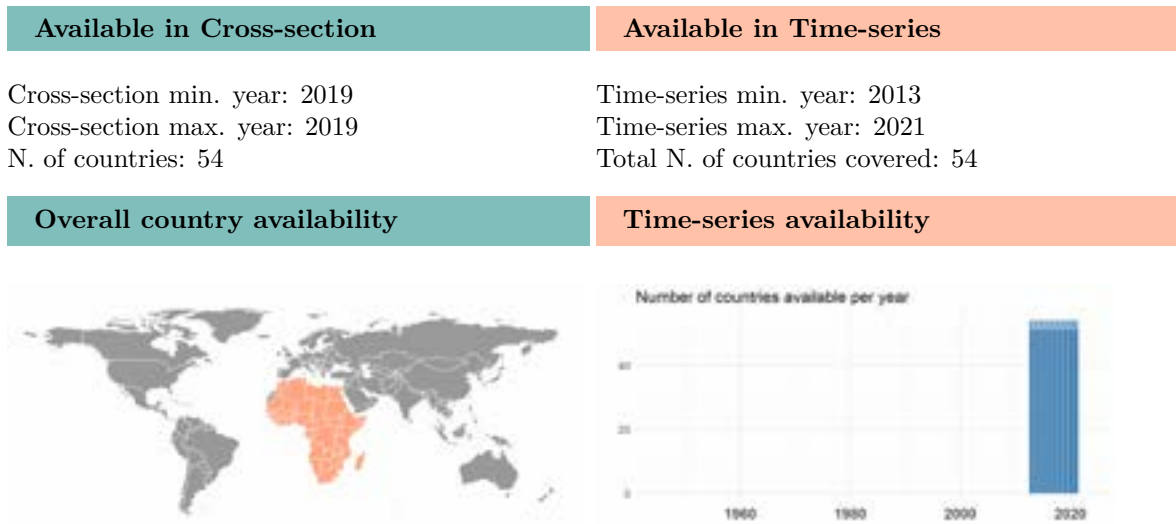

A 50 score is earned where any of the following conditions apply:

- 1) the government occasionally prevents the publication online of information by citizens, or
- 2) it occasionally encourages citizens to self-censor (e.g. with arrests, threats to prosecute, interrogations, etc.).

A 0 score is earned where at least one of the following conditions apply:

- 1) the government usually prevents the publication online of information by citizens, or
- 2) it usually encourages citizens to self-censor (e.g. with arrests, threats to prosecute, interrogations, etc.).

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.61 Practice: government doesn't block (or ask ICT firms to block) online content

QoG Code: aii_q57

Sub-score (0-100). Question no. 57. In practice, the government does not block (or require ICT firms to block) online content.

A 100 score is earned where all the following conditions are met:

- 1) there is no evidence that politically sensitive websites, keywords, search results or content are filtered, blocked or taken down, and
- 2) Web users in the country are able to access any website in the world without restriction. A 100 score can still be earned if child pornography or delinquent intellectual property websites have been taken down.

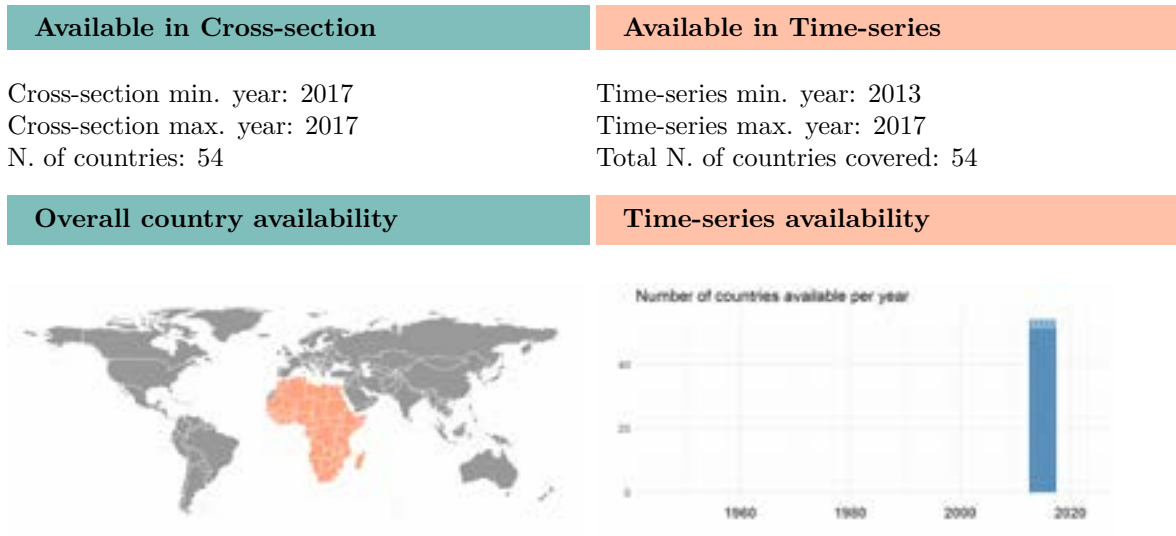

A 50 score is earned where any of the following conditions apply:

- 1) a small number of sites, keywords or search results on a specific issue are blocked (blocking cannot include widely used Internet tools such as Skype, Google, YouTube, or Facebook/Twitter), or
- 2) citizens are occasionally unable to access certain websites (national or international).

A 0 score is earned where at least one of the following conditions apply:

- 1) politically sensitive websites, keywords, search results or content are usually filtered, blocked or taken down, or
- 2) Web users in the country are usually unable to access many websites without restriction, including widely used Internet tools such as Skype, Google, YouTube, or Facebook/Twitter.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.62 Practice: ministries and autonomous agencies have websites

QoG Code: aii_q58

Sub-score (0-100). Question no. 58. In practice, ministries and autonomous agencies have websites.

A 100 score is earned where all the following conditions are met:

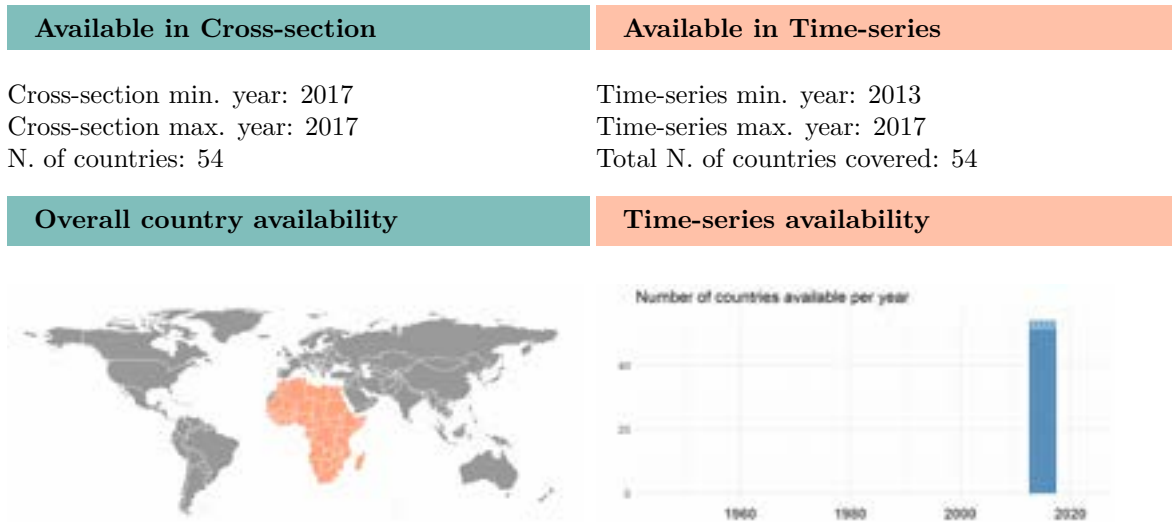

- 1) all ministries and autonomous agencies (public service providers) have websites, and
- 2) are updated at least once a month.

A 50 score is earned where any of the following conditions apply:

- 1) about half of the ministries and autonomous agencies (public service providers) have websites, or
- 2) the websites are updated less than once a month.

A 0 score is earned where less than 10% of the ministries and autonomous agencies (public service providers) have websites.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.1.63 Practice: the public services regulatory agencies have websites

QoG Code: aii_q59

Sub-score (0-100). Question no. 59. In practice, the public services regulatory agencies and the national ombudsman (when and if there is one) have websites.

A 100 score is earned where all the following conditions are met:

- 1) all the public services regulatory agencies and the national ombudsman (if one exists) have websites,
- 2) the websites inform users of their rights and how to exercise them in a way that is easy to grasp for users with limited education, and
- 3) the websites allow users to file complaints online. Note: other digital methods to file complaints, such as mobile apps or phone lines, can also be considered for this indicator.

A 50 score is earned where any of the following conditions apply:

- 1) some but not all the public services regulatory agencies and the national ombudsman have websites,
- 2) the websites contain little information about users rights and how to exercise them or the information is difficult to grasp for users with limited education, or
- 3) the websites don't allow users to file complaints online.

A 0 score is earned where at least one of the following conditions apply:

- 1) the public services regulatory agencies and the national ombudsman lack websites, or
- 2) the websites generally lack basic information about users rights or how to exercise them.

4.1.64 Rule of law sub-index

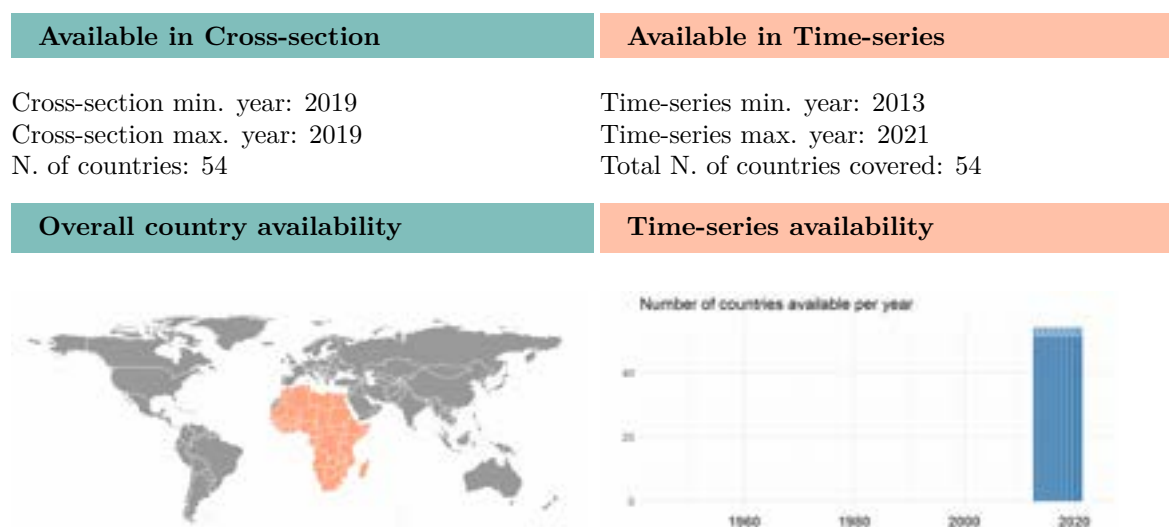

QoG Code: aii_rol

Rule of Law. This sub index from 0 to 100 is composed of:

41. In law, citizens have a right to request public information from state bodies.
42. In practice, citizen requests for public information are effective.
43. In practice, citizens can access legislative processes and documents.
44. In law, senior officials of the three branches of government (including heads of state and government, ministers, members of Parliament, judges, etc.) are required to disclose records of their assets and disclosures are public.
45. In practice, the asset disclosure process for senior officials of the three branches of government (heads of state and government, ministers, members of Parliament, judges, etc.) is effective.
46. In law, members of the civil service are required to disclose records of their assets and the disclosures are public.
47. In practice, the asset disclosure process for members of the civil service is effective.
48. In law, political parties are required to regularly disclose public donations (funds sourced from the government).
49. In practice, political parties regularly disclose public donations (funds that are sourced from the government) and the disclosures are easily available to the public.
50. In law, political parties are required to regularly disclose private donations.

51. In practice, political parties regularly disclose private donations and the disclosures are easily available to the public.
52. In practice, media organizations (print, broadcast, online) disclose the identities of their owners to the public.
53. In practice, journalists and editors adhere to strict, professional practices in their reporting.
54. In law, it is legal to report accurate news even if it damages the reputation of a public figure.
55. In practice, there is no prior government restraint (pre-publication censoring) and the government doesn't promote the media's self-censorship.
56. In practice, there is no prior government restraint (pre-publication censoring) of citizen-created content online and the government doesn't promote the self-censorship of citizens online (in blogs, social media, etc.).
57. In practice, the government does not block (or require ICT firms to block) online content.
58. In practice, ministries and autonomous agencies have websites.
59. In practice, the public services regulatory agencies and the national ombudsman (when and if there is one) have websites.

4.3 Autocratic Regime Data: All Political Regimes

Dataset by: Geddes, Wright and Frantz

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Geddes, B., Wright, J., & Frantz, E. (2014). Autocratic breakdown and regime transitions: A new data set. *Perspectives on Politics*, 12(2), 313–331

Dataset found at: <http://sites.psu.edu/dictators/>

Last update by original source: 2014-06-20

Date of download: 2022-09-29

Data to identify and analyze autocracy-to-autocracy transitions. Version 1.2.

When the leader of an autocratic regime loses power, one of three things happens: 1. The incumbent leadership group is replaced by democratically elected leaders. 2. Someone from the incumbent leadership group replaces him, and the regime persists. 3. the incumbent leadership group loses control to a different group, replacing it with a new autocracy. Much scholarship exists on the first kind of transition, but little on transitions from one autocracy to another, though they make up about half of all regime changes.

This dataset facilitates the investigation of all three kinds of transition. It provides transition information for the 280 autocratic regimes in existence from 1946 to 2010. The data identify how regimes exit power, how much violence occurs during transitions, and whether the regimes that precede and succeed them are autocratic.

4.3.1 Non-Autocracy

QoG Code: `wr_nonautocracy`

Variable on what substituted the autocracy. Classes are:

1. Democracy
2. Foreign-Occupied
3. Not-Independent
4. Provisional
5. Warlord
6. Warlord/Foreign-occupied

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2010

Total N. of countries covered: 114

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.3.2 Regime Type

QoG Code: wr_regtype

Variable on regime type. Classes are:

1. Indirect military
2. Military
3. Military-Personal
4. Monarchy
5. Oligarchy
6. Party
7. Party-Military
8. Party-Military-Personal
9. Party-Personal
10. Personal

Type of variable: Categorical

4.4 Autocratic Regime Data: Autocratic Regimes

Dataset by: Geddes, Wright and Frantz

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Geddes, B., Wright, J., & Frantz, E. (2014). Autocratic breakdown and regime transitions: A new data set. *Perspectives on Politics*, 12(2), 313–331

Dataset found at: <http://sites.psu.edu/dictators/>

Last update by original source: 2014-06-20

Date of download: 2022-09-05

When the leader of an autocratic regime loses power, one of three things happens. The incumbent leadership group is replaced by democratically elected leaders. Someone from the incumbent leadership group replaces them, and the regime persists. Or the incumbent leadership group loses control to a different group that replaces it with a new autocracy. The dataset facilitates the investigation of all three kinds of transition. The data identify how regimes exit power, how much violence occurs during transitions, and whether the regimes that precede and succeed them are autocratic. The data identify autocratic regime breakdowns regardless of whether the country democratizes, which makes possible the investigation of why the ouster of dictators sometimes leads to democracy but often does not, and many other questions.

4.4.1 Duration of Autocratic Regime

QoG Code: gwf_duration

Time-varying duration of autocratic regime up to time t .

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2010

Total N. of countries covered: 123

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.4.2 Regime Failure

QoG Code: gwf_fail

Binary indicator of autocratic regime failure.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2010

Total N. of countries covered: 123

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.4.3 Regime Failure - Subsequent Regime Type

QoG Code: gwf_failsub

Categorical variable marking the subsequent regime type:

0. No regime failure at duration time t and regime still in power December 31, 2010
1. Subsequent regime is democracy
2. Subsequent regime is autocratic
3. Subsequent regime is warlord, foreign-occupied or ceases to exist

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2010

4.4.4 Regime Failure - Ending Type

QoG Code: gwf_failtype

Categorical variable marking how the autocratic regime ends:

0. Regime still in power on December 31, 2010
1. Regime insiders change rules of regime
2. Incumbent loses elections
3. No incumbent runs in competitive election won by opponent
4. Popular uprising
5. Military coup
6. Insurgents, revolutionaries, or combatants fighting a civil war
7. Foreign imposition or invasion
8. New autocratic leader selected, changes rules, and remains in power
9. State ceases to exist, ends or government fails to control most of the country's territory

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2010
Total N. of countries covered: 123

4.5 Bertelsmann Transformation Index

Dataset by: Bertelsmann Stiftung

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Donner, S., Hartmann, H., Härterich, C., & Steinkamp, S. (2022). *Transformation index of the bertelsmann stiftung 2022*. Bertelsmann Stiftung. <http://www.bti-project.org>

Dataset found at: <https://bti-project.org/en>

Last update by original source: 2022-02-21

Date of download: 2022-10-17

The Bertelsmann Stiftung's Transformation Index (BTI) analyzes and evaluates the quality of democracy, a market economy, and political management in 137 developing and transition countries. It measures successes and setbacks on the path towards democracy based on the rule of law and a socially responsible market economy.

In-depth country reports provide the basis for assessing the state of transformation and persistent challenges and for evaluating the ability of policymakers to carry out consistent and targeted reforms. The BTI is the first cross-national comparative index that collects data to comprehensively measure the quality of governance during processes of transition.

4.5.1 Associational/Assembly Rights

QoG Code: bti_aar

To what extent can individuals form and join independent political or civic groups? To what extent can these groups operate and assemble freely? From 1 to 10.

1. Association and assembly rights are denied. Independent civic groups do not exist or are prohibited.
4. Association and assembly rights are severely limited. Oppositional political groups with any relevance are prohibited or systematically disabled. Independent civic groups can operate and assemble if they support the regime or are not outspokenly critical of it.
7. Association and assembly rights are partially limited, but generally there are no outright prohibitions of independent political or civic groups.
10. Association and assembly rights are unrestricted for individuals and independent political or civic groups within the basic democratic order.

Type of variable: Categorical

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 136

Available in Time-series

Time-series min. year: 2005
Time-series max. year: 2021
Total N. of countries covered: 137

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.5.2 Anti-Corruption Policy

QoG Code: bti_acp

To what extent does the government successfully contain corruption? From 1 to 10.

1. The government fails to contain corruption, and there are no integrity mechanisms in place.
4. The government is only partly willing and able to contain corruption, while the few integrity mechanisms implemented are mostly ineffective.
7. The government is often successful in containing corruption. Most integrity mechanisms are in place, but some are functioning only with limited effectiveness.
10. The government is successful in containing corruption, and all integrity mechanisms are in place and effective.

Type of variable: Categorical

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 136

Available in Time-series

Time-series min. year: 2005

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

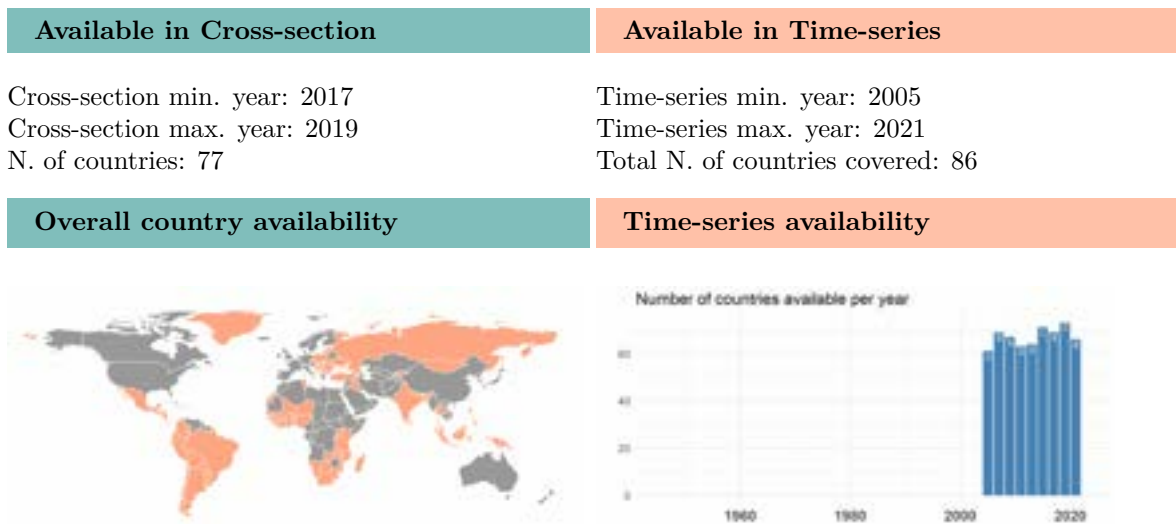

4.5.3 Approval of Democracy

QoG Code: bti_aod

How strong is the citizens' approval of democratic norms and procedures? From 1 to 10.

1. Approval of democratic norms and procedures is very low.
4. Approval of democratic norms and procedures is fairly low.
7. Approval of democratic norms and procedures is fairly high.
10. Approval of democratic norms and procedures is very high.

Type of variable: Categorical

[Find more information about this variable in the QoG Data Finder](#)

4.5.4 Basic Administration

QoG Code: bti_ba

To what extent do basic administrative structures exist? From 1 to 10.

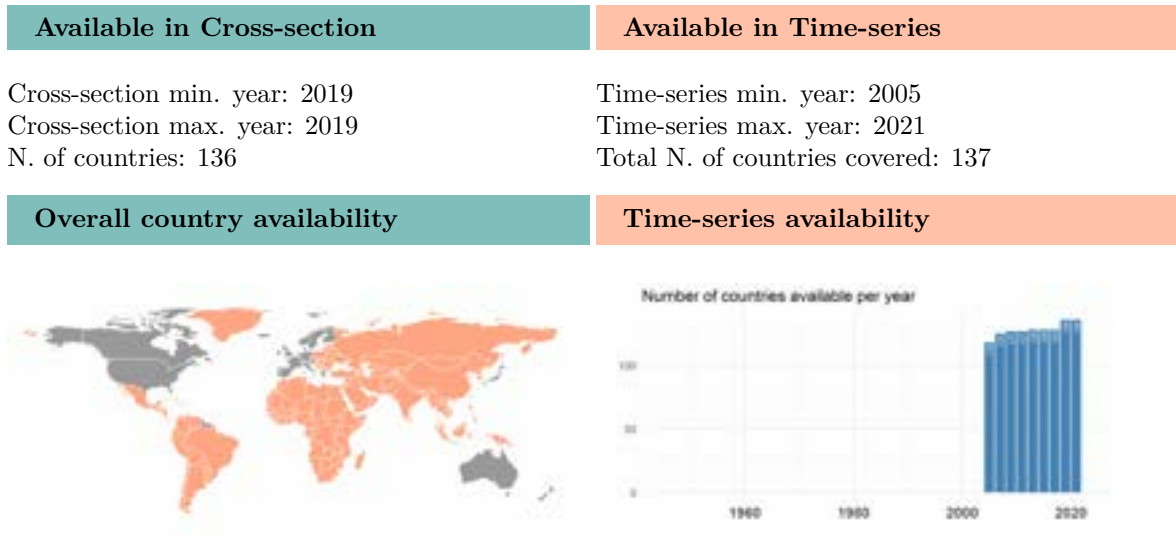

1. The administrative structures of the state are limited to keeping the peace and maintaining law and order. Their territorial scope is very limited, and broad segments of the population are not covered.
4. The administrative structures of the state are extending beyond maintaining law and order, but

their territorial scope and effectivity are limited.

7. The administrative structures of the state provide most basic public services throughout the country, but their operation is to some extent deficient.

10. The state has a differentiated administrative structure throughout the country which provides all basic public services.

Type of variable: Categorical

[Find more information about this variable in the QoG Data Finder](#)

4.5.5 Commitment to Democratic Institutions

QoG Code: bti_cdi

To what extent are democratic institutions accepted as legitimate by the relevant actors? From 1 to 10.

1. There are no democratic institutions as such (authoritarian regime).
4. Only individual institutions are accepted, while influential actors hold vetoes. Acceptance remains unstable over time.
7. Most democratic institutions are accepted as legitimate by most relevant actors.
10. All democratic institutions are accepted as legitimate by all relevant actors.

Type of variable: Categorical

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 136	Time-series min. year: 2005 Time-series max. year: 2021 Total N. of countries covered: 137
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.5.6 Conflict Intensity

QoG Code: bti_ci

How serious are social, ethnic, and religious conflicts? From 1 to 10.

1. There are no violent incidents based on social, ethnic, or religious differences.
4. There are only a few violent incidents. Radical political actors have limited success in mobilizing along existing cleavages. Society and the political elite, however, are divided along social, ethnic, or religious lines.
7. There are violent incidents. Mobilized groups and protest movements dominate politics. Society and the political elite are deeply split into social classes, ethnic or religious communities.
10. There is a civil war or a widespread violent conflict based on social, ethnic, or religious differences.

4.5.8 Civil Rights

QoG Code: bti_cr

To what extent are civil rights guaranteed and protected, and to what extent can citizens seek redress for violations of these rights? From 1 to 10.

1. Civil rights are not guaranteed, and are frequently violated. There are no mechanisms and institutions to protect citizens against violations of their rights.

4. Civil rights are guaranteed only within limited enclaves or are violated over protracted periods of time. Some mechanisms and institutions to prosecute, punish and redress violations of civil rights are established formally but do not function.

7. Civil rights are guaranteed but are partially or temporarily violated or are not protected in some parts of the country. Mechanisms and institutions to prosecute, punish and redress violations of civil rights are in place but often prove to be ineffective.

10. Civil rights are guaranteed by the constitution and respected by all state institutions. Infringements present an extreme exception. Citizens are effectively protected by mechanisms and institutions established to prosecute, punish and redress violations of their rights.

4.5.9 Civil Society Participation

QoG Code: bti_csp

To what extent does the political leadership enable the participation of civil society in the political process? From 1 to 10.

1. The political leadership obstructs civil society participation. It suppresses civil society organizations and excludes its representatives from the policy process.
4. The political leadership neglects civil society participation. It frequently ignores civil society actors and formulates its policy autonomously.
7. The political leadership permits civil society participation. It takes into account and accommodates the interests of most civil society actors.
10. The political leadership actively enables civil society participation. It assigns an important role to civil society actors in deliberating and determining policies.

Type of variable: Categorical

[Find more information about this variable in the QoG Data Finder](#)

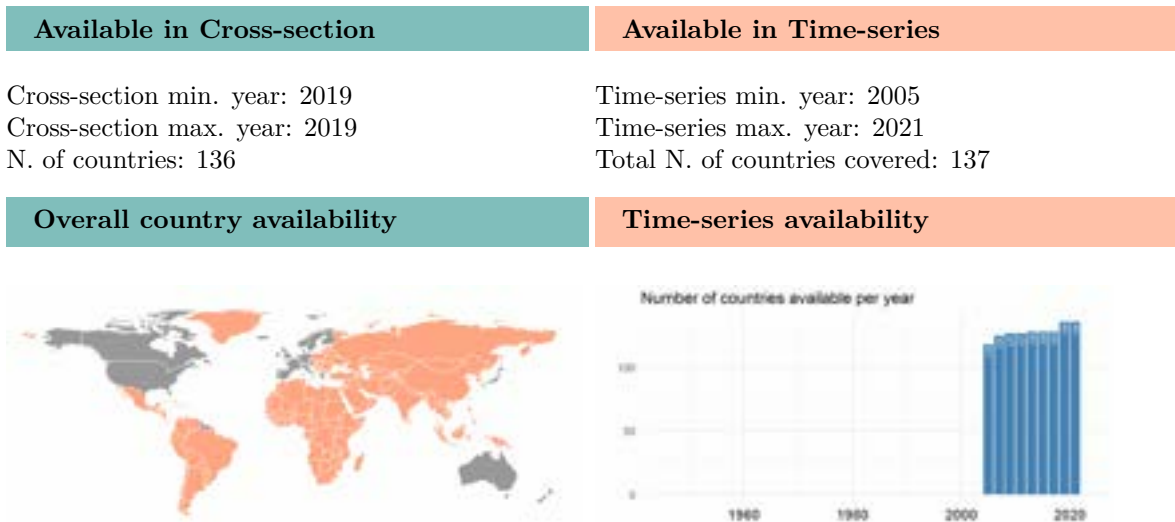

4.5.10 Civil Society Traditions

QoG Code: bti_cst

To what extent are there traditions of civil society? From 1 to 10.

1. Traditions of civil society are very strong.
4. Traditions of civil society are fairly strong.
7. Traditions of civil society are fairly weak.
10. Traditions of civil society are very weak.

Type of variable: Categorical

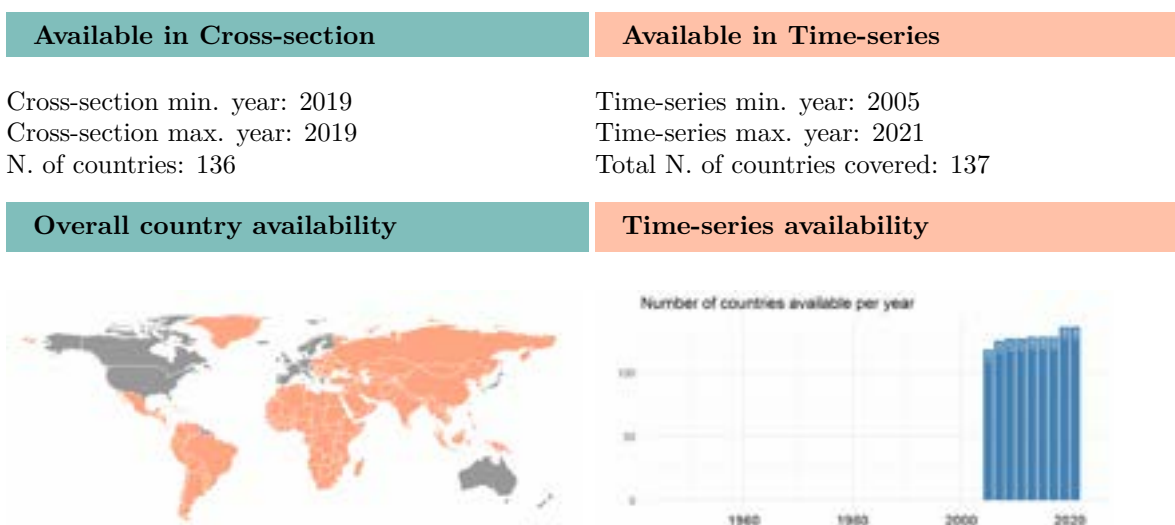

[Find more information about this variable in the QoG Data Finder](#)

4.5.11 Democracy Status

QoG Code: bti_ds

Democracy Status: The state of democracy is measured in terms of five criteria; including state-ness, political participation, rule of law, stability of the democratic institutions, and political and social integration. From 1 to 10.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.5.12 Equal Opportunity

QoG Code: bti_eo

To what extent does equality of opportunity exist? From 1 to 10.

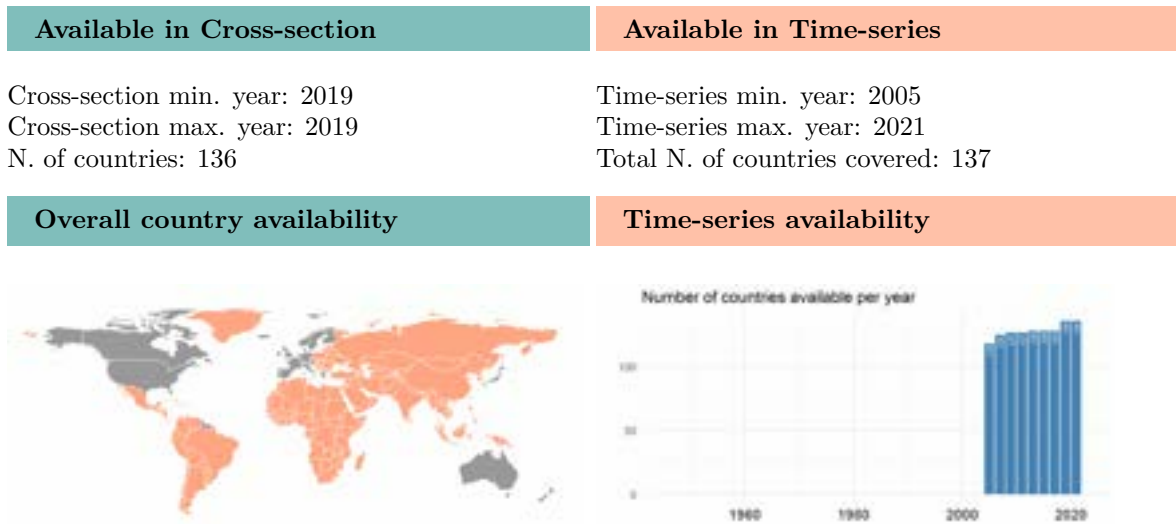

1. Equality of opportunity is not achieved. Women and/or members of ethnic or religious groups have only very limited access to education, public office, and employment. There are no legal provisions against discrimination.

4. Equality of opportunity is only partially achieved. Women and/or members of ethnic, religious, and other groups have limited access to education, public office, and employment. There are some legal provisions against discrimination, but their implementation is highly deficient.

7. Equality of opportunity is largely achieved. Women and members of ethnic or religious groups have near-equal access to education, public office, and employment. There are a number of legal provisions against discrimination, but their implementation is at times insufficient.

10. Equality of opportunity is achieved. Women and members of ethnic or religious groups have equal access to education, public office, and employment. There is a comprehensive and effective legal and institutional framework for the protection against discrimination.

Type of variable: Categorical

[Find more information about this variable in the QoG Data Finder](#)

4.5.13 Economic Output Strength

QoG Code: bti_eos

How does the economy, as measured in quantitative indicators, perform? From 1 to 10.

1. The economic performance is very poor. Strongly negative macroeconomic data may include negative GDP growth rates, very high unemployment levels, high inflation, large budget deficits, unreasonably high debt and an increasingly unsustainable current account position.

4. The economic performance is poor. Continuing negative macroeconomic data may include stagnant GDP levels, relatively high unemployment levels, low price stability, an unbalanced budget, rising debt and a volatile current account position.

7. The economic performance is good. Moderately positive macroeconomic data may include low GDP growth rates, only moderate unemployment levels, relative price stability, a slightly unbalanced budget, a tendency toward debt and a manageable current account position.

10. The economic performance is very good. Positive macroeconomic data may include relatively high GDP growth rates, relatively high employment levels, price stability, balanced budget, reasonable debt and a sustainable current account position.

4.5.15 Effective Power to Govern

QoG Code: bti_epg

To what extent do democratically elected political representatives have the effective power to govern, or to what extent are there veto powers and political enclaves? From 1 to 10.

1. Political decision-makers are not democratically elected.
4. Democratically elected political representatives have limited power to govern. Strong veto groups are able to undermine fundamental elements of democratic procedures.
7. Democratically elected political representatives have considerable power to govern. However, individual power groups can set their own domains apart or enforce special-interest policies.
10. Democratically elected political representatives have the effective power to govern. No individual or group is holding any de facto veto power.

4.5.16 Free and Fair Elections

QoG Code: bti_ffe

To what extent are political representatives determined by general, free and fair elections? From 1 to 10.

1. There are no elections on free and fair elections.
4. General, multi-party elections are held, conducted properly and accepted as the means of filling political posts. However, there are some constraints on the fairness of the elections with regard to registration, campaigning or media access.
7. General elections are held, but serious irregularities during voting process and ballot count occur. The rights to vote, campaign and run for office are restricted, and elections have de facto only limited influence over who governs.
10. National elections, if held at all, are entirely unfree and unfair.

4.5.17 Freedom of Expression

QoG Code: bti_foe

To what extent can citizens, organizations, and the mass media express opinions freely? From 1 to 10.

1. Freedom of expression is denied. Independent media do not exist or are prohibited.
4. Freedom of expression is often subject to interference or government restrictions. Distortion and manipulation shape matters of public debate.
7. Freedom of expression is occasionally subject to interference or government restrictions, but there are generally no incidents of blatant intrusions like outright state censorship or media shutdowns.
10. Freedom of expression is guaranteed against interference or government restrictions. Individuals, groups and the press can fully exercise these rights.

4.5.21 Interest Groups

QoG Code: bti_ig

To what extent is there a network of cooperative associations or interest groups to mediate between society and the political system? From 1 to 10.

1. Interest groups are present only in isolated social segments, are on the whole poorly balanced and cooperate little. A large number of social interests remain unrepresented.
4. There is a narrow range of interest groups, in which important social interests are underrepresented. Only a few players dominate, and there is a risk of polarization.
7. There is an average range of interest groups, which reflect most social interests. However, a few strong interests dominate, producing a latent risk of pooling conflicts.
10. There is a broad range of interest groups that reflect competing social interests. They tend to balance one another and are cooperative.

4.5.22 Independent Judiciary

QoG Code: bti_ij

To what extent does an independent judiciary exist? From 1 to 10.

1. The judiciary is not independent and not institutionally differentiated.
4. The independence of the judiciary is heavily impaired by political authorities and high levels of corruption. It is to some extent institutionally differentiated, but severely restricted by functional deficits, insufficient territorial operability and scarce resources.
7. The judiciary is largely independent, even though occasionally its decisions are subordinated to political authorities or influenced by corruption. It is institutionally differentiated, but partially restricted by insufficient territorial or functional operability.
10. The judiciary is independent and free both from unconstitutional intervention by other institutions and from corruption. It is institutionally differentiated, and there are mechanisms for judicial review of legislative or executive acts.

4.5.26 Monopoly on the Use of Force

QoG Code: bti_muf

To what extent does the state's monopoly on the use of force cover the entire territory of the country?
From 1 to 10.

1. There is no state monopoly on the use of force.
4. The state's monopoly on the use of force is established only in key parts of the country. Large areas of the country are controlled by guerrillas, paramilitaries or clans.
7. The state's monopoly on the use of force is established nationwide in principle, but it is challenged by guerrillas, mafias or clans in territorial enclaves.
10. There is no competition with the state's monopoly on the use of force throughout the entire territory.

4.5.29 Prosecution of Office Abuse

QoG Code: bti_poa

To what extent are public officeholders who abuse their positions prosecuted or penalized? From 1 to 10.

1. Office holders who break the law and engage in corruption can do so without fear of legal consequences or adverse publicity.
4. Office holders who break the law and engage in corruption are not prosecuted adequately under the law, but occasionally attract adverse publicity.
7. Officeholders who break the law and engage in corruption generally are prosecuted under established laws and often attract adverse publicity, but occasionally slip through political, legal or procedural loopholes.
10. Officeholders who break the law and engage in corruption are prosecuted rigorously under established laws and always attract adverse publicity.

Type of variable: Categorical

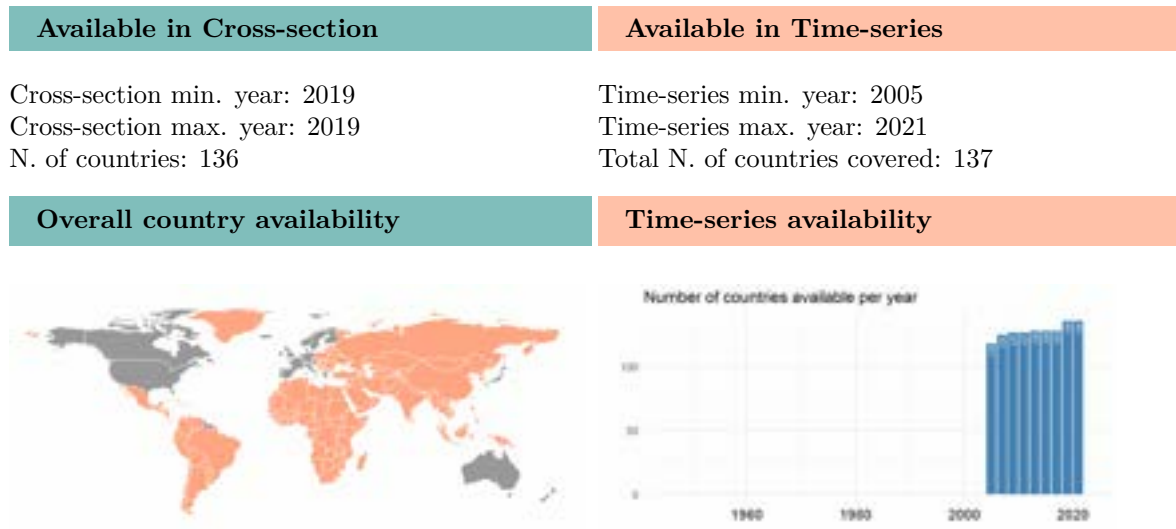

[Find more information about this variable in the QoG Data Finder](#)

4.5.30 Political Participation

QoG Code: bti_pp

Political Participation: The populace decides who rules, and it has other political freedoms. From 1 to 10. Higher scores refer to better conditions of political participation and other political freedoms.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.5.31 Private Property

QoG Code: bti_prp

There are adequate conditions to support a functional private sector. Including 'To what extent do government authorities ensure well-defined rights of private property and regulate the acquisition, benefits, use and sale of property?' and 'To what extent are private companies permitted and protected? Are privatization processes conducted in a manner consistent with market principles?'

4.5.35 Social Capital

QoG Code: bti_sc

Social Capital: To what extent have social self-organization and the construction of social capital advanced? This question aims to assess the level of trust between citizens, which fosters cooperation and mutual support for purposes of self-help, rather than primarily to further political objectives.

1. There is a very low level of trust among the population, and civic self-organization is rudimentary.
4. There is a fairly low level of trust among the population. The small number of autonomous, self-organized groups, associations and organizations is unevenly distributed or spontaneous and temporary.
7. There is a fairly high level of trust among the population and a substantial number of autonomous, self-organized groups, associations and organizations.
10. There is a very high level of trust among the population and a large number of autonomous, self-organized groups, associations and organizations.

Type of variable: Categorical

4.6 Bjørnskov-Rode regime data

Dataset by: Bjørnskov and Rode

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Bjørnskov, C., & Rode, M. (2020). Regime types and regime change: A new dataset on democracy, coups, and political institutions. *Review of International Organizations*, 15, 531–551

Dataset found at: <http://www.christianbjoernskov.com/bjoernskovrodedata/>

Last update by original source: 2022-07-19

Date of download: 2022-09-26

Bjørnskov-Rode update and provide an expansion of Cheibub, Gandhi and Vreelands Democracy-Dictatorship dataset. The authors expand the coverage to a total of 192 sovereign countries and 16 self-governing territories between 1950 and 2022. They provide more institutional details relevant in the literature and finally, they introduce an indicator of successful and failed coups d'état.

4.6.1 No. of chambers in parliament

QoG Code: br_chpar

Total number of chambers in parliament.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 191

Available in Time-series

This data set provides a dichotomous coding of democracy from 1800 until 2020; however, QoG data contains information from 1946 onwards. Authors define a country as democratic if it satisfies conditions for both contestation and participation. Specifically, democracies feature political leaders chosen through free and fair elections and satisfy a threshold value of suffrage.

4.7.1 Dichotomous democracy measure

QoG Code: bmr_dem

Dichotomous democracy measure.

Type of variable: Binary

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 194

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2020
Total N. of countries covered: 210

CSES (CSES1, CSES2, CSES3, CSES4, and CSES5) is a collaborative program of research among election study teams from around the world. Participating countries include a common module of survey questions in their post-election studies. The resulting data are deposited along with voting, demographic, district, and macro variables. The studies are then merged into a single, free, public dataset for use in comparative study and cross-level analysis. The research agenda, questionnaires, and study design are developed by an international committee of leading scholars of electoral politics and political science. The design is implemented in each country by their foremost social scientists.

Note: Portugal 2002 from the initial data Module 1 was excluded, as this module provides data until 2001, therefore these observations are coded incorrectly.

4.9.1 Closeness to Political Party

QoG Code: `cses_pc`

Do you usually think of yourself as close to any particular party? Share of the population who answered Yes.

Note: Refused to answer, Don't know and similar answers were coded as missing, and the average are based on the remaining answers.

Type of variable: Continuous

Available in Cross-section	Available in Time-series

4.10 Central Bank Independence Dataset

Dataset by: Ana Carolina Garriga

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Garriga, A. C. (2016). Central bank independence in the world: A new dataset. *International Interactions*, 42(5), 849–868. <https://doi.org/10.1080/03050629.2016.1188813>

Dataset found at: <https://sites.google.com/site/carogarriga/cbi-data-1?authuser=0>

Last update by original source: 2023-01-10

Date of download: 2023-01-10

The Central Bank Independence Dataset is the most comprehensive data set on de jure central bank independence (CBI) available to date. The data set identifies statutory reforms affecting CBI, their direction, and the attributes necessary to build the Cukierman, Webb, and Neyapti (1992) (CWN) index in 185 countries between 1970 and 2012. This is the version 2 of the dataset originally published in Garriga (2016) and includes new observations and corrections based on legislation retrieved after the publication of the original dataset.

This data set codes the existence of reforms in 6,845 observations and computes the CWN index for 6,192 observations. The data coverage not only allows researchers to test competing explanations on the determinants and effects of CBI in both developed and developing countries, but it also provides a useful instrument for cross-national studies in diverse fields.

4.10.1 Central Bank Independence unweighted index

QoG Code: cbi_cbiu

CBI unweighted index: Raw average of the four components: Chief Executive Officer, Objectives, Policy Formulation and Limitations on lending to the government. It ranges from 0 (minimum) to 1 (maximum) CBI.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1970

Time-series max. year: 2012

Total N. of countries covered: 190

Overall country availability

4.11 Centripetal Democratic Governance

Dataset by: Gerring, Thacker and Moreno

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Gerring, J., Thacker, S. C., & Moreno, C. (2005). Centripetal democratic governance: A theory and global inquiry. *The American Political Science Review*, 99(4), 567–581. <http://www.jstor.org/stable/30038965>

Dataset found at: <http://www.bu.edu/sthacker/research/articles-and-data/>

Last update by original source: 2008-06-12

Date of download: 2022-09-28

Data used in the book "A Centripetal Theory of Democratic Governance" (Gerring, John and Thacker, Strom C, 2008).

4.11.1 Parliamentarism

QoG Code: gtm_parl

The parliamentary/presidential distinction is conceptualized as a continuum with two dimensions: (a) the degree of separation (independence) between president and parliament (unity = parliamentary, separation = presidential) and, if there is any separation at all, (b) the relative power of the two players (the more power the president possesses, the more presidential is the resulting system). This complex reality is captured with a three-part coding scheme:

0. Presidential
1. Semi-presidential
2. Parliamentary

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2002

Total N. of countries covered: 167

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.11.2 Proportional Representation

QoG Code: gtm_pr

The centripetal theory of democratic governance emphasizes the following three features of an electoral system: (a) district magnitude (M), (b) seat allocation rules (majoritarian or proportional), and (c) candidate selection rules. The centripetal ideal type is defined by $M > 1$, proportional seat allocation rules, and party-controlled candidate selection. This is the closed-list-PR electoral system. Other systems are ranked lower in this coding according to their deviation from this ideal type. Thus, the coding for the list-PR variable is as follows:

0. Majoritarian or Preferential-vote.
1. Mixed-member majority or Block vote.
2. Closed-list-PR.

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2002

Total N. of countries covered: 168

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.11.3 Unitarism

QoG Code: gtm_unit

Average of Nonfederalism and Nonbicameralism: Nonfederalism is coded as 0 = federal (elective regional legislatures plus conditional recognition of subnational authority), 1 = semifederal (where there are elective legislatures at the regional level but in which constitutional sovereignty is reserved to the national government), or 2 = non-federal. Nonbicameralism is coded as 0 = strong bicameral (upper house has some effective veto power; the two houses are incongruent), 1 = weak bicameral (upper house has some effective veto power, though not necessarily a formal veto; the two houses are congruent), or 2 = unicameral (no upper house or weak upper house).

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2002

Total N. of countries covered: 167

4.12 Change in Source of Leader Support

Dataset by: Change in Source of Leader Support

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Mattes, M., Leeds, B. A., & Matsumura, N. (2016). Measuring change in source of leader support: The chisols dataset. <https://journals.sagepub.com/doi/full/10.1177/0022343315625760?journalCode=jpra>

Dataset found at: <http://www.chisols.org/data-sets.html>

Last update by original source: 2021-03-15

Date of download: 2022-12-19

The 'Change in Source of Leader Support' (CHISOLS) data is a collaborative effort by Brett Ashley Leeds (Rice University) and Michaela Mattes (University of California, Berkeley). The data collection was supported by National Science Foundation grant SES-0921781 'Collaborative Research: Interests, Institutions, and Foreign Policy Change.'

The goal of the CHISOLS data is to differentiate leader transitions in which a new leader comes to office who depends on different societal groups for support than their predecessor from leader transitions where both the current leader and their predecessor rely on essentially the same groups for support.

The data cover all countries with a population of more than 500,000 between 1919-2018. CHISOLS is available in two formats, one with the state-year as unit of analysis, and one with the leader as unit of analysis. The current release is version 5.0.

4.12.1 Whether the autocratic regime ended in the year

QoG Code: `chisols_autend`

Coded 1 when a particular autocratic subregime ends either in a nondemocratic country-year (`chisols_auttrans` coded 1) or in the first democratic year following an autocratic subregime (`chisols_regtrans` coded 1), 0 if no autocratic subregime ends during a nondemocratic country-year, and -9 for not applicable for all democratic country years except for the first democratic year following an autocratic subregime.

(See section 6.4 of the data manual for more details:

4.12.17 Number of SOLS changes in the year

QoG Code: `chisols_solschange`

This variable codes the number of support of leadership changes in the year of reference.

This variable is equal to the count of SOLS changes during the country-year in which the new SOLS was in power for more than 30 days in a row. Coded 0 if there are no SOLS changes in the year that last more than 30 days in total. This count variable does not include minor SOLS changes nor SOLS changes that last less than 30 days.

The conceptual definition of change in the source of leader support, i.e., SOLS change, is: a case in which the subset of societal groups whose support allows a leader to retain and exercise power is different from the subset of societal groups whose support allowed the leader's predecessor to retain and exercise power. Operationally, this required the authors first to identify who the leader of a state is and when leadership transitions occur, and then to identify the groups necessary for a leader to retain and exercise power.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2018
Cross-section max. year: 2018
N. of countries: 162

Available in Time-series

[Find more information about this variable in the QoG Data Finder](#)

4.12.19 Number of leader transitions in the year

QoG Code: chisols_totalldrtrans

This variable codes the number of leader transitions in the year of reference. The authors rely on existing data by Goemans, Gleditsch, and Chiozza (2009) to determine leaders and leadership changes. This database (Archigos v. 4.1 for the 5th version of this dataset) identifies the effective primary ruler and the dates the leader was in power for each independent state, as coded by Gleditsch and Ward (1999), between 1875 and 2014.

The authors code the leader transition as occurring on the day the new leader assumes power. Thus, if one leader departs from office in December and the new leader takes power in January, the leader who left office in December will continue to be listed as the first leader in January until the transition occurs.

Type of variable: Discrete

[Find more information about this variable in the QoG Data Finder](#)

4.12.20 Whether the state is characterized by warlordism in the year

QoG Code: chisols_warlord

Coded 1 if a nondemocratic country-year is characterized by warlordism, 0 if it is not characterized by warlordism, and -9 for not applicable if the country-year is democratic.

4.13 Characteristics of National Constitutions

Dataset by: The Comparative Constitutions Project

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Elkins, Z., & Ginsburg, T. (2021). Characteristics of national constitutions, version 3.0 [Last modified: May 20, 2021. Available at [comparativeconstitutionsproject.org](http://www.comparativeconstitutionsproject.org)]. <http://www.comparativeconstitutionsproject.org>

Dataset found at: <http://comparativeconstitutionsproject.org/>

Last update by original source: 2021-05-20

Date of download: 2022-10-03

This dataset presents records of the characteristics of national constitutions written since 1789. Each constitutional text is coded twice by different coders working independently. To maximize the reliability of the final data, the discrepancies between these two codings are reconciled by a third individual - a reconciler. This is the second public release of data (version 2.0) on the content of constitutions. Authors rely on Ward and Gleditsch's list to identify which countries are independent in a given year. There are two concepts used to categorize constitutional texts; a constitutional system encompasses the period in which a constitution is in force before it is replaced or suspended, and a constitutional event is any change to a country's constitution, including adoption, amendment, suspension, or reinstatement. For years in which there are multiple events, the constitution is coded as it stood in force at the end of the year. For example, if a constitution was amended the same year as it was adopted, the content of the constitution is coded as amended rather than as originally adopted. In addition, since events are (often) in force for multiple years, authors interpolated the data associated to each event across all country-years in which that event was in force. Note that this is an extremely conservative interpolation strategy because most constitutional amendments do not change many provisions. As a result, for most variables, one can safely interpolate across constitutional systems.

4.13.1 Duty of the People is to Build Country in Constitution

QoG Code: `ccp_buildsoc`

Does the constitution refer to a duty of the people to take part in building society or to work for the development of the country?

1. Yes

4.14 Classification of Political Regimes

Dataset by: Cheibub, Gandhi and Vreeland

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Cheibub, J. A., Gandhi, J., & Vreeland, J. R. (2010). Democracy and dictatorship revisited. *Public Choice*, 143(1-2), 67–101

Dataset found at: <https://sites.google.com/site/joseantoniocheibub/datasets/dd>

Last update by original source: 2010-09-13

Date of download: 2022-10-03

Classification of political regimes as democracy and dictatorship. Classification of democracies as parliamentary, semi-presidential (mixed) and presidential. Classification of dictatorships as military, civilian and royal.

4.14.1 Democracy

QoG Code: chga_demo

A regime is considered a democracy if the executive and the legislature is directly or indirectly elected by popular vote, multiple parties are allowed, there is de facto existence of multiple parties outside of regime front, there are multiple parties within the legislature, and there has been no consolidation of incumbent advantage (e.g. unconstitutional closing of the lower house or extension of incumbent's term by postponing of subsequent elections). Transition years are coded as the regime that emerges in that year.

4.15 Comparative Political Data Set

Dataset by: Armingeon, Engler and Leemann

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Armingeon, K., Engler, S., & Leemann, L. (2022). Comparative political data set 1960-2020

Dataset found at: <http://www.cpbs-data.org/>

Last update by original source: 2021-10-13

Date of download: 2022-10-03

The Comparative Political Data Set 1960-2020 (CPDS) is a collection of political and institutional data which have been assembled in the context of the research projects "Die Handlungsspielräume des Nationalstaates" and "Critical junctures. An international comparison" directed by Klaus Armingeon and funded by the Swiss National Science Foundation. This dataset consists of (mostly) annual data for 36 democratic OECD and/or EU member countries for the period between 1960 to 2020. In all countries, political data were collected only for the democratic periods. The dataset is suited for cross-national, longitudinal, and pooled time-series analyses.

This dataset combines and replaces the earlier versions "Comparative Political Data Set I" (data for 23 OECD countries from 1960 onwards) and the "Comparative Political Data Set III" (data for 36 OECD and/or EU member states from 1990 onwards). A variable has been added to identify former CPDS I countries.

4.15.1 Number of changes in government per year

QoG Code: cpds_chg

Number of changes in government per year [termination of government due to (a) elections, (b) voluntary resignation of the Prime Minister, (c) resignation of Prime Minister due to health reasons, (d) dissension within government (break up of the coalition), (e) lack of parliamentary support, (f) intervention by the head of state, or (g) broadening of the coalition (inclusion of new parties)].

4.16 Contestation and Inclusiveness, 1950-2000

Dataset by: Coppedge, Alvarez and Maldonado

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Coppedge, M., Alvarez, A., & Maldonado, C. (2008). Two persistent dimensions of democracy: Contestation and inclusiveness. *The Journal of Politics*, 70(3), 632–647

Dataset found at: <http://www3.nd.edu/~mcoppedg/crd/datacrd.htm>

Last update by original source: 2009-06-25

Date of download: 2022-09-30

These are the two principal components of 13-15 indicators of democracy, including those compiled by Freedom House; Polity; Arthur Banks; Alvarez, Cheibub, Limongi, and Przeworski, as updated by Cheibub and Gandhi; Bollen; and Cingranelli and Richards. The dataset covers most countries in the world from 1950 through 2000. In an article in the *Journal of Politics* (July 2008), the authors argue that these principal components, which capture 75 percent of variation in the most commonly used democracy indicators, measure Robert Dahl's two dimensions of polyarchy: contestation and inclusiveness.

4.16.1 Contestation (standardized version)

4.17 Corruption Perceptions Index

Dataset by: Transparency International

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Transparency International. (2023). Corruption perception index 2022 [Licensed under CC-BY-ND 4.0]. <http://www.transparency.org/cpi>

Dataset found at: <https://www.transparency.org/en/cpi/2022/>

Last update by original source: 2023-01-31

Date of download: 2023-01-31

The CPI focuses on corruption in the public sector and defines corruption as the abuse of public office for private gain. The surveys used in compiling the CPI tend to ask questions in line with the misuse of public power for private benefit, with a focus, for example, on bribe-taking by public officials in public procurement. The sources do not distinguish between administrative and political corruption. The CPI Score relates to perceptions of the degree of corruption as seen by business people, risk analysts and the general public and ranges between 0 (highly corrupt) and 100 (highly clean).

Note: The time-series information in the CPI scores can only be used if interpreted with caution. Year-to-year shifts in a country's score can result not only from a changing perception of a country's performance but also from a changing sample and methodology. That is, with differing respondents and slightly differing methodologies, a change in a country's score may also relate to the fact that different viewpoints have been collected and different questions have been asked. Moreover, each country's CPI score is composed as a 3-year moving average, implying that if changes occur they only gradually affect a country's score. For a more detailed discussion of comparability over time in the CPI, see Lambsdorff 2005.

Note: In 2012 TI changed the methodology for which the data is not comparable and only data from 2012 and onwards can be compared.

Also, the observation "Belgium/Luxembourg" from the 1995 data has been dropped.

The Corruption Perception Index (2022) by Transparency International is licensed under CC-BY-ND 4.0.

4.17.1 Corruption Perceptions Index

QoG Code: `ti_cpi`

Corruption Perceptions Index. Scale of 0-100 where 0 equals the highest level of perceived corruption and 100 equals the lowest level of perceived corruption.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2021 N. of countries: 179	Time-series min. year: 2012 Time-series max. year: 2022 Total N. of countries covered: 179

4.18 Corruption Risks Indicators

Dataset by: Fazekas and Kocsis

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Fazekas, M., & Kocsis, G. (2020). Uncovering high-level corruption: Cross-national objective corruption risk indicators using public procurement data. <https://doi.org/doi:10.1017/S0007123417000461>

Dataset found at: <https://opentender.eu/download>

Last update by original source: 2023-01-25

Date of download: 2023-01-25

Measuring high-level corruption is subject to extensive scholarly and policy interest, which has achieved moderate progress in the last decade. This dataset presents four objective proxy measures of high-level corruption in public procurement: single bidding in competitive markets, the share of contracts with "no published call for tender" red flag, the share of contracts with "non-open procedure" red flag, and share of contracts with "tax haven" red flag.

Using official government data on 4 million contracts in thirty-two European countries from 2011 to 2021, the authors directly operationalize a common definition of corruption: unjustified restriction of access to public contracts to favour a selected bidder.

Corruption indicators are calculated at the contract level, but produce aggregate indices consistent with well-established country-level indicators, and are also validated by micro-level tests.

4.18.1 Number of awarded contracts above 130,000 EUR

QoG Code: cri_contr

Number of successfully awarded contracts within tenders published on TED above 130k EUR threshold.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019	Time-series min. year: 2011
Cross-section max. year: 2019	Time-series max. year: 2021
N. of countries: 32	Total N. of countries covered: 32

4.19 Country Ruggedness and Geographical Data (2012)

Dataset by: Nunn and Puga

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Nunn, N., & Puga, D. (2012). Ruggedness: The blessing of bad geography in Africa. *Review of Economics and Statistics*, 94(1), 20–36

Dataset found at: <http://diegopuga.org/data/rugged/>

Last update by original source: 2010-11-12

Date of download: 2022-08-10

The dataset of terrain ruggedness and other geographical characteristics of countries was created by Nathan Nunn and Diego Puga for their article 'Ruggedness: The blessing of bad geography in Africa', published in the *Review of Economics and Statistics* 94(1), February 2012: 20-36.

4.19.1 Percentage of desert in 2012

QoG Code: nunn_desert

The percentage of the land surface area of each country covered by sandy desert, dunes, rocky or lava flows, was calculated on the basis of the desert layer of the Collins Bartholomew World Premium digital map data (Collins Bartholomew, 2005) and the country boundaries described above. This was initially computed as a cruder measure of soil (in)fertility for an early draft of the paper and is no longer used in the final version. Nunn and Puga have left it in the dataset in case it is of use to other researchers.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 191

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.19.2 Average distance to nearest ice-free coast (1000 km) in 2012

QoG Code: nunn_dist_coast

Average distance to the nearest ice-free coast (1000 km). To calculate the average distance to the closest ice-free coast in each country, Nunn and Puga first compute the distance to the nearest ice-free coast for every point in the country in equi-rectangular projection with standard parallels at 30 degrees, on the basis of sea and sea ice area features contained in the fifth edition of the Digital Chart of the World (US National Imagery and Mapping Agency, 2000) and the country boundaries described above. Then Nunn and Puga average this distance across all land in each country not covered by inland water features. Units are thousands of kilometres.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 191

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.19.3 Percentage within 100 km of ice-free coast in 2012

QoG Code: nunn_near_coast

Within 100 km of ice-free coast. On the basis of the same data used to calculate the average distance to the nearest ice-free coast, Nunn and Puga calculate the percentage of the land surface area of each country that is within 100 km of the nearest ice-free coast.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 191

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.19.4 Ruggedness (Terrain Ruggedness Index, 100 m) in 2012

QoG Code: `nunn_rugged`

This is the Terrain Ruggedness Index originally devised by Riley, DeGloria, and Elliot (1999) to quantify topographic heterogeneity in wildlife habitats providing concealment for prey and lookout posts.

The source of elevation data is GTOPO30 (US Geological Survey, 1996), a global elevation data set developed through a collaborative international effort led by staff at the US Geological Survey's Center for Earth Resources Observation and Science (EROS). Elevations in GTOPO30 are regularly spaced at 30 arc-seconds across the entire surface of the Earth on a map using a geographic projection, so the sea-level surface distance between two adjacent grid points on a meridian is half a nautical mile or, equivalently, 926 metres. After calculating the Terrain Ruggedness Index for each point on the grid, Nunn and Puga average across all grid cells in the country not covered by water to obtain the average terrain ruggedness of the country's land area. Since the sea-level surface that corresponds to a 30 by 30 arcsecond cell varies in proportion to the cosine of its latitude, when calculating the average terrain ruggedness - or the average of any other variable - for each country, Nunn and Puga assign each cell by its latitude-varying sea-level surface. Nunn and Puga assign land to countries - for this and other variables - using digital boundary data based on the fifth edition of the Digital Chart of the World (US National Imagery and Mapping Agency, 2000), which Nunn and Puga have updated to reflect 2000 country boundaries using information from the International Organization for Standardization ISO 3166 Maintenance Agency and other sources. Nunn and Puga exclude areas covered by permanent inland water area features contained in the same edition of the Digital Chart of the World. The units for the terrain ruggedness index correspond to the units used to measure elevation differences. In our calculation, ruggedness is measured in hundreds of metres of elevation difference for grid points 30 arc-seconds (926 metres on the equator or any meridian) apart.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 191

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.19.5 Percentage of tropical climate in 2012

QoG Code: nunn_tropical

Tropical climate. Using detailed temperature and precipitation data from the Climatic Research Unit of the University of East Anglia and the Global Precipitation Climatology Centre of the German Nunn and Pugaather Service, Kottek, Grieser, Beck, Rudolf, and Rubel (2006) classify each cell on a 30 arc-minute grid covering the entire land area of the Earth into one of 31 climates in the widely-used Köppen-Geiger climate classification. Based on these data and the country boundaries described above, Nunn and Puga calculate the percentage of the land surface area of each country that has any of the four Köppen-Geiger tropical climates.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 191

Overall country availability

4.20.13 Employment rates: Men

QoG Code: `oecd_emplgndr_t1b`

Employment rates, share of persons of working age in employment: men

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018
Cross-section max. year: 2018
N. of countries: 38

Available in Time-series

Time-series min. year: 1955
Time-series max. year: 2018
Total N. of countries covered: 39

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.14 Employment rates: Total

QoG Code: `oecd_emplgndr_t1c`

Employment rates, share of persons of working age in employment: total

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018
Cross-section max. year: 2018
N. of countries: 38

Available in Time-series

Time-series min. year: 1955
Time-series max. year: 2018
Total N. of countries covered: 39

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.15 Real GDP growth

QoG Code: oecd_evogdp_t1

Annual real GDP growth in percentage

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2018
N. of countries: 44

Available in Time-series

Time-series min. year: 1970
Time-series max. year: 2018
Total N. of countries covered: 45

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.16 Population growth rates

QoG Code: `oecd_evopop_g1`

Population growth rates, annual growth in percentage

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1951

Time-series max. year: 2014

Total N. of countries covered: 44

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.17 Population levels

QoG Code: `oecd_evopop_t1`

Population levels in thousands of inhabitants

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1950

Time-series max. year: 2014

Total N. of countries covered: 44

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.18 Real value added: agriculture, fishing, hunting and forestry

QoG Code: oecd_evova_t1a

Real value added in agriculture, fishing, hunting and forestry, annual growth in percentage

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2018

N. of countries: 40

Available in Time-series

Time-series min. year: 1970

Time-series max. year: 2018

Total N. of countries covered: 40

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.19 Real value added: industry including energy

QoG Code: `oecd_evova_t1b`

Real value added in industry including energy, annual growth in percentage

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2018
N. of countries: 40

Available in Time-series

Time-series min. year: 2000
Time-series max. year: 2018

4.20.71 Household net saving rates

QoG Code: `oecd_houssave_t1`

Household net saving rates as a percentage of household disposable income

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.20.72 Financial asset of households: Currency and deposits

QoG Code: oecd_houswealth_t1a

Financial asset of households as a percentage of total financial assets: currency and deposits

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.73 Financial asset of households: Debt securities

QoG Code: `oecd_houswealth_t1b`

Financial asset of households as a percentage of total financial assets: debt securities

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2018
N. of countries: 37

Available in Time-series

Time-series min. year: 1995
Time-series max. year: 2018
Total N. of countries covered: 38

Overall country availability

Time-series availability

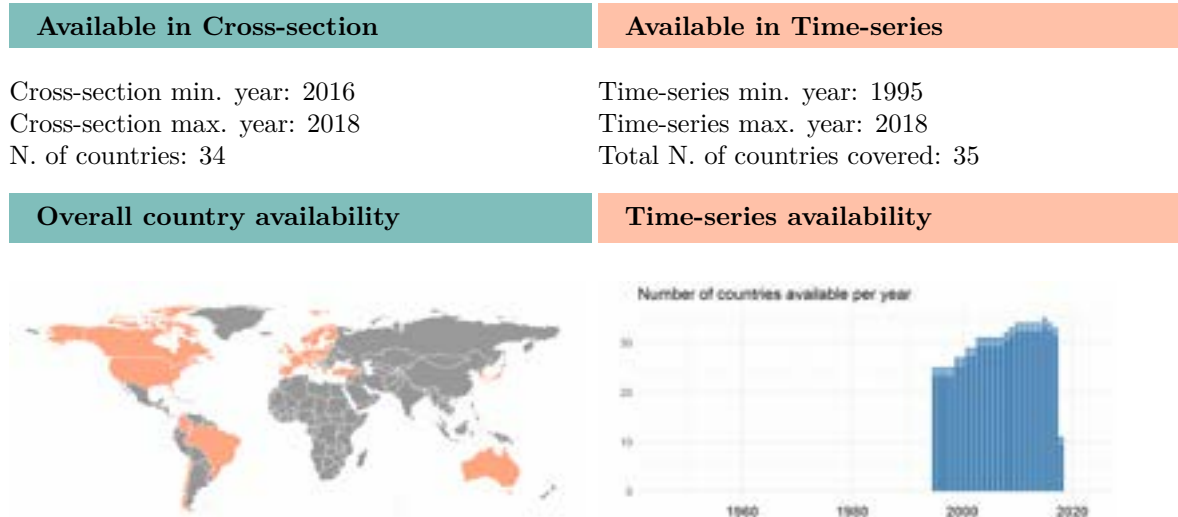

[Find more information about this variable in the QoG Data Finder](#)

4.20.74 Financial asset of households: equity

QoG Code: `oecd_houswealth_t1c`

Financial asset of households as a percentage of total financial assets: equity

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.20.75 Financial asset of households: investment funds shares

QoG Code: oecd_houswealth_t1d

Financial asset of households as a percentage of total financial assets: investment funds shares

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.76 Financial asset of households: Life insurance and annuities

QoG Code: `oecd_houswealth_t1e`

Financial asset of households as a percentage of total financial assets: life insurance and annuities

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2018
N. of countries: 32

Available in Time-series

Time-series min. year: 1995

QoG Code: oecd_pension_t1b

Private pension expenditure as a percentage of GDP

Type of variable: Continuous

Available in Time-series

Time-series min. year: 2008

Time-series max. year: 2013

Total N. of countries covered: 36

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.130 Total expenditure on health

QoG Code: `oecd_pphlthxp_t1c`

Total expenditure on health as a percentage of GDP

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2017
N. of countries: 38

Available in Time-series

Time-series min. year: 1970
Time-series max. year: 2017
Total N. of countries covered: 45

Overall country availability

Time-series availability

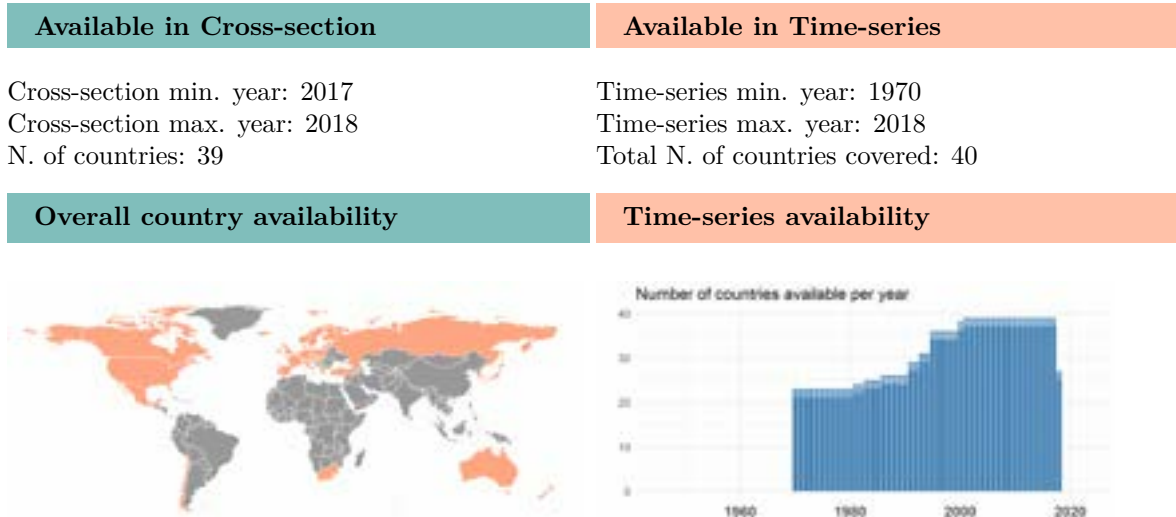

[Find more information about this variable in the QoG Data Finder](#)

4.20.131 GDP per hour worked

QoG Code: `oecd_prodincom_g1`

GDP per hour worked in US dollars, current prices and PPPs

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.20.132 Levels of GDPpc & labour productivity (% gap in USD)

QoG Code: oecd_prodincom_g2a

Levels of GDP per capita as a percentage gap with respect to US GDP per capita in 2011

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.20.133 Levels of GDPpc & labour productivity (Effect of labour util.)

QoG Code: `oecd_prodincom_g2b`

Levels of GDP per capita as an effect of labour utilisation with respect to US GDP per capita in 2011

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2017
N. of countries: 38

Available in Time-series

Time-series min. year: 1970
Time-series max. year: 2017
Total N. of countries covered: 39

4.21 Data on Central Bank Independence

Dataset by: Davide Romelli

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Romelli, D. (2022). The political economy of reforms in central bank design: Evidence from a new dataset. *Economic Policy*, 37, 641–688. <https://doi.org/10.1093/epolic/eiac011>

Dataset found at: <https://davideromelli.com/cbidata/>

Last update by original source: 2022-03-04

Date of download: 2022-06-16

This dataset provides information on a comprehensive index of CBI covering a wide range of central bank characteristics based on the charters of 154 central banks, over the period 1972-2017. The construction of the index uses, as a starting point, the two most commonly employed CBI indices, namely the Grilli et al. (1991) [GMT] and the Cukierman et al. (1992) [CWN]. This new index, called CBI extended (CBIE) index, provides information on 42 criteria of central bank institutional design across six dimensions: (1) governor and central bank board, (2) monetary policy and conflict resolution, (3) objectives, (4) limitations on lending to the government, (5) financial independence and (6) reporting and disclosure.

This extended index incorporates the characteristics of both the GMT and CWN indices. Moreover, it expands the GMT political independence index by collecting additional information on the dismissal of the governor and other board members, in addition to identifying if the governor is legally allowed to hold other offices in the government. It also augments the GMT economic independence index by including information on the authority responsible for setting the financial conditions on lending to the government. Apart from integrating these two indices, one important innovation of the CBIE index is the inclusion of new criteria that capture good practices in central bank financial independence and reporting and disclosure.

In addition to the data on the CBIE index, this dataset also provides information on the various subcomponents of the index, updated data on the Grilli et al. (1991), the Cukerman et al. (1992) and the Jacome and Vazquez indices of CBI, as well as a dummy indicating whether the independence of the central bank is entrenched in the constitution.

4.21.1 Central Bank's governor and central bank board

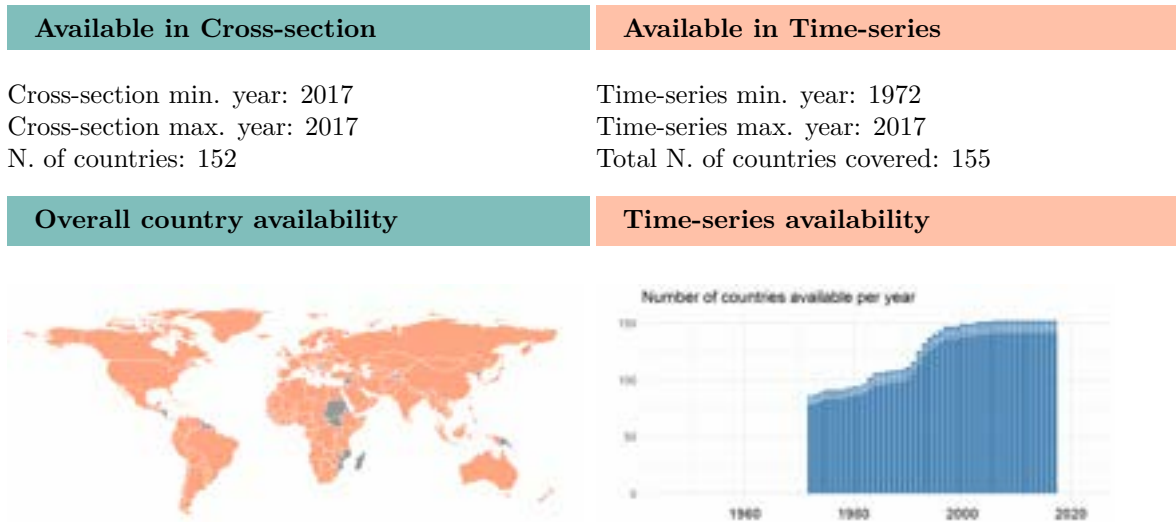

QoG Code: `cbie_board`

Governor and central bank board.

Average of the following components: Who appoints the governor, Term of office of the governor, Reappointment option for the governor, Dismissal of governor, Governor allowed to hold another office in government, Qualification requirements for governor, Who appoints the board members, Term of office of board members, Reappointment option for board members, Dismissal of board members, Board members allowed to hold another office in government, Qualification requirements for board members, Staggering term of office for board members, Government representatives in the board.

The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

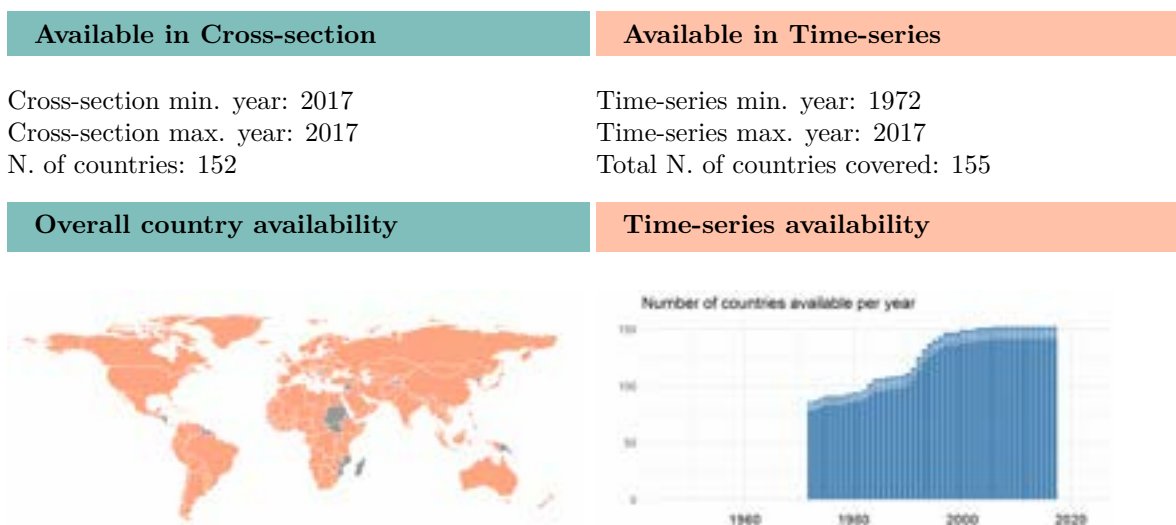

[Find more information about this variable in the QoG Data Finder](#)

4.21.2 Central Bank's governor and central bank board reform

QoG Code: `cbie_boardref`

Dummy that takes the value of 1 if the CBIE - Governor and central bank board index has changed between year t and $t-1$.

Type of variable: Binary

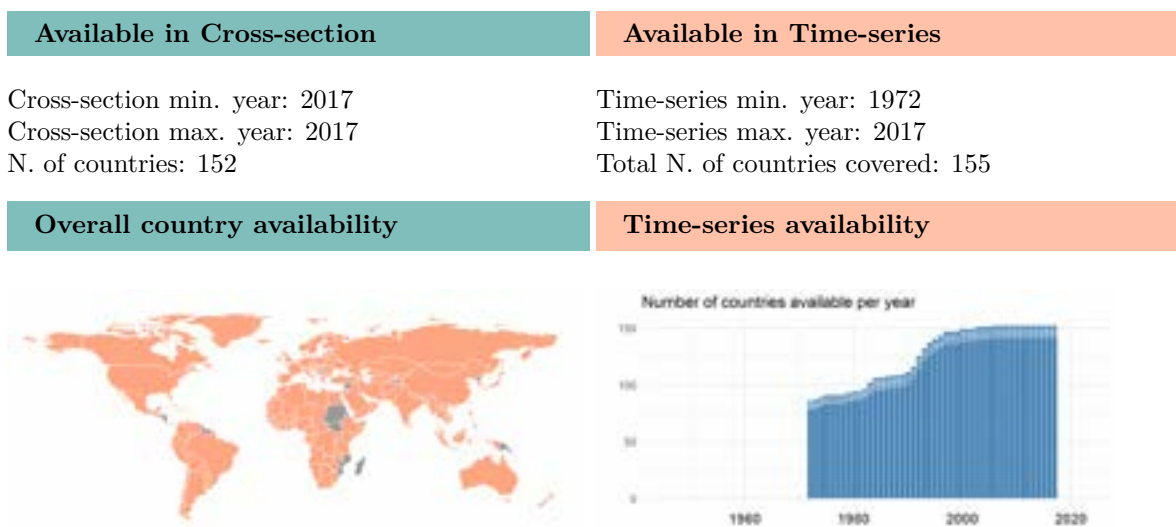

[Find more information about this variable in the QoG Data Finder](#)

4.21.3 Central bank independence in the constitution

QoG Code: `cbie_cbiconstitution`

Dummy that takes the value of 1 if the degree of independence of the central bank is entrenched in the constitution.

Type of variable: Binary

[Find more information about this variable in the QoG Data Finder](#)

4.21.4 Index of central bank independence (Jácome and Vázquez, 2008)

QoG Code: `cbie_cwne`

Jácome and Vázquez (2008) Index of central bank independence. The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.21.5 Central Bank's Financial independence

QoG Code: `cbie_finances`

Financial independence.

Average of the following components: Payment of the initial capital of the central bank, Authorized capital of the central bank, Central bank financial autonomy, Arrangements for automatic recapitalization, Transfers of money from the treasury, Central bank approves its annual budget, Central bank adopt its annual balance sheet, Auditing agency, Allocation of net profits, Allocation of profits to a general reserve fund, Partial payments of dividends before the end of the fiscal year, Unrealized profits included in the calculation of distributable profits.

The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2017
N. of countries: 152

Available in Time-series

Time-series min. year: 1972
Time-series max. year: 2017
Total N. of countries covered: 155

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.21.6 Central Bank's Financial independence reform

QoG Code: `cbie_financesref`

Dummy that takes the value of 1 if the CBIE - Financial independence index has changed between year t and $t-1$.

Type of variable: Binary

Available in Cross-section	Available in Time-series
Cross-section min. year: 2017 Cross-section max. year: 2017 N. of countries: 152	Time-series min. year: 1972 Time-series max. year: 2017 Total N. of countries covered: 155
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.21.7 Index of central bank independence (Grilli et al., 1991)

QoG Code: `cbie_gmt`

Grilli et al. (1991) index of central bank independence. The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2017 Cross-section max. year: 2017 N. of countries: 152	Time-series min. year: 1972 Time-series max. year: 2017 Total N. of countries covered: 155

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.21.8 Central Bank Independence Extended Index

QoG Code: `cbie_index`

Average of the scores across these six dimensions of the index, i.e. the raw average of the four components:

- (1) governor and central bank board,
- (2) monetary policy and conflict resolution,
- (3) objectives,
- (4) limitations on lending to the government,
- (5) financial independence and
- (6) reporting and disclosure.

The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

This extended index incorporates the characteristics of both the GMT and CWN indices and, includes new criteria that capture good practices in central bank financial independence and reporting and disclosure.

This index is in a scale from 0 to 1 where 1 indicates more central bank independence.

For more details about the construction of this index, please visit <https://academic.oup.com/economicpolicy/article/37>

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2017
N. of countries: 152

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.21.10 Central Bank's Limitations on lending to the government

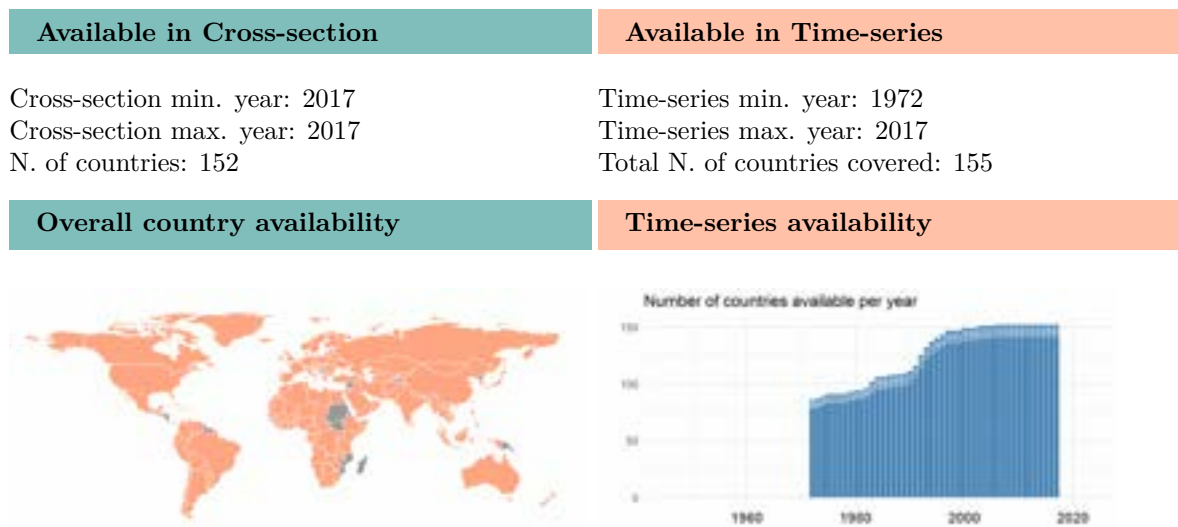

QoG Code: `cbie_lending`

Limitations on lending to the government.

Average of the following components: Direct credit: not automatic, Direct credit: market for lending, Who decides financing conditions to government, Beneficiaries of central bank lending, Direct credit: type of limit, Direct credit: maturity of loans, Direct credit: interest rates, Prohibition from buying government securities in primary market.

The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.21.11 Central Bank's Limitations on lending to the government reform

QoG Code: cbie_lendingref

Dummy that takes the value of 1 if the CBIE - Limitations on lending to the government index has changed between year t and t-1.

Type of variable: Binary

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.21.12 Index of central bank independence (Cukierman et al., 1992)

QoG Code: cbie_lvau

Cukierman et al. (1992) Unweighted Index of central bank independence. The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2017

[Find more information about this variable in the QoG Data Finder](#)

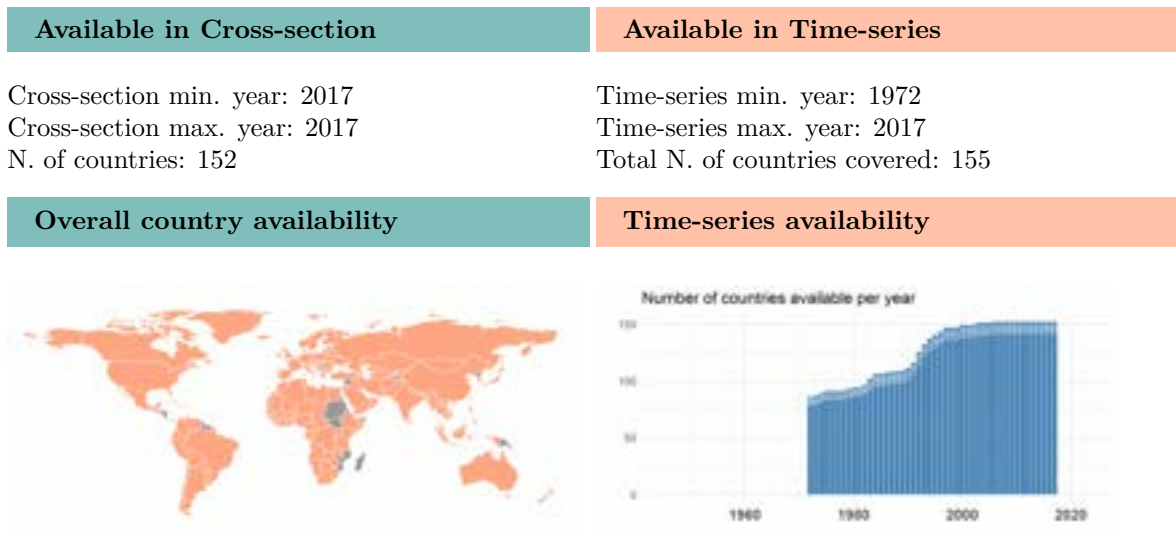

4.21.13 Central Bank's Objectives

QoG Code: cbie_obj

Objectives. Provides information on the central banks statutory goals.

The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.21.14 Central Bank's Objectives reform

QoG Code: cbie_objref

Dummy that takes the value of 1 if the CBIE - Objectives index has changed between year t and t-1.

Type of variable: Binary

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.21.15 Central Bank's Monetary policy and conflicts resolution

QoG Code: `cbie_policy`

Monetary policy and conflicts resolution. Average of the following components: Who formulates monetary policy, Central bank responsible to fix key policy rates, Banking sector supervision, Central bank role in governments budget and/or debt, Final authority in monetary policy.

The index ranges from 0 to 1 where 0 corresponds to the lowest level of independence to 1, the highest level.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2017

4.22 Dataset for Information and Accountability Transparency (2014)

Dataset by: Andrew Williams

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Williams, A. (2015). A global index of information transparency and accountability. *Journal of Comparative Economics*, 43(3), 804–824. <https://doi.org/10.1016/j.jce.2014.10.004>

Dataset found at: <https://andrewwilliamsecon.wordpress.com/datasets/>

Last update by original source: 2014-09-23

Date of download: 2022-08-29

The article "A global index of information transparency and accountability" (Williams, 2014) uses a relatively new methodology, similar to Transparency International's Corruption Perceptions Index, to construct composite indicators of Informational Transparency, and Accountability. These new indicators use data from 29 sources, with scores being derived annually between 1980 and 2010 across more than 190 countries.

4.22.1 Accountability Transparency

QoG Code: diat_ati

Accountability Transparency. The author has 16 separate indicators for the Accountability Transparency Index (six for the measurement of a free media, four for fiscal transparency, and six for political constraints). 1980 is considered to be the base year. The Accountability Transparency Index has 115 countries in 1980, but rising to up to 189 countries towards the end of the period.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1980

Time-series max. year: 2010

Total N. of countries covered: 191

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.22.2 Information Transparency

QoG Code: diat_iti

Information Transparency. Sub-indicators are constructed to reflect the nuances of this type of transparency. Specifically, three sub-components are constructed: (1) the existence of a free and independent media; (2) fiscal (budgetary) transparency; (3) political constraints. The author has 13 separate indicators for the Information Transparency Index (six for the quantity of information, four for the processes that generate that information, and three for the infrastructure required to disseminate that information). 1980 is considered to be the base year. The Information Transparency Index (ITI) has scores for initially 153 countries in 1980, increasing over time to 191 by the year 2010.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1980

Time-series max. year: 2010

Total N. of countries covered: 191

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.22.3 Transparency Index

QoG Code: diat_ti

Transparency Index. Combined index of Information Transparency Index and Accountability Transparency Index.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1980

Time-series max. year: 2010

Total N. of countries covered: 188

Overall country availability

Time-series availability

4.23 Dataset of Electoral Volatility in Western Europe

Dataset by: Vincenzo Emanuele

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Emanuele, V. (2015). Dataset of electoral volatility and its internal components in western europe (1946-2015). <https://doi.org/10.7802/1112>

Dataset found at: <http://www.vincenzoemanuele.com/dataset-of-electoral-volatility.html>

Last update by original source: 2022-10-03

Date of download: 2022-10-17

This dataset provides data on electoral volatility and its internal components in parliamentary elections (lower house) in 20 countries of Western Europe for the period 1945-2020. It covers the entire universe of Western European elections held after World War II under democratic regimes. Data for Greece, Portugal and Spain have been collected after their democratizations in the 1970s. Altogether, a total of 347 elections (or, more precisely, electoral periods) are included.

When several elections were held in a single year, the data for the last election is included in the QoG dataset.

4.23.1 Electoral Volatility - Parties above 1%

QoG Code: dev_altv1

Electoral volatility caused by vote switching between existing parties, namely parties receiving at least 1% of the national share in both elections under scrutiny.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2021
N. of countries: 20

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2022
Total N. of countries covered: 22

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.23.2 Electoral Volatility - Parties below 1%

QoG Code: dev_othv1

Electoral volatility caused by vote switching between parties falling below 1% of the national share in both the elections at time t and $t+1$. It is important to clarify that this category is not computed by aggregating the scores of each party falling below 1% and then comparing the overall sum at time t and $t+1$. Conversely, each party's volatility is counted separately - up to a specification of 0.1% - and then added to the calculation of dev_othv. This choice has been made to avoid underestimation of Total Volatility but at the same time to maintain a distinction between parties above 1% and parties below 1% for the calculation of the two components of dev_regv and dev_altv.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2017 Cross-section max. year: 2021 N. of countries: 20	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 22
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.23.3 Electoral Volatility - Parties entering/exiting party system

QoG Code: dev_regv1

Electoral volatility caused by vote switching between parties that enter or exit from the party system. A party is considered as entering the party system where it receives at least 1% of the national share in election at time $t+1$ (while it received less than 1% in election at time t). Conversely, a party is considered as exiting the party system where it receives less than 1% in election at time $t+1$ (while it received at least 1% in election at time t).

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2017 Cross-section max. year: 2021 N. of countries: 20	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 22
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.23.4 Electoral Volatility - Total

QoG Code: dev_tv1

Total electoral volatility in the party system, given by the sum of the previous measures: $dev_regv + dev_altv + dev_othv = dev_tv$.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2017 Cross-section max. year: 2021 N. of countries: 20	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 22
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.24 Dataset of Electoral Volatility in the European Parliament elections since 1979

Dataset by: Emanuele, Angelucci, Marino, Puleo and Vegetti

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Emanuele, V., Angelucci, D., Marino, B., Puleo, L., & Vegetti, F. (2020). The congealing of a new cleavage? the evolution of the demarcation bloc in europe (19792019). *Italian Political Science Review*, 1–20. <https://doi.org/10.1017/ipo.2020.19>

Dataset found at: <http://www.vincenzoemanuele.com/dataset-of-electoral-volatility-in-ep-elections.html>

Last update by original source: 2019-06-22

Date of download: 2022-10-17

This dataset provides data on electoral volatility and its internal components in the elections for the European Parliament (EP) in all European Union (EU) countries since 1979 or the date of their accession to the Union. It also provides data about electoral volatility for both the class bloc and the demarcation bloc. This dataset will be regularly updated so as to include the next rounds of the European Parliament elections.

4.24.1 Electoral Volatility in the EP - Parties above 1%

QoG Code: `evep_altv`

Electoral volatility in the European Parliament, caused by vote switching between parties that enter or exit from the party system caused by vote switching between existing parties, namely parties receiving at least 1% of the national share in both elections under scrutiny.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019	Time-series min. year: 1984
Cross-section max. year: 2019	Time-series max. year: 2019
N. of countries: 28	Total N. of countries covered: 29

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.24.2 Net change in the agg. vote share for all parties in Class Bloc (EP)

QoG Code: `evep_classbloc`

Net change in the aggregate vote share for all parties included in the Class Bloc. For the definition of the class bloc and the identification of parties included in such bloc, the author relies on Bartolini and Mair (1990) and Bartolini (1983; 2000). This includes 'those parties which are the historical product of the structuring of the working-class movement' (Bartolini and Mair 1990 [2007], 46). Full list of parties in the class bloc can be found in the original codebook.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 28

Available in Time-series

Time-series min. year: 1984
Time-series max. year: 2019
Total N. of countries covered: 29

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.24.3 Net change in the agg. vote share for all parties in Demarcation Bloc (EP)

QoG Code: evep_dembloc

Net change in the aggregate vote share for all parties included in the Demarcation Bloc. Those political parties that defend anti-EU, anti-immigration and economically protectionist policies are included in the demarcation bloc. Full list of parties in the demarcation bloc can be found in the original codebook.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 20	Time-series min. year: 1984 Time-series max. year: 2019 Total N. of countries covered: 20
Overall country availability	Time-series availability

4.24.4 Electoral Volatility in the EP - Parties below 1%

QoG Code: evep_othv

Electoral volatility in the European Parliament, caused by vote switching between parties falling below 1% of the national share in both the elections at time t and $t+1$. It is important to clarify that this category is not computed by aggregating the scores of each party falling below 1% and then comparing the overall sum at time t and $t+1$. Conversely, each party's volatility is counted separately - up to a specification of 0.1% - and then added to the calculation of evep_othv. This choice has been made to avoid underestimation of Total Volatility but at the same time to maintain a distinction between parties above 1% and parties below 1% for the calculation of the two components of evep_regv and evep_altv.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 28	Time-series min. year: 1984 Time-series max. year: 2019 Total N. of countries covered: 29
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.24.5 Electoral Volatility in the EP - Parties entering/exiting party system

QoG Code: epep_regv

Electoral volatility in the European Parliament, caused by vote switching between parties that enter or exit from the party system. A party is considered as entering the party system where it receives at least 1% of the national share in election at time t+1 (while it received less than 1% in election at time t). Conversely, a party is considered as exiting the part system where it receives less than 1% in election at time t+1 (while it received at least 1% in election at time t).

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 28	Time-series min. year: 1984 Time-series max. year: 2019 Total N. of countries covered: 29
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.24.6 Electoral Volatility in the EP - Total

QoG Code: evep_tv

Total electoral volatility in the party system, given by the sum of the previous measures: $evep_regv + evep_altv + evep_othv = evep_tv$.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 28	Time-series min. year: 1984 Time-series max. year: 2019 Total N. of countries covered: 29
Overall country availability	Time-series availability

4.25 Democratic Electoral Systems Around the World 1946-2020

Dataset by: Bormann and Golder

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Bormann, N.-C., & Golder, M. (2022). Democratic electoral systems around the world, 1946–2020. *Electoral Studies, Forthcoming*

Dataset found at: <http://mattgolder.com/elections>

Last update by original source: 2021-05-18

Date of download: 2022-09-26

The data focus on national-level (lower house) legislative and presidential elections in democratic regimes. Previously, the authors identified democratic regimes based on the Democracy-Dictatorship (DD) classification scheme set out in Cheibub, Gandhi and Vreeland (2010). According to this classification scheme, a regime is democratic if (i) the chief executive is elected, (ii) the legislature is elected, (iii) there is more than one party competing in elections, and (iv) an alternation under identical electoral rules has taken place (alternation rule). A regime is dictatorial if any of these four conditions do not hold. While the 4.0 version of DES dataset continues to classify elections as democratic according to these coding rules, it also classifies elections as democratic based on four other commonly-used coding schemes as well: Boix-Miller-Rosato (BMR, 2012), Freedom House (FH, 2021), Polity5 (2020), and Varieties of Democracy (V-Dem, 2021).

Note: The original values of -99 (the information is missing but should theoretically be available) and -88 (there is no single value for this particular variable) have been recoded to "." (missing).

4.25.1 Average District Magnitude

QoG Code: `gol_adm`

Average district magnitude in an electoral tier. This is calculated as the total number of seats allocated in an electoral tier divided by the total number of districts in that tier.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 123

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016
Total N. of countries covered: 142

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.2 Districts

QoG Code: gol_dist

This is the number of electoral districts or constituencies in an electoral tier.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 123

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016
Total N. of countries covered: 142

Overall country availability

Time-series availability

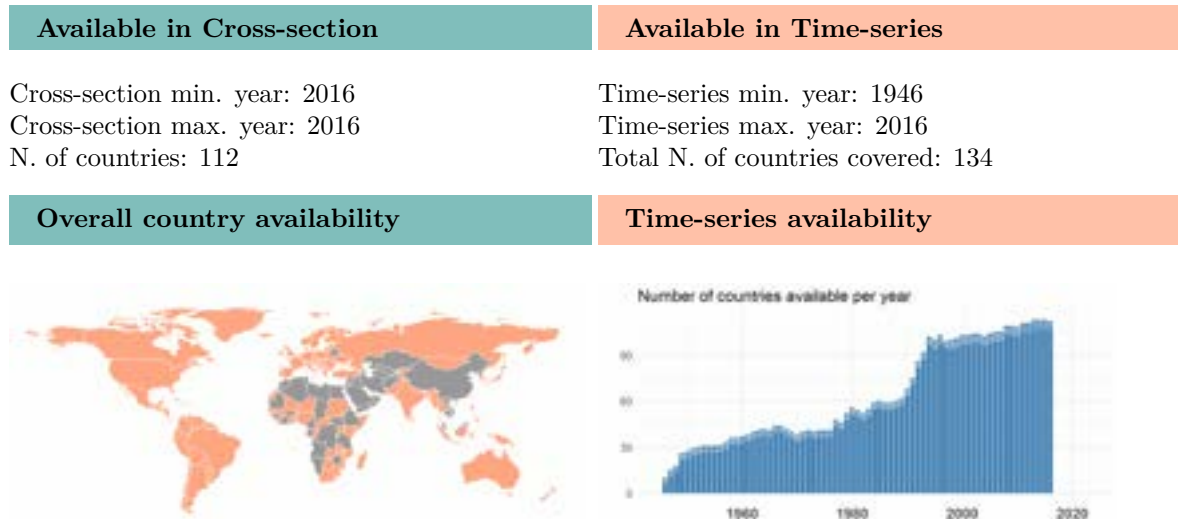

[Find more information about this variable in the QoG Data Finder](#)

4.25.3 Effective Number of Electoral Parties

QoG Code: gol_enep

Effective number of electoral parties.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.25.4 Effective Number of Electoral Parties 1

QoG Code: gol_enepl

The effective number of electoral parties once the "other" category has been "corrected" by using the least component method of bounds.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.5 Effective Number of Electoral Parties (Others)

QoG Code: gol_enepo

The percentage of the vote going to parties that are collectively known as "others" in official election results.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 112

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016
Total N. of countries covered: 134

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.6 Effective Number of Parliamentary or Legislative Parties

QoG Code: gol_enpp

The effective number of parliamentary (legislative) parties.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 118	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 139
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.7 Effective Number of Parliamentary or Legislative Parties, other corrected

QoG Code: gol_enpp1

This is the effective number of parliamentary (legislative) parties once the "other" category has been "corrected" by using the least component method of bounds.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 118	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 138

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.8 Effective Number of Parliamentary or Legislative Parties (Others)

QoG Code: gol_enppo

The percentage of seats won by parties that are collectively known as "others" in official election results.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 118

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016
Total N. of countries covered: 138

4.25.9 Effective Number of Presidential Candidates

QoG Code: gol_enpres

The effective number of presidential candidates.

Type of variable: Discrete

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 68	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 78
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.10 Electoral System Type-3 classes

QoG Code: gol_est

This is a categorical variable that takes on one of three values indicating the basic type of electoral system used in the elections.

1. Majoritarian
2. Proportional
3. Mixed

Type of variable: Categorical

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 123	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 143

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.11 Electoral System Type-11 classes

QoG Code: `gol_est_spec`

This is a categorical variable that provides a more detailed indication of the type of electoral system used in the election.

1. Single-Member-District-Plurality (SMDP)
2. Two-Round System (TRS)
3. Alternative Vote (AV)
4. Borda Count (BC)
5. Block Vote (BV)
6. Party Block Vote (PBV)
7. Limited Vote (LV)
8. Single Nontransferable Vote (SNTV)
9. List Proportional Representation (List PR)
10. Single Transferable Vote (STV)
11. Mixed Dependent (or Mixed Member Proportional)
12. Mixed Independent (or Mixed Parallel)

Type of variable: Categorical

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 123

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016
Total N. of countries covered: 143

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.25.12 Institution

QoG Code: `gol_inst`

This is a categorical variable indicating a country's regime type at the end of a given year. The data for this variable come from Cheibub, Gandhi and Vreeland (2010), which we updated through 2011.

0. Parliamentary democracy
1. Semi-presidential democracy
2. Presidential democracy
3. Civilian dictatorship
4. Military dictatorship
5. Royal dictatorship

Not all elections that occur when a regime is classified as a dictatorship (regime = 4-6) are dictatorial. This apparent anomaly has to do with the fact that a country's regime type is coded based on its status at the end of a given year. Elections like those in Argentina 1962, Nicaragua 1983, Philippines 1965, and Thailand 1976 all preceded a democratic collapse in the same year. Although these countries are considered dictatorial at the end of these years, we code these particular elections as democratic and therefore include them in our data set. We should note that we code the 1997 elections in Kenya, the 1999 elections in Guinea Bissau, the 2005 elections in Liberia, the 2006 elections in Mauritania, and the 2008 elections in Bangladesh as democratic even though Cheibub, Gandhi and Vreeland (2010) do not code these countries as democratic until the following year. The reason for this is that these elections are the primary reason cited by Cheibub, Gandhi and Vreeland (2010) for their eventual recoding of these countries as democratic. As an example, Cheibub, Gandhi and Vreeland (2010) do not code Liberia as democratic until 2006 despite the fact that presidential elections took place in October 2005, because the winner of these elections, Ellen Johnson-Sirleaf, did not officially take office until January 2006. The bottom line is that there are a few observations in our data set of democratic elections where regime indicates that the country was a dictatorship by the end of the year.

Type of variable: Categorical

Available in Cross-section	Available in Time-series

[Find more information about this variable in the QoG Data Finder](#)

4.25.13 Mixed Type

QoG Code: gol_mix

This is a categorical variable that indicates the precise type of mixed electoral system that is being used.

1. Coexistence
2. Superposition
3. Fusion
4. Correction
5. Conditional

Type of variable: Categorical

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 20	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 38

4.25.17 Electoral Formula used in an Electoral Tier

QoG Code: gol_pr

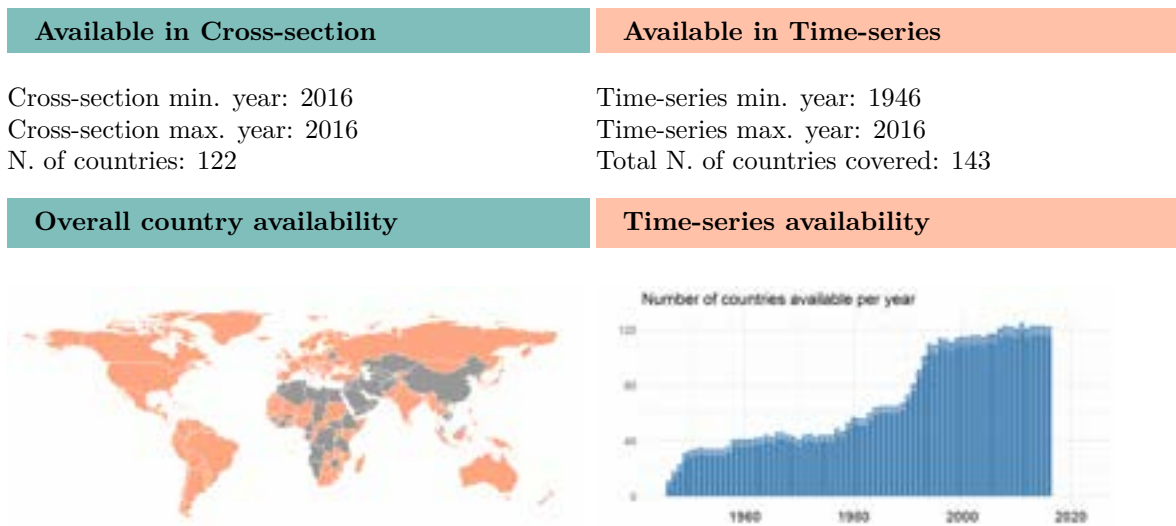

This is a categorical variable that indicates the precise electoral formula used in an electoral tier.

1. Single-Member-District-Plurality (SMDP)
2. Two Round Majority-Plurality
3. Two Round Qualified Majority
4. Two Round Majority Runoff
5. Alternative Vote (AV)
6. Borda Count (BC)
7. Modified Borda Count (mBC)
8. Block Vote (BV)
9. Party Block Vote (PBV)
10. Limited Vote (LV)
11. Single Nontransferable Vote (SNTV)
12. Hare quota
13. Hare quota with largest remainders
14. Hare quota with highest average remainders
15. Hagenbach-Bischoff quota

16. Hagenbach-Bischoff quota with largest remainders
17. Hagenbach-Bischoff quota with highest average remainders
18. Droop quota
19. Droop quota with largest remainders
20. Droop quota with highest average remainders
21. Imperiali quota
22. Imperiali quota with largest remainders
23. Imperiali quota with highest average remainders
24. Reinforced Imperiali quota
25. D'Hondt
26. Sainte-Laguë
27. Modified Sainte-Laguë
28. Single Transferable Vote.

Note: Users can find a detailed description of the difference between types in the original codebook.

Type of variable: Categorical

4.26 Economic Freedom of the World Dataset

Dataset by: Fraser Institute

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Gwartney, J., Lawson, R., Hall, J., & Murphy, R. (2022). Economic Freedom Dataset, published in Economic Freedom of the World: 2022 Annual Report. *Fraser Institute*. <https://www.fraserinstitute.org/economic-freedom/dataset>

Dataset found at: <https://www.fraserinstitute.org/economic-freedom/dataset>

Last update by original source: 2021-06-15

Date of download: 2021-11-10

The index published in Economic Freedom of the World measures the degree to which countries' policies and institutions support economic freedom. The cornerstones of economic freedom are personal choice, voluntary exchange, freedom to enter markets and compete, and security of the person and privately owned property. The EFW index now ranks 165 countries and territories. Data are available for more than 100 nations and territories back to 1950. This dataset makes it possible for scholars to analyze the impact of both cross-country differences in economic freedom and changes in that freedom across a time frame of three and a half decades.

For a consistent time series for a particular country and/or longitudinal data for a panel of countries, the Fraser Institute previously developed and reported a chain-linked version of the index. The EFW Panel Dataset is now entirely based on the chain-linking method, having the base year as 2020, and they will make the most recent years data the base year in the future.

Changes in a countrys scores backward

in time are based only on changes in components that were present in adjoining years. It should be noted that the EFW Panel Dataset contains area and summary ratings only for those years in which the country received a regular EFW index rating.

4.26.1 Freedom to Trade Internationally (current)

QoG Code: `fi_ftradeint`

The index ranges from 0-10 where 0 corresponds to "increasing tax rate on international trade", "slow import or export process", "small trade sectors relative to the population and geographic size", "exchange rate controls are present and a black-market exists", and "restrictions on the freedom of citizens to engage in capital market exchange with foreigners" and 10 corresponds to "no specific taxes on international trade", "swift import or export process", "large trade sectors relative to the population and geographic size", "no black-market exchange rate", and "no restrictions on the freedom of citizens to engage in capital market exchange with foreigners". The index consists of the following indicators: Taxes on international trade, Regulatory trade barriers, Actual size of trade sector compared to expected size, Difference between official exchange rate and black market rate, and International capital market controls.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 164	Time-series min. year: 1970 Time-series max. year: 2020 Total N. of countries covered: 167

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.26.3 Economic Freedom of the World Index (current)

QoG Code: fi_index

The index is founded upon objective components that reflect the presence (or absence) of economic freedom. The index comprises 21 components designed to identify the consistency of institutional arrangements and policies with economic freedom in five major areas: size of government (fi_sog), legal structure and security of property rights (fi_legprop), access to sound money (fi_sm), freedom to trade internationally (fi_ftradeint), regulation of credit, labor and business (fi_reg). The index ranges from 0-10 where 0 corresponds to "less economic freedom" and 10 to "more economic freedom". This is the version of the index published at the current year of measurement, without taking methodological changes over time into account.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 164

Available in Time-series

Time-series min. year: 1970
Time-series max. year: 2020
Total N. of countries covered: 167

[Find more information about this variable in the QoG Data Finder](#)

4.26.4 Economic Freedom of the World Index (historical data for 1950-1965)

QoG Code: fi_index_hist

The index is founded upon objective components that reflect the presence (or absence) of economic freedom. The index ranges from 0-10 where 0 corresponds to "less economic freedom" and 10 to "more economic freedom".

The numbers found here are an extension of the panel data index using a smaller number of variables. These numbers are an improvement on what was published previously on economic freedom from 1950-1965, with more countries covered and using data sources. For more information, please see the chapter, "Economic Freedom of the World: 1950s and 1960s" found in the Economic Freedom of the World 2019 annual report.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1950

Time-series max. year: 1965

Total N. of countries covered: 105

Overall country availability

4.27 Educational Attainment Dataset

Dataset by: Barro and Lee

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Barro, R. J., & Lee, J. W. (2013). A new data set of educational attainment in the world, 1950–2010. *Journal of Development Economics*, 104, 184–198

Lee, J.-W., & Lee, H. (2016). Human capital in the long run. *Journal of Development Economics*, 122, 147–169

Dataset found at: <http://www.barrolee.com/>

Last update by original source: 2021-09-01

Date of download: 2022-08-15

The Barro-Lee Data set provides data dis-aggregated by sex and by 5-year age intervals. It provides educational attainment data for 146 countries in 5-year intervals from 1950 to 2010. It also provides information about the distribution of educational attainment of the adult population over age 15 and over age 25 by sex at seven levels of schooling - no formal education, incomplete primary, complete primary, lower secondary, upper secondary, incomplete tertiary, and complete tertiary. Average years of schooling at all levels - primary, secondary, and tertiary - are also measured for each country and for regions in the world.

This is the latest updated version of the Barro-Lee dataset reported in Barro and Lee (2013). Dr. Hanol Lee, an associate professor at Southwestern University of Finance and Economics, has collaborated on the project.

The main aim of this new version is to construct estimates of educational attainment for the population between 15 and 64 years old for the year of 2015. The estimates are disaggregated by gender and by 10-year age group, whereas those in the original dataset were disaggregated by 5-year age group. This is due to the limited availability of disaggregated statistics in the newly compiled census/survey data.

4.27.1 Average schooling years, female

4.28 Electoral Integrity Project (Version 8.0)

Dataset by: Garnett, James and MacGregor

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Garnett, H. A., James, T. S., & MacGregor, M. (2022). Perceptions of Electoral Integrity, (PEI-8.0) [V1, UNF:6:IINJ6KG6BcEwGIXz7tM4Yg== [fileUNF]]. <https://doi.org/10.7910/DVN/YSNYXD>

Dataset found at: <https://dataverse.harvard.edu/dataverse/PEI>

Last update by original source: 2022-05-19

Date of download: 2022-09-01

This dataset by the Electoral Integrity Project evaluates the quality of elections held around the world. Based on a rolling survey collecting the views of election experts, this research provides independent and reliable evidence to compare whether countries meet international standards of electoral integrity. PEI-8.0 cumulative release covers 480 national parliamentary and presidential contests held worldwide in 169 countries from 1 July 2012 to 31 December 2021.

4.28.1 Electoral Integrity Rating

QoG Code: pei_eir

Overall how would you rate the integrity of this election on a scale from 1 (very poor) to 10 (very good)?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2021

[Find more information about this variable in the QoG Data Finder](#)

4.28.2 Perception of Electoral Integrity Index

QoG Code: pei_peii

The PEI index is designed to provide an overall summary evaluation of expert perceptions that an election meets international standards and global norms. It is generated at the individual level using experts' answers to the 49 substantive variables below. Therefore, an Index score is missing if an expert does not answer a question. The 49 scores are summed and then standardized to a 100 point scale.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

4.29.2 Electoral System for the National Legislature

QoG Code: `ideaesd_esnl`

Electoral System for National Legislature:

1. List Proportional Representation (List PR)

Under a List Proportional Representation (List PR) system each party or grouping presents a list of candidates for a multi-member electoral district, the voters vote for a party, and parties receive seats in proportion to their overall share of the vote. In some (closed list) systems the winning candidates are taken from the lists in order of their position on the lists. If the lists are 'open' or 'free' the voters can influence the order of the candidates by marking individual preferences.

2. Block Vote (BV)

Block Vote is a plurality/majority system used in multi-member districts. Electors have as many votes as there are candidates to be elected. The candidates with the highest vote totals win the seats. Usually voters vote for candidates rather than parties and in most systems may use as many, or as few, of their votes as they wish.

3. First Past the Post (FPTP)

First Past The Post is the simplest form of plurality/majority electoral system. The winning candidate is the one who gains more votes than any other candidate, even if this is not an absolute majority of valid votes. The system uses single-member districts and the voters vote for candidates rather than political parties.

4. Two-Round System (TRS)

The Two-Round System is a plurality/majority system in which a second election is held if no candidate or party achieves a given level of votes, most commonly an absolute majority (50 per cent plus one), in the first election round. A Two-Round System may take a majority-plurality form-more than two candidates contest the second round and the one wins the highest number of votes in the second round is elected, regardless of whether they have won an absolute majority-or a majority run-off form-only the top two candidates in the first round contest the second round.

5. Mixed Member Proportional (MMP)

Mixed Member Proportional is a mixed system in which the choices expressed by the voters are used to elect representatives through two different systems-one List PR system and (usually) one

plurality/majority system-where the List PR system compensates for the disproportionality in the results from the plurality/majority system.

6. Single Transferable Vote (STV)

The Single Transferable Vote is a preferential system in which the voter has one vote in a multi-member district and the candidates that surpass a specified quota of first preference votes are immediately elected. In successive counts, votes are redistributed from least successful candidates, who are eliminated, and votes surplus to the quota are redistributed from successful candidates, until sufficient candidates are declared elected. Voters normally vote for candidates rather than political parties, although a party-list option is possible.

7. Alternative Vote (AV)

The Alternative Vote is a preferential plurality/majority system used in single-member districts. Voters use numbers to mark their preferences on the ballot paper. A candidate who receives an absolute majority (50 per cent plus 1) of valid first preference votes is declared elected. If no candidate achieves an absolute majority of first preferences, the least successful candidates are eliminated and their votes reallocated according to their second preferences until one candidate has an absolute majority. Voters vote for candidates rather than political parties.

8. Single Non-Transferable Vote (SNTV)

Under the Single Non-Transferable Vote system voters cast a single vote in a multi-member district. The candidates with the highest vote totals are declared elected. Voters vote for candidates rather than political parties.

9. Two-Round System, Party Block Vote (TRS PBV)

Party Block Vote (PBV) is a plurality/majority system using multi-member districts in which voters cast a single party-centered vote for a party of choice, and do not choose between candidates. The party with the most votes will win every seat in the electoral district.

10. Limited Vote (LV)

Limited Vote is a candidate-centred electoral system used in multi-member districts in which electors have more than one vote, but fewer votes than there are candidates to be elected. The candidates with the highest vote totals win the seats.

11. First Past The Post, Party Block Vote (FPTP PBV)

12. First Past the Post, List Proportional Representation (FPTP List PR)

13. First Past the Post, Block Vote (FPTP BV)

14. First Past the Post, Party Block Vote, List Proportional Representation (FPTP PBV List PR)

15. Parallel

A Parallel System is a mixed system in which the choices expressed by the voters are used to elect representatives through two different systems-one List PR system and (usually) one plurality/majority system-but where no account is taken of the seats allocated under the first system in calculating the results in the second system.

16. In transition

17. Modified Borda Count (Modified BC)

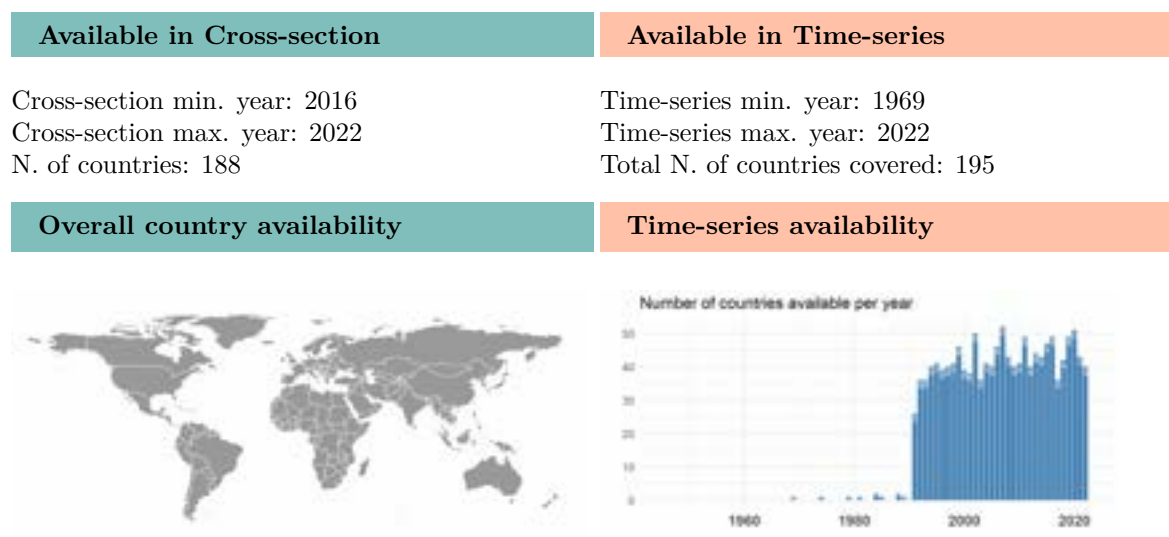

Borda Count (BC) - A candidate-centred preferential system used in either single- or multimember districts in which voters use numbers to mark their preferences on the ballot paper and each preference marked is then assigned a value using equal steps. These are summed and the candidate(s) with the

highest total(s) is/are declared elected.

18. Two-Round System, Party Block Vote, List Proportional Representation (TRS PBV List PR)

19. No direct elections.

Type of variable: Discrete

[Find more information about this variable in the QoG Data Finder](#)

4.29.3 Electoral System for the President

QoG Code: `ideaesd_esp`

Electoral System for the President:

1. Two-Round System (TRS)

The Two-Round System is a plurality/majority system in which a second election is held if no candidate or party achieves a given level of votes, most commonly an absolute majority (50 per cent plus one), in the first election round. A Two-Round System may take a majority-plurality form-more than two candidates contest the second round and the one who wins the highest number of votes in the second round is elected, regardless of whether they have won an absolute majority-or a majority run-off form-only the top two candidates in the first round contest the second round.

2. First Past the Post (FPTP)

First Past The Post is the simplest form of plurality/majority electoral system. The winning candidate is the one who gains more votes than any other candidate, even if this is not an absolute majority of valid votes. The system uses single-member districts and the voters vote for candidates rather than political parties.

3. Supplementary Vote (SV)

Supplementary vote: Voters can rank up to three candidates, and if no candidate wins a majority in the first round of voting, second and third preferences from ballots whose first preference candidate has been eliminated are used to determine the winner.

4. Single Transferable Vote (STV)

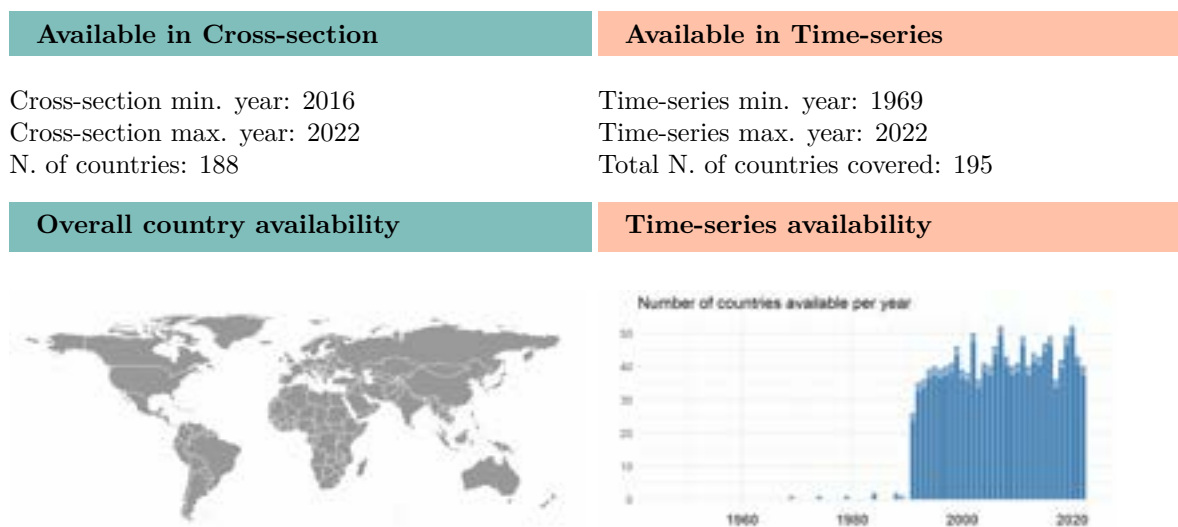

The Single Transferable Vote is a preferential system in which the voter has one vote in a multi-member district and the candidates that surpass a specified quota of first preference votes are immediately elected. In successive counts, votes are redistributed from least successful candidates, who are eliminated, and votes surplus to the quota are redistributed from successful candidates, until sufficient candidates are declared elected. Voters normally vote for candidates rather than political parties, although a party-list option is possible.

4.30 Electoral Systems and the Personal Vote

Dataset by: Johnson and Wallack

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Johnson, J. W., & Wallack, J. S. (2012). Electoral systems and the personal vote. <https://doi.org/1902.1/17901>

Dataset found at: <https://dataverse.harvard.edu/dataset.xhtml?persistentId=hdl:1902.1/17901>

Last update by original source: 2012-03-24

Date of download: 2022-12-07

This database updates and expands the coding of electoral systems presented in Gaviria et al.'s (2003) Database of Particularism. Data now cover up to 180 countries from 1978-2005 and distinguish electoral systems by the degree to which electoral institutions create incentives for candidates to cultivate a personal vote - as described theoretically in Carey and Shugart (1995) and Gaviria et al. (2003) - including the amount of vote pooling among co-partisan candidates, the amount of parties' control over ballot access, and whether voters cast their votes for candidates or parties. The database also contains several variables that rank-order electoral systems by tier, distinguish mixed-member and other multi-tier electoral systems, capture district magnitude (in two ways), and record election years. Database created 2007. Database last updated 2010.

4.30.1 Party Control over Ballot (lower/only house)

QoG Code: `jw_avgbalot`

Country-level weighted averages of Party Control over Ballot - SMD (lower/only house) (`jw_smdbalot`) and Party Control over Ballot - MMD (lower/only house) (`jw_mmdbalot`), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of ballots for the average member sitting in the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 133

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.2 Party Control over Ballot (upper house)

QoG Code: `jw_avgballot2`

Country-level weighted averages of Party Control over Ballot - SMD (upper house) (`jw_smdballot2`) and Party Control over Ballot - MMD (upper house) (`jw_mmdballot2`), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of ballots for the average member sitting in the upper house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 24

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.3 Sharing of Votes among Candidates (lower/only house)

QoG Code: `jw_avgpool`

Country-level weighted averages of Sharing of Votes among Candidates - SMD (lower/only house) (`jw_smdpool`) and Sharing of Votes among Candidates - MMD (lower/only house) (`jw_mmdpool`), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of the pooling of votes for the average member sitting in the lower house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 135

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.4 Sharing of Votes among Candidates (upper house)

QoG Code: `jw_avgpool2`

Country-level weighted averages of Sharing of Votes among Candidates - SMD (upper house) (`jw_smdpool2`) and Sharing of Votes among Candidates - MMD (upper house) (`jw_mmdpool2`), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of the pooling of votes for the average member sitting in the upper house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 24

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.5 Candidate or Party-specific Voting (lower/only house)

QoG Code: `jw_avgvote`

Country-level weighted averages of Candidate- or Party-specific Voting - SMD (lower/only house) (`jw_smdvote`) and Candidate- or Party-specific Voting - MMD (lower/only house) (`jw_mmdvote`), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of votes for the average member sitting in the lower house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates.

The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 131

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.6 Candidate or Party-specific Voting (upper house)

QoG Code: `jw_avgvote2`

Country-level weighted averages of Candidate- or Party-specific Voting - SMD (upper house) (`jw_smdvote2`) and Candidate- or Party-specific Voting - MMD (upper house) (`jw_mmdvote2`), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of votes for the average member sitting in the upper house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates. The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 24

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.7 Bicameral System

QoG Code: `jw_bicameral`

Equals 1 whenever a country has a bicameral legislature.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 171

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.8 Dominant or Populous Tier

QoG Code: `jw_domr`

This variable ranks countries in increasing order of incentives to cultivate a personal vote according to their most dominant or populous tier (or tier with the greater number of legislators). The variable varies from 1 to 13, corresponding to the thirteen positions in Carey & Shugart's (1995) ranking. For example, a country with a ranking of 1 would have a tier with the lowest possible rank of personal vote incentives, and that tier would account for the majority of the members in the assembly.

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 126

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.9 Year of Election (lower/only house)

QoG Code: `jw_election`

Dummy variable, 1 if year of election to lower house.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 152

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.10 Year of Election (upper house)

QoG Code: `jw_election2`

Dummy variable, 1 if year of election to upper house.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 26

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.11 Ballot Access for Independent Candidates (lower/only house)

QoG Code: `jw_indy`

Equals 1 wherever independent candidates are legally allowed (even where the legal requirements are strict), and 0 otherwise. This complements the cases where the ballot variables above equal 1 or 2, since they are adjusted to capture de facto practice. `jw_indy` instead captures the de jure rules. A user could adjust the ballot variables above to be de jure if (s)he replaced values of 2 with values of 1 when `jw_indy = 0`. Refers to lower house elections. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 106

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.12 Ballot Access for Independent Candidates (upper house)

QoG Code: `jw_indy2`

Same as `jw_indy`, but for upper house elections. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not

control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 21

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.13 Number of Coded Legislators (lower/only house)

QoG Code: `jw_legsize`

The number of legislators coded in the dataset. These may not account for the total number of legislators if there are appointed legislators that have no electoral rules to code.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 155

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.14 Number of Coded Legislators (upper house)

QoG Code: `jw_legsize2`

The number of legislators coded in the dataset. These may not account for the total number of legislators if there are appointed legislators that have no electoral rules to code.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 32

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.15 District Magnitude of Average Legislator (lower/only house)

QoG Code: jw_mcand

In keeping with the emphasis on the incentives faced by individual legislators, this variable measures the district magnitude considering the viewpoint of the average legislator in the lower house. It is scored as a weighted average of the various district sizes, where weights are computed as the number of legislators running in the district of each magnitude divided by the total number of seats. For example: A country with 300 seats divided among one national district with 200 members and 100 single-member districts has a magnitude for the average legislator of $[(200*200) + (100*1)]/300$, which yields a figure of 133.67.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 124

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.16 District Magnitude of Average Legislator (upper house)

QoG Code: jw_mcand2

This is the district magnitude of the average legislator in the upper house.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 42

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.17 Average District Magnitude (lower/only house)

QoG Code: `jw_md`

This is the standard magnitude of the average district in the lower house. For example: A country with 300 seats divided among one national district with 200 members and 100 single-member districts would have an average district magnitude (`jw_md`) of 2.97 (i.e., $300/101$).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 160

Overall country availability

Time-series availability

4.30.19 Party Control over Ballot - MMD (lower/only house)

QoG Code: `jw_mmdballot`

Ballot (coded as above) for multi-member district tiers in elections to the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Type of variable: Categorical

Available in Time-series

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.25 Runoff Elections

QoG Code: `jw_multiround`

The variable indicates whether there are run-off elections. These are usually for SMDs with absolute majority requirements. Where `jw_multiround` is equal to 1, voters have more than a single vote to cast, albeit votes occur on separate election days.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 111

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.26 Multi Tier (lower/only house)

QoG Code: jw_multitier

Indicates whether there are two or more tiers to the legislature.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 138

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.27 Multi Tier (upper house)

QoG Code: jw_multitier2

Equals 1 wherever there are multiple allocation tiers, regardless of whether they are the result of mixed member systems that incorporate different members under different rules, or systems that have upper tiers within a single electoral system to compensate for disproportionality in lower tiers.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 28

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.28 Single Party System

QoG Code: `jw_oneparty`

Dummy variable, 1 if single-party system.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 169

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.29 Tiers allocated in Parallel

QoG Code: `jw_parallel`

Coded 1 if multiple tiers are elected in parallel fashion, 0 when they are elected in (at least some-what) compensatory fashion. Is coded only when `jw_multitier = 1`.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 21

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.30 Personalistic Tier

QoG Code: `jw_persr`

This variable ranks countries in increasing order of incentives to cultivate a personal vote according to their more personalistic tier (or tier with the greater incentives to cultivate a personal vote). The variable varies from 1 to 13, corresponding to the thirteen positions in Carey & Shugart's (1995) ranking. For example, a country with a ranking of 13 would have a tier with the highest possible rank of incentives to cultivate a personal vote, although that tier may only account for a minority or small fraction of its members.

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 127

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.31 Proportion Coded Legislators (lower/only house)

QoG Code: `jw_propcoded`

Shows the proportion of total legislators (elected and non-elected) that are included in the database (i.e. those that are elected).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 170

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.32 Proportion Coded Legislators (upper house)

QoG Code: `jw_propcoded2`

This is the proportion of the total number of legislators (elected and non-elected) that are coded.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 51

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.33 Seats from Multi-Member Districts (lower/only house)

QoG Code: `jw_propmmd`

Proportion of seats from Multi-Member District (lower/only house).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 155

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.34 Seats from Multi-Member Districts (upper house)

QoG Code: `jw_propmmd2`

This is the proportion of coded legislators elected in multi-member districts.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 26

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.35 Seats from a National District (lower/only house)

QoG Code: `jw_propn`

The proportion of legislators that are elected via a national tier.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 169

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.36 Seats from a National District (upper house)

QoG Code: `jw_propn2`

This is the proportion of coded legislators that are elected via a national tier. This is often (but not always) similar to the proportion elected via multi-member districts (`jw_propmmd`): some electoral systems have proportional representation based on regional multimember districts as well as national tiers (e.g. Hungary).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 66

Overall country availability

Proportion of seats from Single-Member Districts.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978

Time-series max. year: 2005

Total N. of countries covered: 155

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.38 Seats from Single-Member Districts (upper house)

QoG Code: `jw_propsmd2`

This is the proportion of coded legislators elected in single-member districts (Note: In the original data for Kyrgyzstan $\text{propsmd2}=60$ in 1997-1999 and $\text{propsmd2}=45$ 2000-2004. We have replaced these figures with missing values).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 23

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.30.39 Rank Vote (lower/only house)

QoG Code: `jw_rank`

Equals 1 in two circumstances: where voters may rank order candidates according to preference, or where citizens have multiple preference votes for multiple candidates, even if they may not specifically rank the candidates. Otherwise, `jw_rank` is equal to zero. Refers to lower house elections.

Type of variable: Binary

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005

4.30.41 Party Control over Ballot - SMD (lower/only house)

QoG Code: `jw_smdballot`

Ballot for single-member district tiers in elections to the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 71

Overall country availability

Time-series availability

4.30.42 Sharing of Votes among Candidates - SMD (lower/only house)

QoG Code: `jw_smdpool`

Pool for single-member district tiers in elections to the lower house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005

4.30.43 Candidate or Party-specific Voting - SMD (lower/only house)

QoG Code: `jw_smdvote`

Vote for single-member district tiers in elections to the lower house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates. The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1978
Time-series max. year: 2005
Total N. of countries covered: 73

4.31 Enterprise Surveys

Dataset by: The World Bank Group

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

The World Bank. (2022). World bank enterprise surveys. <https://www.enterprisesurveys.org/en/enterprisesurveys>

Dataset found at: <https://www.enterprisesurveys.org/en/data>

Date of download: 2023-01-13

World Bank Enterprise Surveys offer an expansive array of economic data on 180,000 firms in 154 countries. The data is presented in a variety of ways useful to researchers, policy makers, journalists, and others.

Business environment and performance indicators are created by computing weighted averages of businesses responses to questions in the Enterprise Survey using sampling weights. Indicators are displayed at the country level but can be viewed by firm subgroups in the original source.

4.31.1 Bribery Depth

QoG Code: ens_brdep

The depth of Bribery is the percentage of instances in which a firm was either expected or requested to provide a gift or informal payment during solicitations for public services, licenses or permits. This measure uses data from 6 survey questions for each firm. For purposes of computation, a refusal to answer a particular survey question is considered an affirmative answer.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2021

N. of countries: 88

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.31.2 Bribery Incidence

QoG Code: ens_brinc

The percent of firms experiencing at least one bribe payment request across 6 public transactions dealing with utilities access, permits, licenses, and taxes.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2021

N. of countries: 88

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.31.3 Giving gifts to get a construction permit

QoG Code: ens_con

Percentage of firms expected to give gifts or informal payments to get a construction permit.

4.32 Environmental Performance Index Data 2022

Dataset by: Environmental Performance Index

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Wolf, M., W., E. J., C., E. D., de Sherbinin, A., & Wendling, e. a., Z. A. (2022). 2022 environmental performance index [Date accessed: 17 October 2022]. *New Haven, CT: Yale Center for Environmental Law and Policy.* epi.yale.edu

Dataset found at: <https://epi.envirocenter.yale.edu/epi-downloads>

Last update by original source: 2022-06-06

Date of download: 2022-10-17

The Environmental Performance Index provides a ranking that shines light on how each country manages environmental issues. The Environmental Performance Index (EPI) ranks how well countries perform on high-priority environmental issues in two broad policy areas: protection of human health from environmental harm and protection of ecosystems. Within these two policy objectives the EPI scores country performance in 11 issue areas comprised of 32 indicators. Indicators in the EPI measure how close countries are to meeting internationally established targets or, in the absence of agreed-upon targets, how they compare to the range of observed countries.

Note: In many cases the EPI variables lack actual observations and rely on imputation. Please refer to the original documentation on more information about this. Also, some values (usually the value 0) are very unlikely, please use your judgement whether to treat these as the value 0 or as "Data missing".

The values on the EPI, Policy Objectives, and Issue Categories are not comparable over time, therefore, this compilation only includes data on these variables from the latest release. The raw data on the 32 indicators, however, are comparable over time and, therefore, time-series are included.

4.32.1 Agriculture Issue Category

QoG Code: epi_agr

Agriculture Issue Category consists of the Sustainable Nitrogen Management Index, which measures the Euclidean distance from an ideal point with optimal nitrogen use efficiency (NUE) and crop yield. The issue category varies from 0 to 100.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2021

4.32.2 Air Quality Issue Category

QoG Code: epi_air

Air Quality Issue Category consists of three indicators:

- 1) Household air pollution (HAP), measured with the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons due to the health risk posed by the incomplete combustion of solid fuels. It is log-transformed and given 40% weight in the aggregation.
- 2) Ambient particulate matter pollution, measured as the PM2.5 exposure using the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to fine air particulate matter smaller than 2.5 micrometers (PM2.5). It is log-transformed and given 55% weight in the aggregation.
- 3) Ozone exposure, measured by the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to ground-level ozone pollution. It is log-transformed and given 5% weight in the aggregation.

The issue category varies from 0 to 100.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2021
Cross-section max. year: 2021
N. of countries: 180

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.32.3 Biodiversity and Habitat Issue Category

QoG Code: epi_bdh

Biodiversity and Habitat Issue Category consists of 7 indicators:

- 1) The terrestrial biome protection (national weights) indicator. It is calculated by first taking proportions of the area of each of a country's biome types that are covered by protected areas and then constructing a weighted sum of the protection percentages for all biomes within that country. The protection percentages are weighted according to the prevalence of each biome type within that country. This indicator evaluates a country's efforts to achieve 17% protection for all biomes within its borders, as per Aichi Target 11. It is given 20% weight in the aggregation.
- 2) The terrestrial biome protection (global weights) indicator, where protection percentages are weighted according to the global prevalence of each biome type. This indicator evaluates a country's contribution toward the global 17% protection goal. It is given 20% weight in the aggregation.
- 3) The marine protected areas indicator, measured as a percentage of a country's total exclusive economic zone (EEZ) designated as marine protected areas (MPAs). Because each country may have multiple EEZs, the summed area of MPAs is divided by the summed EEZ. It is given 20% weight in the aggregation.
- 4) The Protected Areas Representativeness Index (PARI), which measures ecological representativeness as the proportion of biologically scaled environmental diversity included in a country's terrestrial protected areas. The measure relies on remote sensing, biodiversity informatics, and global modeling of fine-scaled variation in biodiversity composition for plant, vertebrate, and invertebrate species. It is given 10% weight in the aggregation.
- 5) Species Habitat Index (SHI) estimates potential population losses, as well as regional and global extinction risks of individual species, using habitat loss as a proxy. The SHI indicator measures the proportion of suitable habitat within a country that remains intact for each species in that country relative to a baseline set in the year 2001. It is given 10% weight in the aggregation.
- 6) Species Protection Index (SPI) evaluates the species-level ecological representativeness of each country's protected area network. The SPI metric uses remote sensing data, global biodiversity informatics, and integrative models to map suitable habitat for over 30,000 terrestrial vertebrate, invertebrate, and plant species at high resolutions. It is given 10% weight in the aggregation.
- 7) The Biodiversity Habitat Index (BHI), which estimates the effects of habitat loss, degradation, and fragmentation on the expected retention of terrestrial biodiversity. It is given 10% weight in the

aggregation.

The issue category varies from 0 to 100.

[Find more information about this variable in the QoG Data Finder](#)

4.32.4 Climate Change Issue Category

QoG Code: epi_cch

Climate Change Issue Category consists of 8 indicators:

- 1) The CO₂ growth rate, calculated as the average annual rate of increase or decrease in raw carbon dioxide emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 55% weight in the aggregation.
- 2) The CH₄ growth rate, calculated as the average annual rate of increase or decrease in raw methane emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 15% weight in the aggregation.
- 3) The F-gas growth rate, calculated as the average annual rate of increase or decrease in raw fluorinated gas emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 10% weight in the aggregation.
- 4) The N₂O growth rate, calculated as the average annual rate of increase or decrease in raw nitrous oxide emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 5% weight in the aggregation.
- 5) The black carbon growth rate, calculated as the average annual rate of increase or decrease in black carbon over the years 2005-2014. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 5% weight in the aggregation.

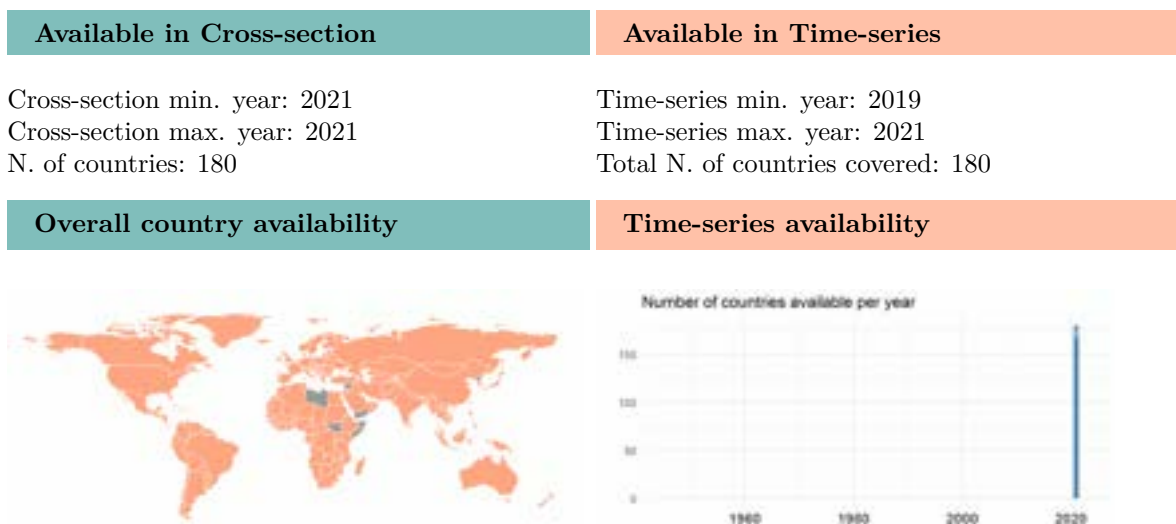

6) Greenhouse gas (GHG) emissions per capita in the year 2017. First, the EPI team calculates total greenhouse gas emissions, applying Global Warming Potentials to convert all units to Gg of CO₂-equivalents. Second, they calculate GHG emissions per capita (GHP) as the GHG emissions divided by population (POP). It is log-transformed and given 2.5% weight in the aggregation.

7) CO₂ emissions from land cover change, calculated over the years 2001-2015. First, the EPI team regresses logged CO₂ emissions from land cover change (LULC) over 15 years to find a slope. Then, they calculate an unadjusted average annual growth rate in these CO₂ emissions. It is given 2.5% weight in the aggregation.

8) The greenhouse gas (GHG) intensity growth rate indicator, which serves as a signal of countries' progress in decoupling emissions from economic growth. The EPI team calculates an annual average growth rate in GHG emissions per unit of GDP over the years 2008-2017. This indicator highlights the need for action on climate change mitigation in countries at all income levels. It is given 5% weight in the aggregation.

The issue category varies from 0 to 100.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.32.5 Ecosystem Services Issue Category

QoG Code: epi_ecs

Ecosystem Services Issue Category consists of 3 indicators:

1) Tree cover loss, measured as a five-year moving average of the percentage of forest lost from the extent of forest cover in the reference year 2000. They define a forest as any land area with over 30% canopy cover. It is log-transformed, $\ln(x + \alpha)$, $\alpha = 9.70E-07$, and given 90% weight in the aggregation.

2) Grassland loss, measured as a five-year moving average of percentage of gross losses in grassland

areas compared to the 1992 reference year. It is log-transformed, $\ln(x + \alpha)$, $\alpha = 4.45\text{E-}06$, and given 5% weight in the aggregation.

3) Wetland loss, measured as a five-year moving average of percentage of gross losses in wetland areas compared to the 1992 reference year. It is log-transformed, $\ln(x + \alpha)$, $\alpha = 2.47\text{E-}06$, and given 5% weight in the aggregation.

The issue category varies from 0 to 100.

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.32.7 Environmental Performance Index

QoG Code: epi_epi

The 2020 Environmental Performance Index (EPI) scores 180 countries on 32 performance indicators across 11 issue categories related to environmental health and ecosystem vitality. The 2020 EPI is a composite index. The EPI researchers begin by gathering data on 32 individual metrics of environmental performance. These metrics are aggregated into a hierarchy beginning with 11 issue categories: Air Quality, Sanitation and Drinking Water, Heavy Metals, Waste Management, Biodiversity and Habitat, Ecosystem Services, Fisheries, Climate Change, Pollution Emissions, Water Resources, and Agriculture.

These issue categories are then combined into 2 policy objectives, Environmental Health and Ecosystem Vitality, and then finally consolidated into the overall EPI. To allow for meaningful comparisons, before aggregation the EPI researchers construct scores for each of the 32 indicators, placing them onto a common scale where 0 indicates worst performance and 100 indicates best performance. How far a country is from achieving international targets of sustainability determines its placement on this scale.

Note: The EPI scores are not comparable over time, therefore, this dataset only includes the EPI scores from the latest release.

Type of variable: Continuous

4.32.8 Ecosystem Vitality Policy Objective

QoG Code: epi_ev

Ecosystem Vitality Policy Objective measures how well countries are preserving, protecting, and enhancing ecosystems and the services they provide. It comprises 60% of the total EPI score and consists of 7 issue categories: Biodiversity and Habitat (25%), Ecosystem Services (10%), Fisheries (10%), Climate Change (40%), Pollution Emissions (5%), Agriculture (5%), and Water Resources (5%). The policy objective varies from 0 to 100.

[Find more information about this variable in the QoG Data Finder](#)

4.32.9 Fisheries Issue Category

QoG Code: epi_fsh

Fisheries Issue Category consists of 3 indicators:

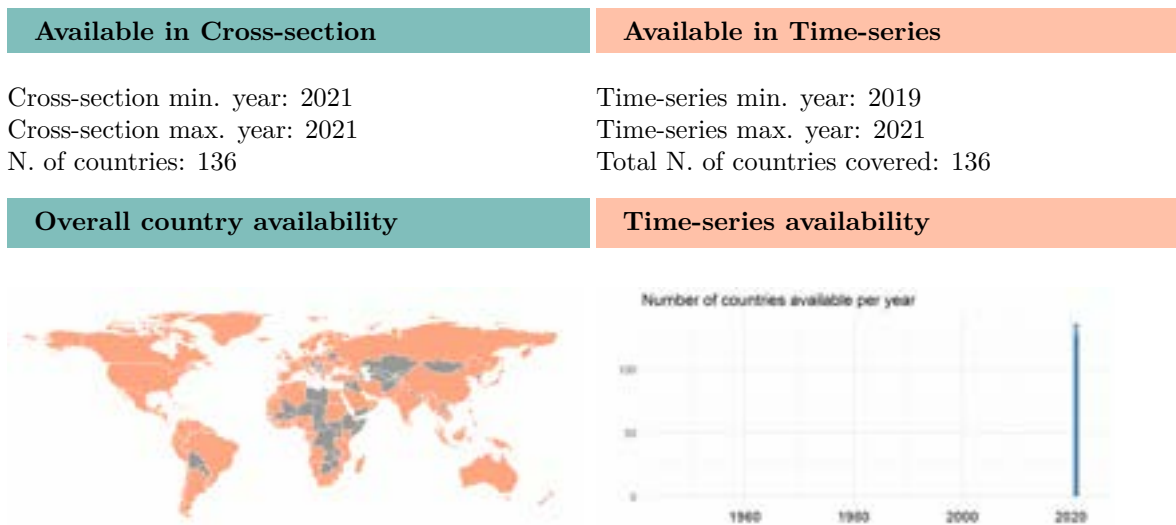

1) Fish stock status, measured as the percentage of a country's total catch that comes from overexploited or collapsed stocks, considering all fish stocks within a country's EEZs. Because continued and increased stock exploitation leads to smaller catches, this indicator sheds light on the impact of a country's fishing practices. The metric is calculated as an average percentage weighted by catch and summed across classes of concern. It is log-transformed, $\ln(x + \alpha)$, $\alpha = 1.13\text{E-}05$, and given 35% weight in the aggregation.

2) Marine Trophic Index (MTI), which measures the health of a country's fishing stock based on expected catch and changes over time. The MTI describes the degree to which a country is depleting species at higher trophic levels and fishing down the food web. It is log-transformed, $\ln(x + \alpha)$, $\alpha = 9.51\text{E-}07$, and given 35% weight in the aggregation.

3) Fish caught by trawling, measured as the percentage of a country's fish caught by bottom or pelagic trawling, where a fishing net is pulled through the water behind a boat. It is log-transformed, $\ln(x + \alpha)$, $\alpha = 8.40\text{E-}08$, and given 30% weight in the aggregation.

The issue category varies from 0 to 100.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.32.10 Sanitation and Drinking Water Issue Category

QoG Code: epi_h2o

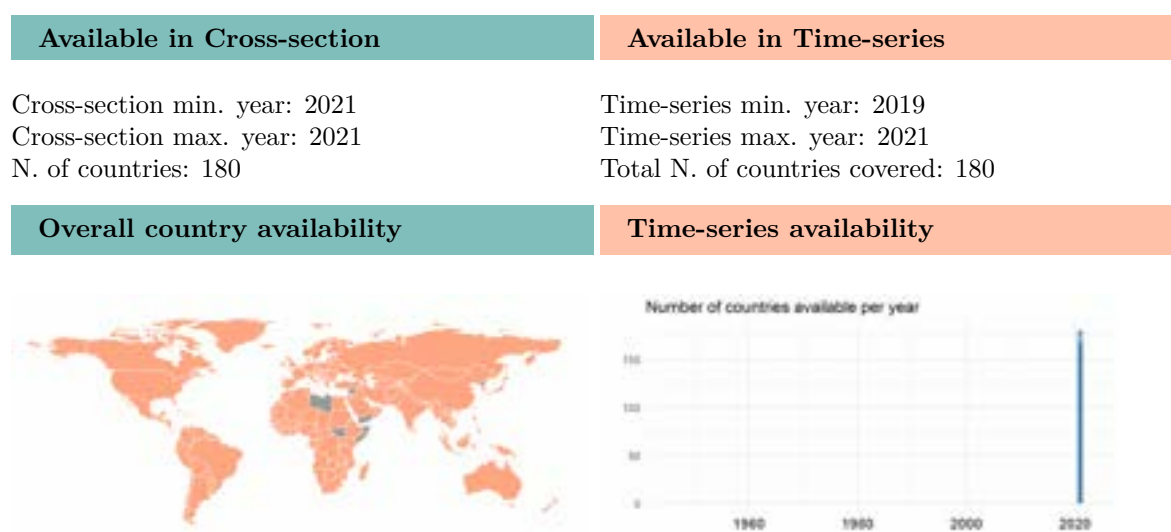

Sanitation and Drinking Water Issue Category consists of two indicators:

1) Unsafe sanitation, measured as the proportion of a country's population exposed to health risks from their access to sanitation, defined by the primary toilet type used by households. It is log-transformed and given 40% weight in the aggregation.

2) Unsafe drinking water, measured as the proportion of a country's population exposed to health risks from their access to drinking water, defined by the primary water source used by households and the household water treatment, or the treatment that happens at the point of water collection. It is log-transformed and given 60% weight in the aggregation.

Both indicators are measured using the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons. The issue category varies from 0 to 100.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.32.11 Heavy Metals Issue Category

QoG Code: epi_hmt

Heavy Metals Issue Category consists of the indicator Lead Exposure, which measures the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons due to this risk. It is log-transformed. The issue category varies from 0 to 100.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.32.12 Waste Management Issue Category

QoG Code: epi_wmg

Waste Management Issue Category consists of the indicator Controlled Solid Waste, which refers to the proportion of household and commercial waste generated in a country that is collected and treated in a manner that controls environmental risks. This metric counts waste as "controlled" if it is treated through recycling, composting, anaerobic digestion, incineration, or disposed of in a sanitary landfill. The issue category varies from 0 to 100.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2021
Cross-section max. year: 2021
N. of countries: 180

Available in Time-series

Time-series min. year: 2019
Time-series max. year: 2021
Total N. of countries covered: 180

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.32.13 Water Resources Issue Category

QoG Code: epi_wrs

Water Resources Issue Category consists of the indicator Wastewater Treatment, which measures the percentage of wastewater that undergoes at least primary treatment, normalized by the proportion of the population connected to a municipal wastewater collection system. It is calculated through a straightforward product of wastewater treatment level and sewerage connection rate. The issue category varies from 0 to 100.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2021 Cross-section max. year: 2021 N. of countries: 177	Time-series min. year: 2019 Time-series max. year: 2021 Total N. of countries covered: 177

4.33 Ethnic and Cultural Diversity by Country

Dataset by: James D. Fearon

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Fearon, J. D. (2003). Ethnic and cultural diversity by country. *Journal of Economic Growth*, 8(2), 195–222

Dataset found at: <https://fearonresearch.stanford.edu/paperspublished/journal-articles-2/>

Last update by original source: 2003-06-30

Date of download: 2022-08-29

Data used in the article Ethnic and Cultural Diversity by Country published in Journal of Economic Growth, containing data on 822 ethnic groups in 160 countries that made up at least 1 percent of the country population in the early 1990s. This data was last originally updated in 2003. For this compilation, QoG Data imputes the values from 2003 into 2021.

4.33.1 Cultural Diversity

QoG Code: fe_cultdiv

This measure modifies fractionalization (fe_etfra) so as to take some account of cultural distances between groups, measured as the structural distance between languages spoken by different groups in a country. If the groups in a country speak structurally unrelated languages, their cultural diversity index will be the same as their level of ethnic fractionalization (fe_etfra). The more similar are the languages spoken by different ethnic groups, however, the more will this measure be reduced below the level of ethnic fractionalization for that country. The values are assumed to be constant for all years.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 153

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2022
Total N. of countries covered: 156

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.33.2 Ethnic Fractionalization

QoG Code: fe_etfra

Restricting attention to groups that had at least 1 percent of country population in the 1990s, Fearon identifies 822 ethnic and "ethnoreligious" groups in 160 countries. This variable reflects the probability that two randomly selected people from a given country will belong to different such groups. The variable thus ranges from 0 (perfectly homogeneous) to 1 (highly fragmented). The values are assumed to be constant for all years.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 154

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2022
Total N. of countries covered: 157

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.33.3 Largest Minority

QoG Code: fe_lmin

Based on the same set of groups, this variable reflects the population share of the second largest group (largest minority). The values are assumed to be constant for all years.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 145	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 147
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.33.4 Plurality Group

QoG Code: fe_plural

Based on the same set of groups, this variable reflects the population share of the largest group (plurality group) in the country. The values are assumed to be constant for all years.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 153	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 156

Overall country availability

4.34 European Social Survey - Wave 1-10

Dataset by: European Social Survey

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

NSD - Norwegian Centre for Research Data. (2020). European social survey cumulative file, ess 1-9 [Date accessed: 17 February 2021]. <https://doi.org/10.21338/NSD-ESS-CUMULATIVE>

Dataset found at: <https://www.europeansocialsurvey.org/>

Date of download: 2023-01-02

The European Social Survey (ESS) is an academically-driven multi-country survey, which has been administered in over 30 countries to date. Its three aims are: first - to monitor and interpret changing public attitudes and values within Europe and to investigate how they interact with Europe's changing institutions; second - to advance and consolidate improved methods of cross-national survey measurement in Europe and beyond; and third - to develop a series of European social indicators, including attitudinal indicators.

This dataset includes two types of variables: 1) percentage of respondents choosing a particular response option, and 2) average response per country, weighted using design weights (dweight), as recommended by the ESS.

4.34.1 Subjective Happiness

QoG Code: `ess_happy`

Taking all things together, how happy would you say you are?

0. Extremely Unhappy

4.36 Expanded Trade and GDP Data

Dataset by: Kristian S. Gleditsch

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Gleditsch, K. S. (2002). Expanded trade and GDP data (version 6.0). *Journal of Conflict Resolution*, 46(5), 712–724

Gleditsch, K., & Ward, M. D. (1999). Interstate system membership: A revised list of the independent states since 1816. *International Interactions*, 25, 393–413

Dataset found at: <http://ksgleditsch.com/exptradegdp.html>

Last update by original source: 2014-09-09

Date of download: 2022-09-26

The dataset by Kristian Gleditsch provides estimates of trade flows between independent states (1948-2000) and GDP per capita of independent states (1950-2011). Version 6. In order to fill in gaps in the Penn World Table's mark 5.6 and 6.2 data (see: Heston, Summers & Aten), Gleditsch has imputed missing data by using an alternative source of data (the CIA World Fact Book), and through extrapolation beyond available time-series.

4.36.1 GDP per Capita (Current Prices)

QoG Code: `gle_cgdpc`

GDP per capita (Current prices).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1950

Time-series max. year: 2011

Total N. of countries covered: 209

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.36.2 Total Export

QoG Code: gle_exp

This amounts to the total export of a country, in millions of current year US dollars, estimated as the sum of all dyadic export figures to that country using the imputation technique described above.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1948

Time-series max. year: 2000

Total N. of countries covered: 204

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.36.3 Real GDP (2005)

QoG Code: gle_gdp

Real GDP (2005). This is Gleditsch's estimate of GDP per Capita in US dollars at current year international prices.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1950
Time-series max. year: 2011

4.37 Extended State History Index

Dataset by: Borcan, Olsson and Putterman

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Borcan, O., Olsson, O., & Putterman, L. (2018). State history and economic development: Evidence from six millennia. *Journal of Economic Growth* 23(1): 1-40. <https://sites.google.com/site/econolaols/extended-state-history-index>

Dataset found at: <https://sites.google.com/site/econolaols/extended-state-history-index>

Last update by original source: 2017-11-09

Date of download: 2022-09-30

This dataset measures the presence and duration of experience with macro polities. It extends and replaces previous versions of the State Antiquity Index (originally created by Bockstette, Chanda and Putterman, 2002). The updated data extends the previous Statehist data into the years before 1 CE to the first states in Mesopotamia (in the fourth millennium BCE), along with filling in the years 1951 - 2000 CE that were left out of past versions of the Statehist data.

The construction of the index follows the principles developed by Bockstette et al. (2002). First, the duration of state existence is established for each territory defined by modern-day country borders. Second, this duration is divided into 50-year periods. For each half-century from the first period (state emergence) onwards, the authors assign scores to reflect three dimensions of state presence, based on the following questions: 1) Is there a government above the tribal level? 2) Is this government foreign or locally based? 3) How much of the territory of the modern country was ruled by this government?

4.37.1 State History Index, with the discounting rates 0%

QoG Code: sai_statehiste0

State History Index, aggregate index of state history in the year 2000, and discounted values of the overall country indicators with the discounting rates of 0%.

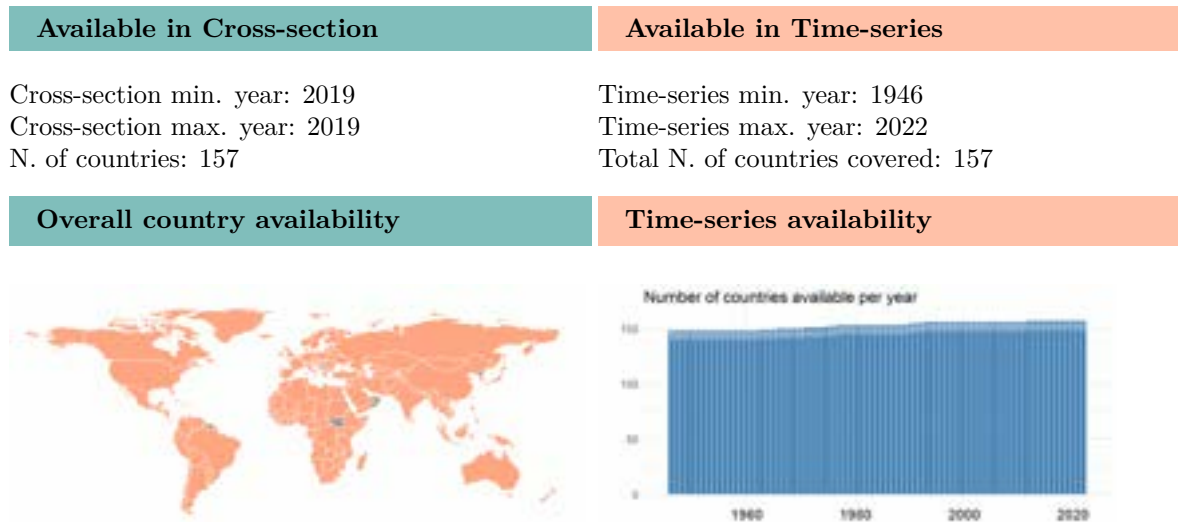

The construction of the index follows the principles developed by Bockstette et al. (2002). First, the duration of state existence (from state emergence to 2000 CE) was established for each territory defined by modern-day country borders. From the state emergence onwards, the authors assigned scores to reflect three dimensions of state presence, based on the following questions:

- 1) Is there a government above the tribal level? (Score component z1 receives 1 point if yes, 0.75 if the government can at best be described as a paramount chiefdom and 0 points if no government is present);
- 2) Is this government foreign or locally based? (z2 is 1 if the rule is locally based, 0.5 if externally based, and 0.75 for local government with substantial foreign oversight);
- 3) How much of the modern country's territory was ruled by this government? (z3 reflects the proportions of the territory under some rule: 1 (over 50 percent), 0.75 (25-50 percent), 0.5 (10-25 percent), 0.3 (under 10 percent).

The discount rates refer to a technique used to account for the different time periods to which a variable may refer to in order to create an aggregate index. More information about the discount

rate used for this dataset can be found at <https://sites.google.com/site/econolaols/extended-state-history-index>

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.37.2 State History Index, with the discounting rates 1%

QoG Code: sai_statehiste01

State History Index, aggregate index of state history in the year 2000, and discounted values of the overall country indicators with the discounting rates of 1%.

The construction of the index follows the principles developed by Bockstette et al. (2002). First, the duration of state existence (from state emergence to 2000 CE) was established for each territory defined by modern-day country borders. From the state emergence onwards, the authors assigned scores to reflect three dimensions of state presence, based on the following questions:

- 1) Is there a government above the tribal level? (Score component z1 receives 1 point if yes, 0.75 if the government can at best be described as a paramount chiefdom and 0 points if no government is present);
- 2) Is this government foreign or locally based? (z2 is 1 if the rule is locally based, 0.5 if externally based, and 0.75 for local government with substantial foreign oversight);
- 3) How much of the modern country's territory was ruled by this government? (z3 reflects the proportions of the territory under some rule: 1 (over 50 percent), 0.75 (25-50 percent), 0.5 (10-25 percent), 0.3 (under 10 percent).

The discount rates refer to a technique used to account for the different time periods to which a variable may refer to in order to create an aggregate index. More information about the discount rate used for this dataset can be found at <https://sites.google.com/site/econolaols/extended-state-history-index>

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 157	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 157

4.38 FAO Land Use Indicators

Dataset by: Food and Agricultural Organization of the United Nations (FAO)

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

FAO. (2022). Faostat land, inputs and sustainability, land use indicators [Available at: <http://www.fao.org/forest-resources-assessment/en/>, Rome, Italy.]

Dataset found at: <http://www.fao.org/faostat/en/#home>

Last update by original source: 2022-07-15

Date of download: 2022-11-15

The FAOSTAT Land Use domain contains data on 47 categories of land use, irrigation and agricultural practices, relevant to monitor agriculture, forestry, and fisheries activities at national, regional and global level. Data are available by country and year, with global coverage and annual updates.

Note: Micronesia has been dropped due to duplicate cases.

4.38.1 Agricultural land (% of Land area)

QoG Code: fao_luagr

Agricultural land as a share of total land area.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019

Cross-section max. year: 2019

N. of countries: 193

Available in Time-series

Time-series min. year: 1961

Time-series max. year: 2020

Total N. of countries covered: 206

Overall country availability

Time-series availability

4.39 Financing the State: Government Tax Revenue from 1800 to 2012

Dataset by: Andersson and Brambor

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Andersson, Per F. and Thomas Brambor. (2019). Financing the state: Government tax revenue from 1800 to 2012. version 2.0. <https://www.perandersson.com/data>

Dataset found at: <https://www.perandersson.com/data.html>

Last update by original source: 2019-12-16

Date of download: 2022-09-28

The 'Financing the State: Government Tax Revenue from 1800 to 2012' dataset provides information on the size and composition of government tax revenues for 31 countries in Europe and the Americas for the period from 1800 (or independence) to 2012.

It provides a comprehensive picture of the sources of government funding starting with the establishment or independence of modern nation states in the early 19th century. The original dataset contains further information on sub-categories of direct and indirect taxes, such as revenues received through property, income, excise, consumption and custom taxes.

4.39.1 Share Direct Taxes

QoG Code: gtr_centaxdir

Share of total central government tax revenue from direct taxes. A direct tax is imposed directly upon an individual person (legal or natural) or property, in contrast to a tax imposed upon a transaction. Direct taxes include taxes on income, property, and other direct taxes.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2011

Total N. of countries covered: 33

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.39.2 Share Direct Taxes in 1800

QoG Code: gtr_centaxdir1800

Share of total central government tax revenue from direct taxes, in the year 1800. A direct tax is imposed directly upon an individual person (legal or natural) or property, in contrast to a tax imposed upon a transaction. Direct taxes include taxes on income, property, and other direct taxes.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1955

Time-series max. year: 2012

Total N. of countries covered: 1

4.40 Fractionalization

Dataset by: Alesina, Devleeschauwer, Easterly, Kurlat and Wacziarg

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Alesina, A., Devleeschauwer, A., Easterly, W., Kurlat, S., & Wacziarg, R. (2003). Fractionalization [O. Galor (ed.) (2011), *Inequality and Economic Development: The Modern Perspective*, Edward Elgar, UK.]. *Journal of Economic Growth*, 8(2), 155–194

Dataset found at: http://www.anderson.ucla.edu/faculty_pages/romain.wacziarg/papersum.html

Last update by original source: 2003-10-10

Date of download: 2022-09-21

This dataset contains variables concerning measures of ethnic, linguistic and religious fractionalization.

The variables reflect the probability that two randomly selected people from a given country will not share a certain characteristic. The higher the number the less probability of the two sharing that characteristic. The data was last updated by the authors in 2003. For the QoG Data, the data from the year 2000 is repeated throughout the other years, then, these variables should be taken as historical variables.

4.40.1 Ethnic Fractionalization in the year 2000

QoG Code: al_ethnic2000

Ethnic Fractionalization in the year 2000. The definition of ethnicity involves a combination of racial and linguistic characteristics. The result is a higher degree of fractionalization than the commonly used ELF-index (see el_elf60) in for example Latin America, where people of many races speak the same language.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 186

Available in Time-series

Time-series min. year: 1946

4.41 Freedom in the World

Dataset by: Freedom House

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Freedom House. (2022a). Freedom in the world 2022. <https://freedomhouse.org/report/freedom-world>

Dataset found at: <https://freedomhouse.org/report/freedom-world>

Last update by original source: 2022-02-01

Date of download: 2022-09-13

Freedom in the World is an annual global report on political rights and civil liberties, composed of numerical ratings and descriptive texts for each country and a select group of territories. The 2022 edition covers developments in 195 countries and 15 territories from January 1, 2021, through December 31, 2021.

The report's methodology is derived in large measure from the Universal Declaration of Human Rights, adopted by the UN General Assembly in 1948. Freedom in the World is based on the premise that these standards apply to all countries and territories, irrespective of geographical location, ethnic or religious composition, or level of economic development. Freedom in the World operates from the assumption that freedom for all people is best achieved in liberal democratic societies.

Freedom in the World assesses the real-world rights and freedoms enjoyed by individuals, rather than governments or government performance per se. Political rights and civil liberties can be affected by both state and non-state actors, including insurgents and other armed groups. To read more about the methodology used by Freedom House, please visit <https://freedomhouse.org/reports/freedom-world/freedom-world-research-methodology>. These subcategories, drawn from the Universal Declaration of Human Rights, represent the fundamental components of freedom, which include an individual's ability to:

- Vote freely in legitimate elections;
- Participate freely in the political process;
- Have representatives that are accountable to them;
- Exercise freedoms of expression and belief;
- Be able to freely assemble and associate;
- Have access to an established and equitable system of rule of law;
- Enjoy personal freedoms, including free movement, the right to hold private property, social freedoms, and equal access to economic opportunities.

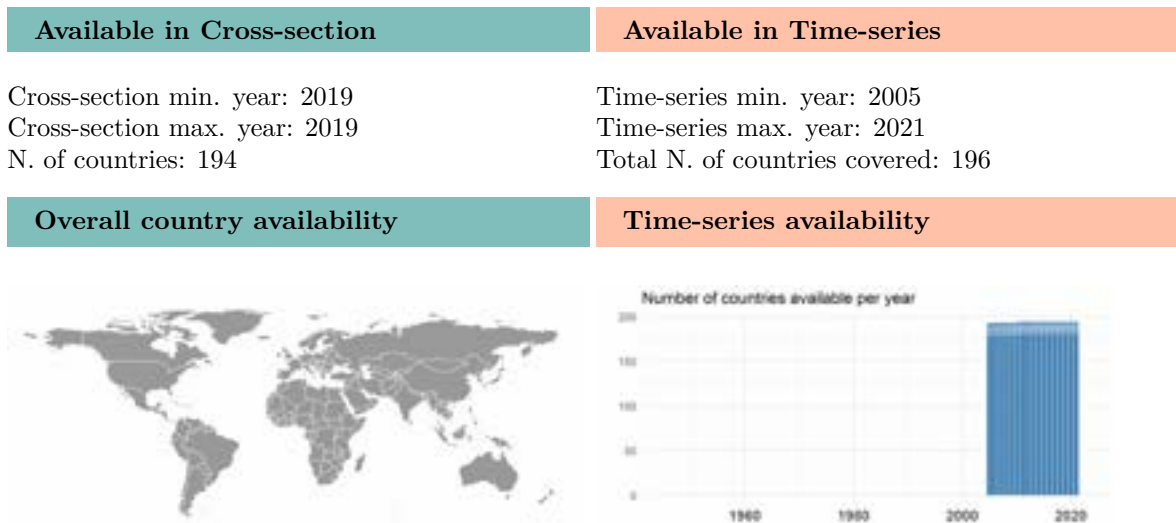

Note: The 1982 edition of Freedom in the World covers the period Jan 1981 - Aug 1982 (=1981 in our dataset). The 1983-84 edition covers the period Aug 1982 - Nov 1983 (=1983 in our dataset). This leaves 1982 empty. For 1972, South Africa was in the original data rated as 'White' (fh_cl: 3, fh_pr: 2, fh_status: Free) and 'Black' (fh_cl: 6, fh_pr: 5, fh_status: Not Free). We treat South Africa 1972 as missing.

4.41.1 Associational and Organizational Rights

QoG Code: fh_aor

Associational and Organizational Rights - The variable evaluates the freedom of assembly, demonstrations and open public discussion; the freedom for nongovernmental organizations; and the freedom for trade unions, peasant organizations and other professional and private organizations. Countries are graded between 0 (worst) and 12 (best).

Type of variable: Discrete

[Find more information about this variable in the QoG Data Finder](#)

4.41.2 Civil Liberties

QoG Code: fh_cl

Civil Liberties Rating - Civil liberties allow for the freedoms of expression and belief, associational and organizational rights, rule of law, and personal autonomy without interference from the state. The more specific list of rights considered vary over the years. Countries are graded between 1 (most free) and 7 (least free).

Type of variable: Discrete

Overall country availability

Time-series availability

4.41.3 Electoral Process

QoG Code: fh_ep

Electoral Process - The variable measures to what extent the national legislative representatives and the national chief authority are elected through free and fair elections. Countries are graded between 0 (worst) and 12 (best).

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 194

Available in Time-series

Time-series min. year: 2005
Time-series max. year: 2021
Total N. of countries covered: 196

Overall country availability

Time-series availability

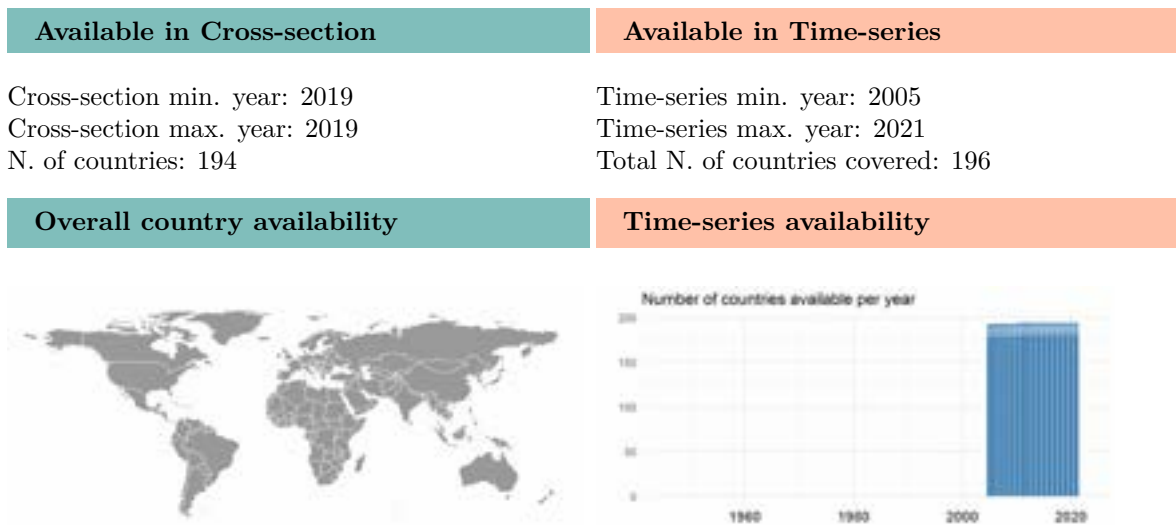

[Find more information about this variable in the QoG Data Finder](#)

4.41.4 Freedom of Expression and Belief

QoG Code: fh_feb

Freedom of Expression and Belief - The variable measures the freedom and independence of the media and other cultural expressions; the freedom of religious groups to practice their faith and express themselves; the academic freedom and freedom from extensive political indoctrination in the educational system; and the ability of the people to engage in private (political) discussions without fear of harassment or arrest by the authorities. Countries are graded between 0 (worst) and 16 (best).

Type of variable: Discrete

[Find more information about this variable in the QoG Data Finder](#)

4.41.5 Functioning of Government

QoG Code: fh_fog

Functioning of Government - The variable examines to what extent the freely elected head of government and a national legislative representative determine the policies of the government; if the government is free from pervasive corruption; and if the government is accountable to the electorate between elections and operates with openness and transparency. Countries are graded between 0 (worst) and 12 (best).

Type of variable: Discrete

4.41.8 Political Rights

QoG Code: fh_pr

Political Rights Rating - Political rights enable people to participate freely in the political process, including the right to vote freely for distinct alternatives in legitimate elections, compete for public office, join political parties and organizations, and elect representatives who have a decisive impact on public policies and are accountable to the electorate. The specific list of rights considered varies over the years. Countries are graded between 1 (most free) and 7 (least free).

Type of variable: Discrete

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 194	Time-series min. year: 1972 Time-series max. year: 2021 Total N. of countries covered: 207
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.41.9 Rule of Law

QoG Code: fh_rol

Rule of Law - The variable measures the independence of the judiciary; the extent to which rule of law prevails in civil and criminal matters; the existence of direct civil control over the police; the protection from political terror, unjustified imprisonment, exile and torture; absence of war and insurgencies; and the extent to which laws, policies and practices guarantee equal treatment of various segments of the population. Countries are graded between 0 (worst) and 16 (best).

Type of variable: Discrete

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 194	Time-series min. year: 2005 Time-series max. year: 2021 Total N. of countries covered: 196

[Find more information about this variable in the QoG Data Finder](#)

4.41.10 Freedom Status

QoG Code: fh_status

1. Free
2. Partly Free
3. Not Free

Until 2003, countries whose combined average ratings for Political Rights and Civil Liberties fell between 1.0 and 2.5 were designated 'Free'; between 3.0 and 5.5 'Partly Free', and between 5.5 and 7.0 'Not Free'. Since then, countries whose ratings average 1.0 to 2.5 are considered 'Free', 3.0 to 5.0 'Partly Free', and 5.5 to 7.0 'Not Free'.

Type of variable: Discrete

Available in Cross-section	Available in Time-series

4.42 Freedom of the Press

Dataset by: Freedom House

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Freedom House. (2017). Freedom of the press 2017. <https://freedomhouse.org/report/freedom-press/freedom-press-2017>

Dataset found at: <https://freedomhouse.org/reports/publication-archives>

Last update by original source: 2017-04-28

Date of download: 2022-09-13

Freedom of the Press, an annual report on media independence around the world, was published between 1980 and 2017, and assessed the degree of print, broadcast, and digital media freedom in 199 countries and territories. It provided numerical scores and country narratives evaluating the legal environment for the media, political pressures that influenced reporting, and economic factors that affected access to news and information.

Note: The number in the variable names indicate what time period they refer to.

4.43 Freedom on the Net

Dataset by: Freedom House

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Freedom House. (2022b). Freedom on the net 2022: Countering an authoritarian overhaul of the internet. <https://freedomhouse.org/report/freedom-net/2022/countering-authoritarian-overhaul-internet>

Dataset found at: <https://freedomhouse.org/report/freedom-net>

Last update by original source: 2022-10-17

Date of download: 2022-11-14

Freedom on the Net is a Freedom House project consisting of cutting-edge analysis, fact-based advocacy, and on-the-ground capacity building. It features a ranked, country-by-country assessment of online freedom, a global overview of the latest developments, as well as in depth country reports. Freedom on the Net measures the subtle and not-so-subtle ways that governments and non-state actors around the world restrict our intrinsic rights online. Each country assessment includes a detailed narrative report and numerical scores, based on methodology developed in consultation with international experts. This methodology includes three categories:

1. Obstacles to Access details infrastructural and economic barriers to access, legal and ownership control over internet service providers, and independence of regulatory bodies;
2. Limits on Content analyzes legal regulations on content, technical filtering and blocking of websites, self-censorship, the vibrancy/diversity of online news media, and the use of digital tools for civic mobilization;
3. Violations of User Rights tackles surveillance, privacy, and repercussions for online speech and activities, such as imprisonment, extralegal harassment, or cyberattacks.

Freedom on the Net is a collaborative effort between a small team of Freedom House staff and an extensive network of local researchers and advisors in 65 countries.

4.43.1 Freedom on the Net: Limits on content

QoG Code: `fhn_fotnloc`

Limits on Content: Analyzes legal regulations on content, technical filtering and blocking of websites, self-censorship, the vibrancy/diversity of online news media, and the use of digital tools for civic mobilization. The score goes from 0 to 100, where 100 represents worst outcomes.

Please note that the values have changed from previous versions of QoG data given that Freedom House now provides a document with the vlaues for all years and these are different for the first years of the score.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2020 N. of countries: 71	Time-series min. year: 2010 Time-series max. year: 2021 Total N. of countries covered: 71

4.44 Global Burden of Disease Study 2019

Dataset by: Institute for Health Metrics and Evaluation

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Global Burden of Disease Collaborative Network. (2020). Global burden of disease study 2019 (gbd 2019) results. <https://vizhub.healthdata.org/gbd-results/>

Dataset found at: <http://www.healthdata.org/gbd>

Date of download: 2022-12-14

IHME provides rigorous and comparable measurements of the world's most important health problems and evaluates the strategies used to address them.

4.44.1 Healthy Life Years, Female, Age 1-4 years

QoG Code: ihme_hle_0104f

Healthy Life Years, Female, Age 1-4 years. HALE is often referred to as healthy life expectancy. Unlike life expectancy, HALE takes into account mortality and nonfatal outcomes. HALE does this by summarizing years lived in less than ideal health (YLDs) and years lost due to premature mortality (YLLs) in a single measure of average population health for individual countries.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 193

Available in Time-series

Time-series min. year: 1990

4.45 Global Competitiveness Report 2019

Dataset by: World Economic Forum

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

World Economic Forum. (2019). The global competitiveness report 2019 [Commercial use of data produced by the World Economic Forum is forbidden]. http://www3.weforum.org/docs/WEF_TheGlobalCompetitivenessReport2019.pdf

Dataset found at: <http://reports.weforum.org/global-competitiveness-report-2019/downloads/>

Date of download: 2021-12-20

The Global Competitiveness Index 4.0 assesses the competitiveness landscape of 140 economies, measuring national competitiveness - defined as the set of institutions, policies and factors that determine the level of productivity. The Report presents information and data that were compiled and/or collected by the World Economic Forum organized into 12 pillars: Institutions, Infrastructure, ICT adoption, Macroeconomic Stability, Health, Skills, Product Market, Labor Market, Financial System, Market Size, Business Dynamism, and Innovation Capabilities.

4.45.1 Active labour market policies

QoG Code: wef_alp

Active labour policies. 1-7 (scale 1 to 7, while 7 is best). In your country, to what extent do Labour market policies help unemployed people to reskill and find new employment (including skills matching, retraining, etc.)? [1 = not at all; 7 = to a great extent] Original sources: World Economic Forum, Executive Opinion Survey

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 140

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.2 Strength of auditing and reporting standards

QoG Code: wef_audit

Strength of auditing and reporting standards. 1-7 (scale 1 to 7, while 7 is best). In your country, how strong are financial auditing and reporting standards? [1 = extremely weak; 7 = extremely strong] Original sources: World Economic Forum, Executive Opinion Survey

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 140

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.3 Burden of government regulation

QoG Code: wef_bgr

Burden of government regulation (scale 1 to 7, while 7 is best). In your country, how burdensome is it for companies to comply with public administration's requirements (e.g., permits, regulations, reporting)? [1 = extremely burdensome; 7 = not burdensome at all] Original sources: World Economic Forum, Executive Opinion Survey

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 140

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.4 Budget transparency

QoG Code: wef_bt

Budget transparency (scale 1 to 100, while 100 is best). This indicator assesses on a scale of 0 to 100 [most transparent] the extent to which governments publish data related to budget and spending. Original sources: The World Bank Group

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 100

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.5 Credit gap

QoG Code: wef_cg

Credit gap in percentage points. It is the difference between the most recent domestic credit to the private sector, as a percentage of GDP, and its 20-year trend.

Original sources: The World Bank Group; World Economic Forum

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 137

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

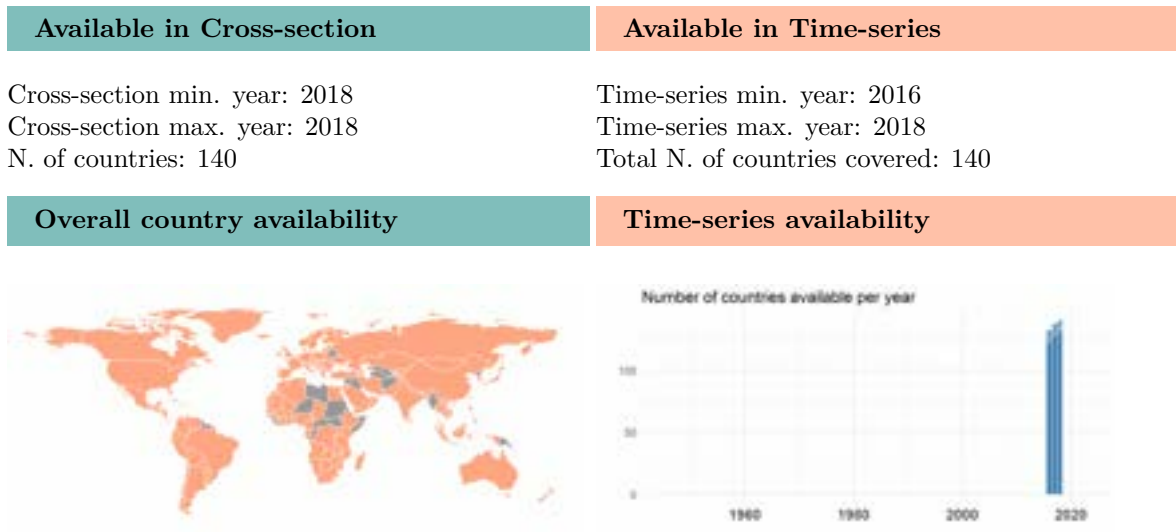

4.45.6 Innovation capability

QoG Code: wef_ci

Innovation capability (scale 1 to 100, while 100 is best).

Original sources: World Economic Forum, Global Competitiveness Report 2018

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.45.7 Incidence of corruption

QoG Code: wef_cor

Incidence of corruption (scale 1 to 100, while 100 is best). The Corruption Perceptions Index aggregates data from a number of different sources that provide perceptions of business people and country experts of the level of corruption in the public sector. The scale ranges from 0 [highly corrupt] to 100 [very clean]. Original sources: Transparency International

Type of variable: Continuous

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.8 Debt dynamics

QoG Code: wef_ddyn

Debt dynamics (scale 1 to 100, while 100 is best). The index measures the change in public debt, weighted by a country's credit rating and debt level in relation to its GDP.

Original sources: World Economic Forum; calculations based on data from International Monetary Fund and rating agencies

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 140

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.9 Digital skills among active population

QoG Code: wef_dsap

Digital skills among active population. 1-7 (scaled 1 to 7, while 7 is the best). In your country, to what extent does the active population possess sufficient digital skills (e.g., computer skills, basic coding, digital reading)? [1 = not all; 7 = to a great extent]

Please note that International Labour Organization (ILO) defines active population as population including employed and unemployed persons.

Original sources: World Economic Forum, Executive Opinion Survey

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 140

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.10 Efficiency of air transport services

QoG Code: wef_eair

Efficiency of air transport services. 1-7 (scaled 1 to 7, while 7 is the best). In your country, how efficient (i.e., frequency, punctuality, speed, price) are air transport services? [1 = extremely inefficient-among the worst in the world; 7 = extremely efficient-among the best in the world] Original sources: World Economic Forum, Executive Opinion Survey

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 140

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.11 Ease of finding skilled employees

QoG Code: wef_efs

Ease of finding skilled employees (scale 1 to 7, while 7 is best). In your country, to what extent can companies find people with the skills required to fill their vacancies? [1 = not at all; 7 = to a great extent] Original sources: World Economic Forum, Executive Opinion Survey

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018

Cross-section max. year: 2018

N. of countries: 140

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.12 Electricity

QoG Code: wef_elec

Electricity (scale 1 to 100, while 100 is best). This indicator is calculated by the World Economic Forum by aggregating two indicators that measure the electrification rate and electric power transmission and distribution losses. For more information, write to gcp@weforum.org.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2018 N. of countries: 140	Time-series min. year: 2016 Time-series max. year: 2018 Total N. of countries covered: 140
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.45.13 Percentage of population with access to electricity

QoG Code: wef_elr

Electricity access entails a household having initial access to sufficient electricity to power a basic bundle of energy services—at a minimum, several lightbulbs, task lighting (such as a flashlight), phone.

Sources: International Energy Agency, World Energy Outlook 2018 (<https://www.iea.org/weo2018/>); The World Bank Group, Sustainable Energy for All database

4.46 Global Corruption Barometer

Dataset by: Transparency International

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

International, T. (2017). Global corruption barometer 9th edition. <https://www.transparency.org/research/gcb>

Dataset found at: <http://www.transparency.org/research/gcb/overview>

Last update by original source: 2021-02-22

Date of download: 2023-01-02

The Global Corruption Barometer is the only world wide public opinion survey about the views and experiences of corruption.

The Global Corruption Barometer asks for people's views on corruption in their country generally, how the level of corruption has changed and in which institutions the problem of corruption is most severe. It also provides a measure of people's experience of bribery in the past year across six different services. The survey asks people how well or badly they think their government has done at stopping corruption.

For the 2015-2017 version all the values have been assigned the year 2016.

Note: Only valid answers are used when calculating the averages, "Unknown", "Don't know" etc. are excluded.

For the 2003-2013 version, the data for a country is marked as missing if there are less than 100 respondents per year, if there are 100 or more, the value corresponds to the mean of all answers.

4.46.1 Paid Bribe: Education System

QoG Code: `gcb__bed`

In the past 12 months have you or anyone living in your household paid a bribe in any form to each of the following institutions/organizations? Education system. Share of population answering Yes.

4.46.21 Corruption Perception-Local Gov Council: Most (% respondents)

QoG Code: gcb_pclgcmost

Percentage of respondents who answered 'Most or All' to the following question about Local government councilors: How many of the following people do you think are involved in corruption, or haven't you heard enough about them to say?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 113

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.46.22 Corruption Perception-Local Gov Council: Some (% respondents)

QoG Code: gcb_pclgcsome

Percentage of respondents who answered 'Some or None' to the following question about Local government councilors: How many of the following people do you think are involved in corruption, or haven't you heard enough about them to say?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 113

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.46.23 Corruption Perception-Legislature: Most (% respondents)

QoG Code: gcb_pclmost

Percentage of respondents who answered 'Most or All' to the following question about the Members of Parliament or Senators: How many of the following people do you think are involved in corruption, or haven't you heard enough about them to say?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 114

Overall country availability

4.46.24 Corruption Perception-Legislature: Some (% respondents)

QoG Code: gcb_pclsome

Percentage of respondents who answered 'Some or None' to the following question about the Members of Parliament or Senators: How many of the following people do you think are involved in corruption, or haven't you heard enough about them to say?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 114

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.46.25 Corruption Perception Change: Decrease (% respondents)

QoG Code: gcb_pcord

Percentage of respondents who answered 'decreased' to the following question: In your opinion, over the past year, has the level of corruption in this country increased, decreased, or stayed the same?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 82

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.46.26 Corruption Perception Change: Increase (% respondents)

QoG Code: gcb_pcori

Percentage of respondents who answered 'increased' to the following question: In your opinion, over the past year, has the level of corruption in this country increased, decreased, or stayed the same?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 82

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.46.27 Corruption Perception-Head of State: Most (% respondents)

QoG Code: gcb_pcpmost

Percentage of respondents who answered 'Most or All' to the following question about the President or Prime Minister and Officials in his office: How many of the following people do you think are involved in corruption, or haven't you heard enough about them to say?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

Cross-section max. year: 2016

N. of countries: 113

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.46.28 Corruption Perception-Police: Most (% respondents)

QoG Code: gcb_pcpolmost

Percentage of respondents who answered 'Most or All' to the following question about the Police: How many of the following people do you think are involved in corruption, or haven't you heard enough about them to say?

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

4.47 Global Data Governance Mapping

Dataset by: Global Data Governance Mapping

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Struett, T., Zable, A., & Ariel, S. (2022). Global data governance mapping: Year two report. <https://globaldatagovernancemapping.org/images/DataGov-Year-2/year-two-mapping-report--07-11-22-.pdf>

Dataset found at: <https://globaldatagovernancemapping.org/>

Last update by original source: 2022-07-11

Date of download: 2022-09-19

The Digital Trade and Data Governance Hub seeks to help policymakers and the public understand how governments around the world govern data.

Data governance, like the data-driven economy, is constantly evolving, reflecting changes in technology, society, and policymakers will and expertise. Consequently, data governance is a work in progress and a different experience for all nations. Nations adopting a comprehensive approach develop strategies, policies, and processes, adapt organizational structures and work to accommodate different types and contexts for data use and re-use. Governments that can accommodate such change in a responsive, competent, and anticipatory manner are likely to build and maintain trust in their institutions.

This dataset divides data governance into six primary attributes: strategic, regulatory, responsible, structural, participatory and international. These attributes can be thought of as the different dimensions of action a nation takes as it works to govern data in a comprehensive manner.

4.47.1 Data Governance International Indicator

QoG Code: `gdg_int`

The international indicator of the Global Data Governance dataset measures whether the government joins with other nations in shared international efforts to establish data governance rules and norms.

This variable is compiled from the following indicators: Convention 108+, Open Government Partnership OECD, AI Principles, Binding Trade Agreements on Cross-Border Data Flows, and Budapest Convention.

It is measured on a scale of 0-100.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2021

Cross-section max. year: 2021

N. of countries: 68

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.47.2 Data Governance Participatory Indicator

QoG Code: gdg_part

The participatory indicator of the Global Data Governance dataset measures whether the government informs its constituents about its activities and asks for public comment, with the intention of incorporating their feedback.

This variable is compiled from the following indicators: Public Consultation on Data, Government Response to Consultation, and Multistakeholder Advisory Body

It is measured on a scale of 0-100.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2021
Cross-section max. year: 2021
N. of countries: 68

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.47.3 Data Governance Regulatory Indicator

QoG Code: gdg_regul

The regulatory indicator of the Global Data Governance dataset measures whether the government constructs a legal regime around data types and/ or uses.

This variable is compiled from the following indicators: Personal Data Protection Law, Open Data Law for the proactive release of government information, Freedom of Information Act, Right to be protected from Automated Decision-Making, and Right of Data Portability

It is measured on a scale of 0-100.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2021

Cross-section max. year: 2021

N. of countries: 68

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.47.4 Data Governance Responsible Indicator

QoG Code: gdg_resp

The responsible indicator of the Global Data Governance dataset measures whether the government thinks about the ethical, trust, and human rights implications of data use and reuse.

This variable is compiled from the following indicators: Data Charter, Public Sector Data Ethics Framework, Responsible AI Initiatives, Trust Framework for Digital Identity, and Management Guidelines for non-governmental data sharing

It is measured on a scale of 0-100.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2021

Cross-section max. year: 2021

N. of countries: 68

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.47.5 Data Governance Strategic Indicator

QoG Code: `gdg_strat`

The strategic indicator of the Global Data Governance dataset concerns the following: the government has a vision or plan for different types of data in the economy and polity.

This variable is compiled from the following indicators: National Data Strategy, Public Administration Strategy, AI Strategy, and Strategy for Data in Emerging Digital Ecosystems. It is measured on a scale of 0-100.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2021

Cross-section max. year: 2021

N. of countries: 68

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.47.6 Data Governance Structural Indicator

QoG Code: gdg_struc

The structural indicator of the Global Data Governance dataset measures whether the government alters institutional structures in response to data-driven transformation.

This variable is compiled from the following indicators: Personal Data Protection Body, Open Data Portal, Open Data Coordinating Body, and Public Sector Data Governance Body.

It is measured on a scale of 0-100.

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2021

Cross-section max. year: 2021

N. of countries: 68

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.47.7 Total Data Governance Score

QoG Code: gdg_total

This variable scores countries based on the six attributes of data governance (strategic, regulatory, responsible, structural, participatory and international). It is measured on a scale from 0-100

Type of variable: Discrete

Available in Cross-section

Cross-section min. year: 2021

Cross-section max. year: 2021

N. of countries: 68

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.48 Global Educational Attainment 1970-2015

Dataset by: Institute for Health Metrics and Evaluation

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Institute for Health Metrics and Evaluation (IHME). (2015). Global educational attainment 1970-2015

Dataset found at: <http://ghdx.healthdata.org/record/global-educational-attainment-1970-2015>

Last update by original source: 2015-04-29

Date of download: 2022-12-07

These are IHME results data from a global analysis of educational attainment spanning the last 50 years. These data are an update to earlier estimates (Educational Attainment and Child Mortality Estimates by Country 1970-2009) and inform the IHME policy report "A Hand Up: Global Progress Towards Universal Education", as well as the Social Determinants of Health Visualization, which is supported by the Center for Health Trends and Forecasts at IHME.

This data file provides estimates of average years of educational attainment per capita for people over the age of 15 for the years 1970-2015 by year, sex, and age group for 188 countries, 21 GBD regions, 7 GBD super regions, and the global aggregate. Age-standardized and population-weighted estimates are included for females 15-44 and for both sexes for the age group 25+.

4.48.1 Educational Attainment (15-24 years, Female)

QoG Code: `gea_ea1524f`

Educational Attainment (15-24 years, Female). Average years of education.

4.49 Global Footprint data

Dataset by: Global Footprint Network

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Global Footprint Network. (2019). National footprint and biocapacity accounts (1961-2016), 2019 edition [Date accessed: 21 October 2020]. <https://data.footprintnetwork.org>

Dataset found at: <https://www.footprintnetwork.org/resources/data/>

Last update by original source: 2022-03-23

Date of download: 2022-11-11

The National Footprint and Biocapacity Accounts (NFAs) measure the ecological resource use and resource capacity of nations over time. Based on approximately 15,000 data points per country per year, the Accounts calculate the Footprints of more than 200 countries, territories, and regions from 1961 to the present, providing the core data needed for all Ecological Footprint analysis worldwide.

4.49.1 Built-up land footprint of consumption (gha per person)

QoG Code: ef_bul

The built-up land footprint is calculated based on the area of land covered by human infrastructure: transportation, housing, and industrial structures. Built-up land may occupy what would previously have been cropland. Measured in global hectares (gha) per person.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018
Cross-section max. year: 2018
N. of countries: 161

Available in Time-series

Time-series min. year: 1961
Time-series max. year: 2018
Total N. of countries covered: 170

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.49.2 Carbon footprint of consumption (gha per person)

QoG Code: ef_carb

The carbon footprint measures CO₂ emissions associated with fossil fuel use (burning fossil fuels and the embodied carbon in imported goods). The carbon footprint component is represented by the area of biologically productive land necessary for absorbing these carbon emissions. Currently, the carbon footprint is the largest portion of humanity's footprint. It is expressed in global hectares (gha) per person.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2018 N. of countries: 161	Time-series min. year: 1961 Time-series max. year: 2018 Total N. of countries covered: 170
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.49.3 Cropland footprint of consumption (gha per person)

QoG Code: ef_crop

Cropland is the most bioproductive of all the land-use types and consists of areas used to produce food and fibre for human consumption, feed for livestock, oil crops, and rubber. The cropland footprint includes crop products allocated to livestock and aquaculture feed mixes, and those used for fibres and materials. Due to lack of globally consistent data sets, current cropland footprint calculations do not yet take into account the extent to which farming techniques or unsustainable agricultural practices may cause long-term degradation of soil.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2018 N. of countries: 161	Time-series min. year: 1961 Time-series max. year: 2018 Total N. of countries covered: 170
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.49.4 Ecological footprint of consumption per person (gha per person)

QoG Code: ef_ef

Total ecological footprint of consumption divided by the population size. Measured in global hectares (gha) per person.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2017 Cross-section max. year: 2018 N. of countries: 179	Time-series min. year: 1961 Time-series max. year: 2018 Total N. of countries covered: 192
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.49.5 Fish footprint of consumption (gha per person)

QoG Code: ef_fg

The fishing grounds footprint is calculated based on estimates of the maximum sustainable catch for a variety of fish species. These sustainable catch estimates are converted into an equivalent mass of primary production based on the various species' trophic levels. This estimate of maximum harvestable primary production is then divided amongst the continental shelf areas of the world. Fish caught and used in aquaculture feed mixes are included. Measured in global hectares (gha) per person.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2018 N. of countries: 161	Time-series min. year: 1961 Time-series max. year: 2018 Total N. of countries covered: 170
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.49.6 Forest product footprint of consumption (gha per person)

QoG Code: ef_for

The forest product footprint is calculated based on the amount of lumber, pulp, timber products, and fuel wood consumed by a population on a yearly basis. Measured in global hectares (gha) per person.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2018 N. of countries: 161	Time-series min. year: 1961 Time-series max. year: 2018 Total N. of countries covered: 170
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.49.7 Grazing footprint of consumption (gha per person)

QoG Code: ef_gl

Grazing land is used to raise livestock for meat, dairy, hide, and wool products. The grazing land footprint is calculated by comparing the amount of livestock feed available in a country with the amount of feed required for all livestock in that year, with the remainder of feed demand assumed to come from grazing land. Measured in global hectares (gha) per person.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2018 N. of countries: 161	Time-series min. year: 1961 Time-series max. year: 2018 Total N. of countries covered: 170

4.50.2 Prevalence of anaemia in pregnant women (aged 15-49)(%)

QoG Code: who_anpreg

Percentage of women aged 15–49 years with a haemoglobin concentration less than 120 g/L for non-pregnant women and lactating women, and less than 110 g/L for pregnant women, adjusted for altitude and smoking.

Data on the prevalence of anaemia and/or mean haemoglobin in women of reproductive age, collected between 1995 and 2019 were obtained from 408 population-representative data sources from 124 countries worldwide. A Bayesian hierarchical mixture model was used to estimate haemoglobin distributions and systematically address missing data, non-linear time trends, and representativeness of data sources. Full details on data sources are available on the GHO Anaemia page.

Full details on statistical methods may be found in the publication: Finucane MM, Paciorek CJ, Stevens GA EM. Semiparametric Bayesian density estimation with disparate data sources: a meta-analysis of global childhood undernutrition. *J Am Stat Assoc.* 2015;110(511):889901.

4.51 Global Militarization Index

Dataset by: Bonn International Center for Conversion

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Bayer, Markus and Paul Rohleder. (2022). *Global Militarization Index 2022*. Bonn International Center for Conversion BICC. <https://gmi.bicc.de/>

Dataset found at: <http://gmi.bicc.de/>

Last update by original source: 2022-11-01

Date of download: 2023-01-03

Compiled by BICC, the Global Militarization Index (GMI) presents on an annual basis the relative weight and importance of a country's military apparatus in relation to its society as a whole. The GMI covers 153 countries and is based on the latest available figures (up to 2021). The index project is financially supported by Germany's Federal Ministry for Economic Cooperation and Development.

Previously, the GMI reached back to the 1990s. Due to data reliability reasons, BICC decided to take the older data offline.

4.51.1 Global Militarization Index

QoG Code: `bicc_gmi`

The Global Militarization Index is divided into three overarching categories: expenditure, personnel and heavy weapons. (See variables `bicc_milexp`, `bicc_milper`, and `bicc_hw`).

In order to increase the compatibility between different indicators and preventing extreme values from crating distortions when normalizing data, in a first step every indicator was represented in a logarithm with the factor 10. Second, all data was normalized using the formula $x=(y-\min)/(\max-\min)$, with min and max representing, respectively, the lowest and the highest value of the logarithm. In a third step, every indicator was weighted in accordance to a subjective factor, reflecting the relative importance attributed to it by BICC researchers. In order to calculate the final score, the weighted indicators were added together and then normalized one last time on a scale ranging from 0 to 1,000. For better comparison of individual years, all years were finally normalized.

Weighting Factors used:

Military expenditures as percentage of GDP - 5

Military expenditures in relation to health spending - 3

Military and paramilitary personnel in relation to population - 4

Military reserves in relation to population - 2

Military and paramilitary personnel in relation to physicians - 2

Heavy weapons in relation to population - 4

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2021 N. of countries: 158	Time-series min. year: 1990 Time-series max. year: 2021 Total N. of countries covered: 167
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.51.2 Heavy Weapons Index

QoG Code: `bicc_hw`

The GMI takes into consideration the number of an armed forces' heavy weapons in relation to the total population. Heavy weapons are defined here as any piece of military equipment which fits into either one of four categories: armored vehicles (armored personnel carriers, light tanks, main battle tanks), artillery (multiple rocket launchers, self-propelled artillery, towed artillery) above 100mm caliber, combat aircraft (attack helicopters, fixed-wing fighter aircraft), and major fighting ships (submarines, major surface combatants above corvette size).

Data on weapons holdings was collected by BICC from different sources, mainly the Military Balance from ISS. Data on small arms and light weapons (SALW) is not only extremely difficult to obtain but also unreliable and was thus not included in the GMI.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2021 N. of countries: 158	Time-series min. year: 1990 Time-series max. year: 2021 Total N. of countries covered: 167

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.51.3 Military Expenditure Index

QoG Code: `bicc_milexp`

Military spending in relation to GDP and health spending are the most important indicators for determining the level of militarization. Financial resources which are made available via the military budget by a government are an important factor which affects capacities and size of a state's armed forces. The other indicator the GMI uses is the comparison between the total military budget and government spending on health services.

Figures for military expenditure are compiled from the data base of the Stockholm Peace Research Institute SIPRI. Even though SIPRI may currently be regarded as the most reliable source, data on military expenditure has to be treated with extreme caution. For many countries, especially in the developing world and autocratic states, the figures are but rough estimates. In cases where SIPRI does not provide any up-to-date information, we adopted the latest available figures provided they were no older than three years.

Data on gross domestic product was taken from the International Monetary Fund. Data on health expenditure used have been extracted from the data base of the World Health Organization.

4.51.4 Military Personnel Index

QoG Code: `bicc_milper`

The level of militarization is also represented by the relation of military personnel to the total population and physicians. The first and most important indicator in this category is the active (para)military personnel to the total population. Paramilitary personnel were included here, since in many countries the regular military alone does not adequately reflect the total size of the armed forces.

The main criterion for coding an organizational entity as either military or paramilitary is that the forces in question are under the direct control of the government in addition to being armed, uniformed and garrisoned.

For a comprehensive presentation of the available personnel and an adequate representation of the relative level of militarization, a second indicator in this category takes into account the percentage of reserve forces in the total population. This factor is relevant for some countries, such as Switzerland that have a comparably small standing army but a more substantial amount of available reserves within society. The third indicator compares the total amount of military and paramilitary forces with the number of physicians in a country in order to express the relation between military and non-military expertise in a society.

All data on military personnel was compiled from the Military Balance, the yearbook published by the Institute for Strategic and International Studies (IISS). Population size figures were taken from the Vital Statistics Report of the United Nations; data on the number of physicians from the World Health Organization.

4.52 Global Peace Index

Dataset by: Institute for Economics & Peace

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Institute for Economics and Peace. (2022b). Global peace index 2022: Measuring peace in a complex world [Accessed 01-09-2022]. <http://visionofhumanity.org/resources>

Dataset found at: <http://visionofhumanity.org/indexes/global-peace-index/>

Last update by original source: 2022-06-10

Date of download: 2022-09-01

The Global Peace Index (GPI), which ranks 163 independent states and territories according to their level of peacefulness. Produced by the Institute for Economics and Peace (IEP), the GPI is the world's leading measure of global peacefulness. The complete version of the GPI covers 99.7 per cent of the world's population, using 23 qualitative and quantitative indicators from highly respected sources, and measures the state of peace using three thematic domains: the level of Societal Safety and Security; the extent of Ongoing Domestic and International Conflict; and the degree of Militarisation.

Please refer to the original source to see all of the indicators. For the QoG compilation data, we assume the report refers to the data of the preceding year.

4.52.1 Ongoing Conflict

QoG Code: `gpi_conf`

Ongoing Domestic and International Conflict (scaled 1 to 5, 5 refers to higher intensity of conflict) is one of the three subdomains of the GPI. It investigates the extent to which countries are involved in internal and external conflicts, as well as their role and duration of involvement in conflicts.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019

[Find more information about this variable in the QoG Data Finder](#)

4.52.2 Global Peace Index

QoG Code: `gpi_gpi`

The GPI (scaled from 1 to 5, 5 being least peaceful) measures a country's level of Negative Peace using three domains of peacefulness. The first domain, Ongoing Domestic and International Conflict, investigates the extent to which countries are involved in internal and external conflicts, as well as their role and duration of involvement in conflicts.

The second domain evaluates the level of harmony or discord within a nation; ten indicators broadly assess what might be described as Societal Safety and Security. The assertion is that low crime rates, minimal terrorist activity and violent demonstrations, harmonious relations with neighbouring countries, a stable political scene and a small proportion of the population being internally displaced or made refugees can be equated with peacefulness.

Seven further indicators are related to a country's Militarisation-reflecting the link between a country's level of military build-up and access to weapons and its level of peacefulness, both domestically and internationally. Comparable data on military expenditure as a percentage of GDP and the number of armed service officers per head are gauged, as are financial contributions to UN peacekeeping missions.

4.52.3 Militarisation

QoG Code: `gpi_mil`

Militarisation (scaled 1 to 5, 5 being more militarised) is one of the three subdomains of the GPI. It reflects the link between a country's level of military build-up and access to weapons and its level of peacefulness, both domestically and internationally.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019

4.53 Global Tax Expenditure Database

Dataset by: Redonda, von Haldenwang and Aliu

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Redonda, A., von Haldenwang, C., & Aliu, F. (2022). Global tax expenditures database [dataset], version 1.1.3. <https://doi.org/10.5281/zenodo.6334212>

Dataset found at: <https://gted.net/>

Last update by original source: 2022-05-06

Date of download: 2022-10-06

The Global Tax Expenditures Database (GTED) is led by the Council on Economic Policies (CEP) and the German Development Institute (DIE). It is the result of a multi-year engagement to increase transparency on tax expenditures and the critical role they play in tax systems around the globe.

It brings together the official and publicly available data on tax expenditures, as published by national governments since 1990. The GTED seeks to contribute to improving transparency, deepening analysis and fostering policy debates on the costs and benefits of tax expenditures and related reforms.

4.53.1 Revenue Forgone (% of GDP)

QoG Code: `gted_rfgdp`

Total revenue forgone by country per year as a percentage of the gross domestic product. Revenue forgone shows the amount of revenue a country forgoes or loses by granting tax deductions, exemptions, etc.

The data has been aggregated for QoG Data to the year level. The percentage of revenue forgone of GDP is the sum of all types of tax expenditures in a given year, by country. In the original dataset, the data is presented by provision ID, which means that for each type of tax expenditure there is a separate revenue forgone value.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2019

4.54 Global Terrorism Index

Dataset by: Institute for Economics & Peace

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Institute for Economics and Peace. (2022a). Global terrorism index 2022: Measuring the impact of terrorism [Accessed 01-09-2022]. <http://visionofhumanity.org/resources>

Dataset found at: <https://www.visionofhumanity.org/maps/global-terrorism-index/#/>

Last update by original source: 2022-03-01

Date of download: 2022-09-01

The Global Terrorism Index (GTI) is a comprehensive study analysing the impact of terrorism for 163 countries covering 99.7 percent of the worlds population.

The GTI report is produced by the Institute for Economics & Peace (IEP) using data from Terrorism Tracker and other sources. The GTI produces a composite score so as to provide an ordinal ranking of countries on the impact of terrorism. The GTI scores each country on a scale from 0 to 10; where 0 represents no impact from terrorism and 10 represents the highest measurable impact of terrorism.

Given the significant resources committed to counter terrorism by governments across the world, it is important to analyse and aggregate the available data to better understand its various properties. One of the key aims of the GTI is to examine these trends. It also aims to help inform a positive, practical debate about the future of terrorism and the required policy responses.

4.54.1 Global Terrorism Index

QoG Code: voh_gti

The global terrorism index is a composite measure made up of four indicators: incidents, fatalities, injuries and property damage. To measure the impact of terrorism, a five year weighted average is applied.

Type of variable: Continuous

Date of download: 2022-11-28

Each year, researchers at the Growth Lab of the Center for International Development release growth forecasts for the upcoming decade as well as rankings of countries by their current economic complexity. The Economic Complexity Index (ECI) is a measure of the amount of capabilities and know-how of a given country determined by the diversity, ubiquity, and complexity of the products it exports.

Growth projections are calculated through a process largely based on determining whether a country's economic complexity is higher or lower than expected given its level of income. They expect countries whose economic complexity is greater than they would expect for its level of income to grow faster than those that are "too rich" for their current level of complexity. In this data, a country's growth projection value for a given year is for the decade beginning with that year. For example, a value in a 2017 row is the projection of annualized growth for 2017-2027.

4.55.1 Economic Complexity Index (SITC product classification)

QoG Code: `gpcr_eci`

The Economic Complexity Index (ECI) is a measure of the amount of capabilities and know-how of a given country determined by the diversity, ubiquity, and complexity of the products it exports.

A rank of countries based on how diversified and complex their export basket is. Countries that are home to a great diversity of productive know-how, particularly complex specialized know-how, are able to produce a great diversity of sophisticated products.

The complexity of a country's exports is found to highly predict current income levels, or where complexity exceeds expectations for a country's income level, the country is predicted to experience more rapid growth in the future. ECI therefore provides a useful measure of economic development.

This Economic Complexity Index is computed using SITC product classification.

4.55.2 Forecasted annualized rate of growth for following decade

QoG Code: `gpcr_growth`

A prediction of how much a country will grow based on its current level of Economic Complexity, its Complexity Outlook or connectedness to new complex products in the Product Space, as compared to its current income level in GDP per capita and expected natural resource exports.

Economic complexity alone helps explain the lions share of variance in current income levels. But the value of economic complexity is in its predictive power on future growth, where a simple measure of current complexity and connectedness to new complex products, in relation to current income levels and expected natural resource exports, holds greater accuracy in predicting future growth than any other single economic indicator.

To calculate Economic Complexity Growth Projections, the authors consider four factors as explanatory variables: the Economic Complexity Index; the Complexity Outlook Index; the current level of income; and the expected growth in the value of natural resource exports per capita.

In effect, the growth projections show countries grow by expanding the know-how they have that allows them to produce more, and more complex products, depending on the connectedness of know-how and how many other products rely on similar capabilities, as well as the initial economic complexity the country held.

Growth projections are calculated through a process largely based on determining whether a country's economic complexity is higher or lower than expected given its level of income. The authors expect countries whose economic complexity is greater than the authors would expect for its level of income to grow faster than those that are "too rich" for their current level of complexity.

In this data, a country's growth projection value for a given year is for the decade beginning with that year. For example, a value in a 2017 row is the projection of annualized growth for 2017-2027.

4.56 HRV Transparency Project

Dataset by: Hollyer, Rosendorff and Vreeland

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Hollyer, J. R., Rosendorff, B. P., & Vreeland, J. R. (2014). Measuring transparency. *Political Analysis*, 22(4), 413–434. <https://doi.org/10.1093/pan/mpu001>

Dataset found at: <http://hrvtransparency.org/>

Last update by original source: 2013-12-31

Date of download: 2022-09-05

The HRV Transparency project examines the causes and consequences of government transparency both through theoretical and empirical approaches with the measure of government transparency or HRV Index. The HRV index contrasts with other measurements because it relies on a precise and narrow conception of transparency: the disclosure of policy-relevant information by the government to the public.

The HRV Index focuses on the availability of credible aggregate economic data. It does so by examining patterns of missing data and treating transparency as the latent term which best reflects the tendency to disclose. This measure provides observations for 125 countries from 1980-2010 and can be used to measure relationships between transparency and other issues such as democracy, accountability, or political instability. Transparency encompasses many dimensions. The HRV index measures a specific aspect of government transparency: reporting national data to international organizations. Rather than rely on expert but subjective judgments, the measure is based on objective criteria. The HRV team uses "Item Response Theory", a highly sophisticated and computationally intense method to estimate transparency. This method assigns different weights for reporting distinct measures of the economy, based on how many other countries actually reported data on the measure, and how much a country distinguishes itself from other countries by reporting data on a given measure. (Technically, the model estimates "difficulty" and "discrimination" parameters for each economic variable.)

The model analyzes 240 measures of the economy consistently collected by the World Bank's World Development Indicators. Since the World Bank obtains its data from other international agencies that, in turn, obtain their data from national statistical offices, the HRV measure is a valid indicator of governments' efforts to collect and disseminate economically relevant information. Moreover, because the World Bank omits data considered "questionable", this index reflects the collection and dissemination of generally credible information about a country's national economy.

4.56.1 HRV Index

QoG Code: `hrv_index`

The point estimate of the HRV index. The HRV transparency index measures the availability of credible aggregate economic data that a country discloses to the public.

Type of variable: Continuous

4.59 Historical Index of Ethnic Fractionalization

Dataset by: Lenka Draanová

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Drazanova, L. (2019). Historical index of ethnic fractionalization dataset (hief) [UNF:6:z4J/b/PKbUpNdIoeEFPvaw[fileUNF]]. <https://doi.org/https://doi.org/10.7910/DVN/4JQRCL>

Dataset found at: <https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/4JQRCL>

Last update by original source: 2019-07-24

Date of download: 2022-10-03

The Historical Index of Ethnic Fractionalization (HIEF) dataset contains an ethnic fractionalization index for 165 countries across all continents. The dataset covers annually the period 1945-2013. The ethnic fractionalization index corresponds to the probability that two randomly drawn individuals within a country are not from the same ethnic group. The new dataset is a natural extension of previous ethnic fractionalization indices and it allows its users to compare developments in ethnic fractionalization over time. The applications of HIEF pertain to the pattern of ethnic diversity across countries and over time.

4.59.1 Historical Index of Ethnic Fractionalization

QoG Code: hief_efindex

Based on the annual percentage of ethnic groups in each country The Historical Index of Ethnic Fractionalization (hereafter, HIEF) calculates the degree of ethnic fractionalization (EF) using the most universally applied formula in the empirical literature, which is a decreasing transformation of the Herfindahl concentration index.

Where EF_c is the level of ethnic fractionalization in country c , i indexes ethnic groups and S_i is the proportion of the population in unit c belonging to ethnic group i ($i = 1, \dots, n$).

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2013

United Nations Development Program. (2022b). Human development report 2021/2022. <https://hdr.undp.org/content/human-development-report-2021-22>

Dataset found at: <https://hdr.undp.org/content/human-development-report-2021-22>

Last update by original source: 2022-09-16

Date of download: 2022-11-16

The Human Development Report (HDR) is an annual report published by the Human Development Report Office of the United Nations Development Programme (UNDP).

The entire series of Human Development Index (HDI) values and rankings are recalculated every year using the most recent (revised) data and functional forms. The HDI rankings and values in the 2014 Human Development Report cannot therefore be compared directly to indices published in previous Reports. Please see hdr.undp.org for more information.

The HDI was created to emphasize that people and their capabilities should be the ultimate criteria for assessing the development of a country, not economic growth alone. The HDI can also be used to question national policy choices, asking how two countries with the same level of GNI per capita can end up with different human development outcomes.

4.60.1 Human Development Index

QoG Code: `undp_hdi`

The HDI was created to emphasize that people and their capabilities should be the ultimate criteria for assessing the development of a country, not economic growth alone. The HDI can also be used to question national policy choices, asking how two countries with the same level of GNI per capita can end up with different human development outcomes. These contrasts can stimulate debate about government policy priorities.

The Human Development Index (HDI) is a summary measure of average achievement in key dimensions of human development: a long and healthy life, being knowledgeable and having a decent standard of living. The HDI is the geometric mean of normalized indices for each of the three dimensions. The closer the score is to 1, the better the country is doing.

The health dimension is assessed by life expectancy at birth, the education dimension is measured by mean of years of schooling for adults aged 25 years and more and expected years of schooling for children of school entering age. The standard of living dimension is measured by gross national income per capita. The HDI uses the logarithm of income, to reflect the diminishing importance of income with increasing GNI. The scores for the three HDI dimension indices are then aggregated into a composite index using geometric mean. Refer to Technical notes for more details.

The HDI simplifies and captures only part of what human development entails. It does not reflect on inequalities, poverty, human security, empowerment, etc. The HDRO offers the other composite indices as broader proxy on some of the key issues of human development, inequality, gender disparity and human poverty.

4.61 ICTD/UNU-WIDER Government Revenue Dataset

Dataset by: International Centre for Tax and Development and UNU-WIDER

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

ICTD/UNU-WIDER. (2022). Government revenue dataset [Version 2022]. <https://www.wider.unu.edu/project/government-revenue-dataset>

Dataset found at: <https://www.wider.unu.edu/project/government-revenue-dataset>

Last update by original source: 2022-10-14

Date of download: 2022-12-05

The GRD aims to present a complete picture of government revenue and tax trends over time and allows for analysis at the country, regional or cross-country level. Where possible, figures are expressed both inclusive and exclusive of natural resource revenues, which helps to overcome a major obstacle to cross-country comparisons in existing data sources.

4.61.1 Grants

QoG Code: `ictd_grants`

Total grants received by the government.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2020
N. of countries: 168

Available in Time-series

Time-series min. year: 1980
Time-series max. year: 2021
Total N. of countries covered: 186

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.2 Consolidated Non-Tax Revenue

QoG Code: ictd_nontax

Total non-tax revenue, comprising data categorized as either "non-tax revenue" or "other revenue" depending on the underlying source. Includes revenue from both resource and non-resource sources.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2020 N. of countries: 168	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 188
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.3 Revenue (excluding social contributions)

QoG Code: ictd_revexsc

Total government revenue, excluding social contributions.

Social contributions are contributions toward a specific area of public spending. Some countries do not report on this type of contributions.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2020 N. of countries: 165	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 184

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.4 Revenue (including social contributions)

QoG Code: ictd_revinsc

Total government revenue including taxes, non-tax revenue, grants and social contributions.

Social contributions are contributions toward a specific area of public spending. Some countries do not report on this type of contributions.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2020

4.61.5 Total Resource Revenue

QoG Code: ictd_revres

Total natural resource revenues, including natural resource revenues reported as "tax revenue" or "non-tax revenue". Natural resources are here defined as natural resources that include a significant component of economic rent, primarily from oil and mining activities.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2021 N. of countries: 132	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 154
Overall country availability	Time-series availability
	

[Find more information about this variable in the QoG Data Finder](#)

4.61.6 Social Contributions

QoG Code: ictd_soccon

Total social contributions.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2020 N. of countries: 163	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 187

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.7 Taxes on Corporations and Other Enterprises

QoG Code: `ictd_taxcorp`

Total income and profit taxes on corporations, including taxes on resource firms.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2020
N. of countries: 134

Available in Time-series

Time-series min. year: 1980
Time-series max. year: 2021
Total N. of countries covered: 175

Time-series availability

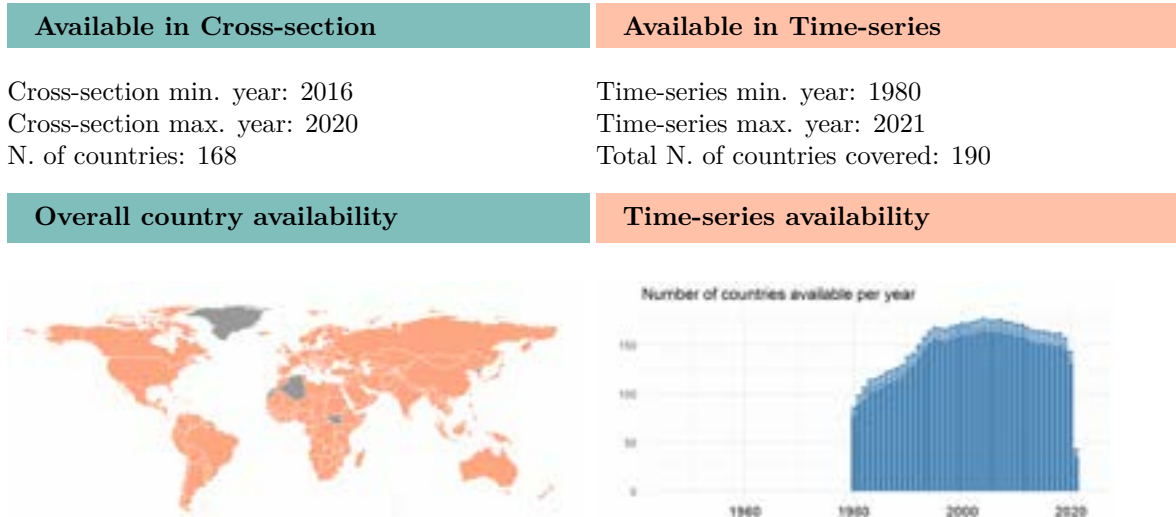

[Find more information about this variable in the QoG Data Finder](#)

4.61.8 Taxes (excluding social contributions)

QoG Code: `ictd_taxexsc`

Total tax revenue, excluding social contributions.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.61.9 Taxes on Goods and Services

QoG Code: ictd_taxgs

Total taxes on goods and services, which includes (but it is not necessarily always equal to) sales taxes and excise taxes.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.10 Taxes on Income, Profits, and Capital Gains

QoG Code: `ictd_taxinc`

Total taxes on income, profits and capital gains, including taxes on natural resource firms. This figure is always exclusive of social contributions. The total value of Taxes on Income, Profits and Capital Gains may sometimes exceed the sum of Individuals and Corporations, due to revenues that are unallocated between the two.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2021
N. of countries: 156

Available in Time-series

Time-series min. year: 1980
Time-series max. year: 2021

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.11 Taxes on Individuals

QoG Code: ictd_taxind

Total income, capital gains and profit taxes on individuals. This figure is always exclusive of resource revenues in available sources.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2020 N. of countries: 131	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 176
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.12 Indirect Taxes

QoG Code: ictd_taxindirect

Total indirect taxes, including resource revenues. Includes taxes on goods and services, taxes on international trade and other taxes. Indirect may exceed the sum of Taxes on Goods and Services, Taxes on International Trade and Transactions and Other Taxes due to unallocated revenue not classified in any of these categories.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2021 N. of countries: 164	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 188

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.13 Taxes (including social contributions)

QoG Code: `ictd_taxinsc`

Total tax revenue, including social contributions.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2020
N. of countries: 168

Available in Time-series

Time-series min. year: 1980
Time-series max. year: 2021
Total N. of countries covered: 186

Overall country availability

Time-series availability

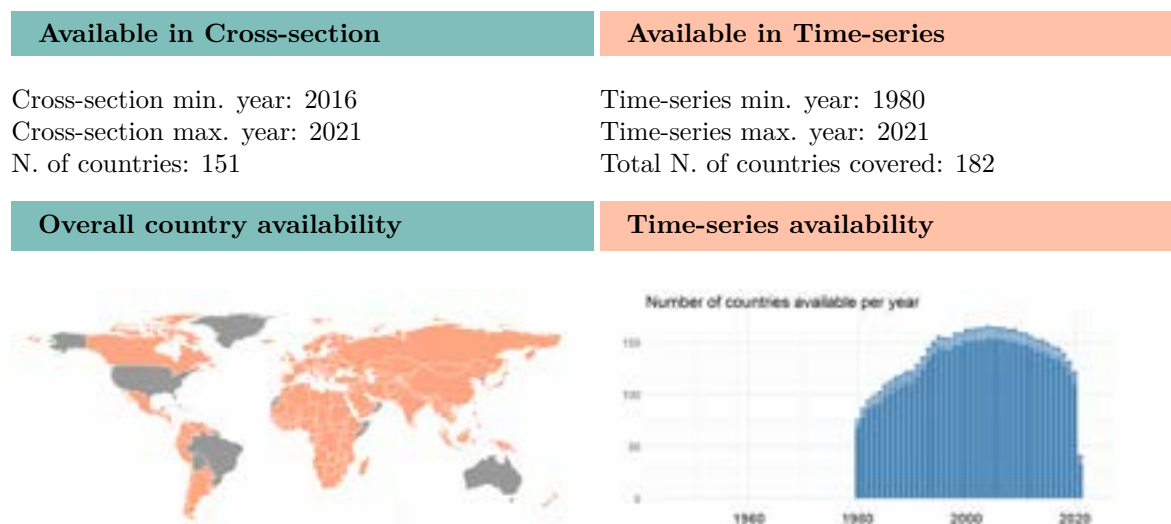

[Find more information about this variable in the QoG Data Finder](#)

4.61.14 Non-resource Tax (excluding social contributions)

QoG Code: `ictd_taxnresexsc`

Total non-resource tax revenue, excluding social contributions. Calculated as 'Taxes excluding social contributions' minus 'resource taxes'. This is the variable recommended for econometric analysis, as it is most complete and consistent across countries.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.61.15 Non-Resource Tax (including social contributions)

QoG Code: ictd_taxnresinsc

Total non-resource tax revenue, including social contributions. Calculated as "Taxes including social contributions" minus "resource taxes".

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.16 Other Taxes

QoG Code: `ictd_taxother`

Total other taxes. These refer to the taxes that have not been considered by other specific categories in the dataset.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2021
N. of countries: 151

Available in Time-series

Time-series min. year: 1980
Time-series max. year: 2021

4.61.17 Taxes on Payroll and Workforce

QoG Code: ictd_taxpaywf

Total taxes on payroll and workforce. This variable is entirely distinct from social contributions, though in underlying sources, social contributions are very occasionally reported as payroll taxes.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2020 N. of countries: 123	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 157
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.18 Taxes on Property

QoG Code: ictd_taxprop

Total taxes on property.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2020 N. of countries: 132	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 172

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.19 Resource Taxes

QoG Code: ictd_taxres

Component of reported tax revenue that is from natural resource sources, most often corporate taxation of resource firms.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2021
N. of countries: 149

Available in Time-series

Time-series min. year: 1980
Time-series max. year: 2021
Total N. of countries covered: 179

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.61.20 Taxes on International Trade and Transactions

QoG Code: ictd_taxtrade

Total taxes on international trade, including both import and export taxes. In some cases this figure may also include VAT collected at the border, where countries consistently report revenue in this way.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2021
N. of countries: 160

Available in Time-series

Time-series min. year: 1980
Time-series max. year: 2021

The IMF Government Finance Statistics (GFS) database contains fiscal data for all reporting countries in the framework of the Government Finance Statistics Manual 2014 (GFSM 2014). It includes detailed data on revenues, expenditures, transactions in financial assets and liabilities, and balance sheet data and includes data for the general government sector and its subsectors (e.g., central government, local government, state government and social security funds). GFS data are compiled by country authorities and reported to the IMF Statistics Department annually.

The data reported in the QoG Datasets is retrieved from Expenditure by Function of Government (COFOG) dataset, as the percentage of total expenditure by general government.

Please bear in mind, these data is produced and owned by the IMF, so please comply with their terms of use when working with this dataset.

4.62.1 Expenditure on defense (% of total gen. gov. exp.)

4.63 Ibrahim Index of African Governance

Dataset by: Mo Ibrahim Foundation

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Mo Ibrahim Foundation. (2020). The Ibrahim Index of African Governance. <http://mo.ibrahim.foundation/iiag/>

Dataset found at: <https://mo.ibrahim.foundation/iiag>

Last update by original source: 2023-01-25

Date of download: 2023-01-25

The Ibrahim Index of African Governance (IIAG) is a tool that measures and monitors governance performance in African countries. The IIAG governance framework comprises four categories: Safety & Rule of Law, Participation & Human Rights, Sustainable Economic Opportunity and Human Development. These categories are made up of 14 sub-categories, consisting of 100 indicators. The IIAG is refined on an annual basis. Refinements may be methodological, or based on the inclusion or exclusion of indicators. Different IIAG datasets are not comparable between themselves as they cover a different ten-year period, data are revised retrospectively, and the theoretical framework is updated between iterations. Users of the Index should therefore always reference the most recent version of the IIAG dataset.

4.63.1 Accountability and Transparency

QoG Code: `iiag_acc`

Accountability & Transparency is one of the four sub-categories that are used to calculate the Security & Rule of Law category score. It consists of five indicators from six data sources.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019

4.65 Information Capacity Dataset

Dataset by: Brambor, Goenaga, Lindvall and Teorell

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Brambor, T., Goenaga, A., Lindvall, J., & JanTeorell. (2020). The lay of the land: Information capacity and the state. *Comparative Political Studies*, 53(2), 175–213. <https://doi.org/10.1177/0010414019843432>

Dataset found at: <http://www.stanceatlund.org/information-capacity-dataset.html>

Date of download: 2022-11-28

The original Information Capacity Dataset offers numerical data on five institutions and policies that modern states use to collect information about their populations and territories: (1) the regular implementation of a reliable census, (2) the regular release of statistical yearbooks, the operation of (3) civil and (4) population registers, and (5) the establishment of a government agency tasked with processing statistical information. Based on these five indicators, an overall index of information capacity is calculated for 85 polities from 1750 to 2015.

4.65.1 Information Capacity

QoG Code: icd_infcapirt

The aggregate index of information capacity. It is based on a hybrid two-parameter and graded Item Response Model (IRT) that is based on five component indicators - when the country first established a statistical agency, whether the country had in place a civil register and a population register, and the graded indexes of census ability and yearbook ability.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2012

Total N. of countries covered: 72

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.65.2 Information Capacity (year 1750)

QoG Code: icd_infcapirt1750

The aggregate index score of information capacity for the year of 1750. It is based on a hybrid two-parameter and graded Item Response Model (IRT) that is based on five component indicators - when the country first established a statistical agency, whether the country had in place a civil register and a population register, and the graded indexes of census ability and yearbook ability.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 0
Cross-section max. year: 0
N. of countries: 48

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2015
Total N. of countries covered: 52

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.65.3 Information Capacity (year 1800)

QoG Code: icd_infcapirt1800

The aggregate index score of information capacity for the year of 1800. It is based on a hybrid two-parameter and graded Item Response Model (IRT) that is based on five component indicators - when the country first established a statistical agency, whether the country had in place a civil register and a population register, and the graded indexes of census ability and yearbook ability.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 0 Cross-section max. year: 0 N. of countries: 48	Time-series min. year: 1946 Time-series max. year: 2015 Total N. of countries covered: 52
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.65.4 Information Capacity (year 1850)

QoG Code: icd_infcapirt1850

The aggregate index score of information capacity for the year of 1850. It is based on a hybrid two-parameter and graded Item Response Model (IRT) that is based on five component indicators - when the country first established a statistical agency, whether the country had in place a civil register and a population register, and the graded indexes of census ability and yearbook ability.

Type of variable: Continuous

Available in Time-series

4.66 Institutional Quality Dataset

Dataset by: Aljaz Kuncic

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Kuncic, A. (2014). Institutional quality dataset. *Journal of Institutional Economics*, 10(01), 135–161. <https://doi.org/10.1017/S1744137413000192>

Dataset found at: <https://sites.google.com/site/aljazkuncic/research>

Last update by original source: 2013-03-12

Date of download: 2022-09-13

More than 30 established institutional indicators can be clustered into three homogeneous groups of formal institutions: legal, political and economic, which capture to a large extent the complete formal institutional environment of a country. The latent qualities of legal, political and economic institutions for every country in the world and for every year are calculated. On this basis, a legal, political and economic World Institutional Quality Ranking are proposed, through which one can follow whether a country is improving or worsening its relative institutional environment. The calculated latent institutional quality measures can be useful in further panel data applications and add to the usual practice of using simply one or another index of institutional quality to capture the institutional environment.

4.66.1 Cluster memberships based on means

QoG Code: kun_cluster

Cluster membership based on means.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1990

Time-series max. year: 2010

4.67 Institutions and Elections Project Data

Dataset by: Institutions and Elections Project

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Wig, T., Hegre, H., & Regan, P. M. (2015). Updated data on institutions and elections 1960–2012: Presenting the iaep dataset version 2.0. *Research & Politics, 2*(2). <https://doi.org/10.1177/2053168015579120>

Dataset found at: <https://hvardhegre.net/iaep/>

Last update by original source: 2015-05-20

Date of download: 2022-11-28

Institutions and Elections Project Data (version 2.0). The objective of the data from the Institutions and Elections Project (IAEP) is to describe the formal institutions that are in place, even if practice does not comport with those formal rules. The data refers to the situation January 1st each year. Note: According to the documentation of the data many of the cases "have more than one executive; [...] the executive referred to may be any one of the executives established in a country". We urge users to refer to the documentation at the IAEP web site for information about which executive each particular case refers to.

Note: Changes from the original version: The dataset has two types of missing values, logical missing values and actual missing values. In the QoG data, logical missing values were recoded to actual missing values. To access data with logical missing values please use original dataset.

4.67.21 Electoral System

QoG Code: iaep_es

What is the type of electoral system for legislative elections?

1. Plurality (First past the post)
2. Majority
3. Proportional representation
4. Mixed systems (combination of PR and either plurality or majority). This option includes situations in which a single chamber contains seats selected by different methods, or situations in which all of the seats in a chamber are chosen with the same method, but each chamber is selected through different methods.

4.67.22 Electoral System for the Executive

QoG Code: iaep_ese

Election rules governing the determination of electoral outcomes for the executive: we record data on the electoral requirements for winning executive elections, specifically, the sorts of vote thresholds required for winners. If the executive is appointed or otherwise comes to power via non-electoral processes, we code this as missing.

1. Majority rule (50% + 1). Where run-offs are held, "majority rule" is selected, as the intention of a run-off election is to have one candidate receive a majority of the votes.
2. Plurality
3. No official, explicit, rule governing the outcome
4. Party leader of majority party/coalition in legislature is automatically selected without additional process

Source: IAEP (Wig et al., 2015)

Type of variable: Categorical

Dataset found at: <https://www.worldvaluessurvey.org/WVSEVStrend.jsp>

Last update by original source: 2022-12-14

Date of download: 2023-01-26

The European Value Study (EVS) and the World Value Survey (WVS) are two large-scale, cross-national, and repeated cross-sectional longitudinal survey research programs. Since their emergence in the early 1980s, the EVS has conducted 5 survey waves (every 9 years), and the WVS has conducted 7 survey waves (every 5 years). Both research programs include a large number of questions, which have been replicated over time and across the EVS and the WVS surveys. Such repeated questions constitute the Integrated Values Surveys (IVS), the joint EVS-WVS time-series data, which at the moment covers a 41-years period (1981-2022).

The variables are country averages calculated using the population weight provided by WVS/EVS.

4.68.1 Autonomy Index

QoG Code: `wvs_auton`

The Autonomy Index is a computed variable based on the Children qualities battery.

It uses only four variables (using WVS R6 variable naming and codes):

1. V19= Important Child Qualities: Religious Faith
2. V21= Important Child Qualities: Obedience
3. V12= Important Child Qualities: Independence
4. V18= Important Child Qualities: Determination, Perseverance

Only variables with answers to all v19,v21,v12,18 have an index.

Type of variable: Continuous

4.69 Inter-Parliamentary Union Data

Dataset by: Inter-Parliamentary Union

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Inter-Parliamentary Union. (2022). Parline database: Monthly ranking of women in national parliaments. <https://data.ipu.org/women-ranking>

Dataset found at: <https://data.ipu.org/women-ranking>

Last update by original source: 2022-08-01

Date of download: 2022-09-21

The data has been compiled by the Inter-Parliamentary Union on the basis of information provided by National Parliaments. Comparative data on the world and regional averages as well as data concerning the two regional parliamentary assemblies elected by direct suffrage can be found on separate pages.

Note: The figures for South Africa on the distribution of seats in the Upper House do not include the 36 special rotating delegates appointed on an ad hoc basis, and all percentages given are therefore calculated on the basis of the 54 permanent seats. Included in the QoG Dataset are the data for January each year.

4.69.1 Number of Seats (Lower and Single Houses)

4.70 KOF Index of Globalization

Dataset by: ETH Zurich

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Gygli, S., Haelg, F., Potrafke, N., & Sturm, J.-E. (2019). The KOF Globalisation Index - Revisited. <https://doi.org/10.1007/s11558-019-09344-2>

Dreher, A. (2006). Does globalization affect growth? evidence from a new index of globalization. *Applied Economics*, 38(10), 1091–1110

Dataset found at: <https://kof.ethz.ch/en/forecasts-and-indicators/indicators/kof-globalisation-index.html>

Last update by original source: 2022-12-06

Date of download: 2023-01-03

The KOF Globalization Index measures the economic, social and political dimensions of globalization. It is used in order to monitor changes in the level of globalization of different countries over extended periods of time. The current KOF Globalization Index is available for 190 countries and covers the period from 1970 until 2022. A distinction is drawn between de facto and de jure for the Index as a whole, as well as within the economic, social and political components.

The Index measures globalization on a scale of 1 to 100, where higher values indicate a higher degree of globalization. The figures for the constituent variables are expressed as percentiles. This means that outliers are smoothed and ensures that fluctuations over time are lower. Due to the new methodology, the current Index is only to a limited extent comparable to the old KOF Globalization Index.

4.70.1 Economic Globalization

QoG Code: dr_eg

Economic globalisation (scale of 1 to 100) covers both trade flows as well as financial flows. De facto trade is determined with reference to the trade in goods and services. De jure trade covers customs duties, taxes and restrictions on trade.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 185

Available in Time-series

Time-series min. year: 1970
Time-series max. year: 2020
Total N. of countries covered: 190

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.70.2 Index of Globalization

QoG Code: dr_ig

The overall index of globalization (scale of 1 to 100) is the weighted average of the following variables: economic globalization, social globalization and political globalization (dr_eg, dr_sg and dr_pg). Most weight has been given to economic followed by social globalization.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 189

Available in Time-series

Time-series min. year: 1970
Time-series max. year: 2020
Total N. of countries covered: 194

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.70.3 Political Globalization

QoG Code: dr_pg

Political globalisation (scale of 1 to 100) regards the de facto segment measured with reference to the number of embassies and international non-governmental organisations (NGOs), along with participation in UN peacekeeping missions. The de jure segment contains variables focussing on the membership of international organisations and international treaties.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 189	Time-series min. year: 1970 Time-series max. year: 2020 Total N. of countries covered: 195
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.70.4 Social Globalization

QoG Code: dr_sg

Social globalization (scale of 1 to 100) is comprised of three segments, each with its own de facto and de jure segment. Interpersonal contact is measured within the de facto segment with reference to international telephone connections, tourist numbers and migration. Within the de jure segment, it is measured with reference to telephone subscriptions, international airports and visa restrictions. Flows of information are determined within the de facto segment with reference to international patent applications, international students and trade in high technology goods. The de jure segment measures access to TV and the internet, freedom of the press and international internet connections. Cultural proximity is measured in the de facto segment from trade in cultural goods, international trademark registrations and the number of McDonalds restaurants and IKEA stores. The de jure area focuses on civil rights (freedom of citizens), gender equality and public spending on school education.

Date of download: 2022-12-12

LIS, formerly known as The Luxembourg Income Study, is a data archive and research center dedicated to cross-national analysis. LIS is home to two databases, the Luxembourg Income Study Database, and the Luxembourg Wealth Study Database. The Luxembourg Income Study Database (LIS), under constant expansion, is the largest available database of harmonised microdata collected from multiple countries over a period of decades. The newer Luxembourg Wealth Study Database (LWS), is the only cross-national wealth microdatabase in existence.

4.73 Measures of Democracy 1810-2018

Dataset by: Tatu Vanhanen

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Vanhanen, T. (2019). Measures of democracy 1810-2018 [dataset] [Version 8.0]. <http://urn.fi/urn:nbn:fi:fsd:T-FSD1289>

Finnish Social Science Data Archive [producer and distributor]. (2019). Measures of democracy 1810-2018 [codebook] [Version 8.0]

Dataset found at: https://services.fsd.tuni.fi/catalogue/FSD1289?study_language=en

Last update by original source: 2019-06-17

Date of download: 2022-09-30

The data contain three different variables, created by Tatu Vanhanen. The variables in question are political competition, political participation and the index of democratization.

4.73.1 Competition

QoG Code: van_comp

The competition variable portrays the electoral success of smaller parties, that is, the percentage of votes gained by the smaller parties in parliamentary and/or presidential elections. The variable is calculated by subtracting from 100 the percentage of votes won by the largest party (the party which wins most votes) in parliamentary elections or by the party of the successful candidate in presidential elections. Depending on their importance, either parliamentary or presidential elections are used in the calculation of the variable, or both elections are used, with weights. If information on the distribution of votes is not available, or if the distribution does not portray the reality accurately, the distribution of parliamentary seats is used instead. If parliament members are elected but political parties are not allowed to take part in elections, it is assumed that one party has taken all votes or seats. In countries where parties are not banned but yet only independent candidates participate in elections, it is assumed that the share of the largest party is not over 30 percent.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017

Cross-section max. year: 2018

N. of countries: 187

Available in Time-series

Time-series min. year: 1946

Time-series max. year: 2018

Total N. of countries covered: 200

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.73.2 Index of Democratization

QoG Code: van_index

The index of democratization is formed by multiplying the competition and the participation variables and then dividing the outcome by 100.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2017
Cross-section max. year: 2018
N. of countries: 187

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2018
Total N. of countries covered: 200

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.73.3 Participation

QoG Code: van_part

The political participation variable portrays the voting turnout in each election, and is calculated as the percentage of the total population who actually voted in the election. In the case of indirect elections, only votes cast in the final election are taken into account. If electors have not been elected by citizens, only the number of actual electors is taken into account, which means that the degree of participation drops to the value 0. If an election to choose electors has been held, the participation variable is calculated from the number and distribution of votes in that election. National referendums raise the variable value by five percent and state (regional) referendums by one percent for the year they are held. Referendums can add the degree of participation at maximum by 30 percent a year. The value of the combined degree of participation cannot be higher than 70 percent, even in cases where the sum of participation and referendums would be higher than 70.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2017 Cross-section max. year: 2018 N. of countries: 187	Time-series min. year: 1946 Time-series max. year: 2018 Total N. of countries covered: 200
Overall country availability	Time-series availability

4.75 Multidimensional Index of Bureaucratic Underrepresentation

Dataset by: Luciana Cingolani

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Cingolani, L. (2022). Diversity in the public administration: A multidimensional index of bureaucratic underrepresentation. <https://doi.org/https://doi.org/10.7910/DVN/IEPHLG>

Dataset found at: <https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/IEPHLG&faces-redirect=true>

Last update by original source: 2022-08-24

Date of download: 2022-12-19

This dataset presents a time-series cross-sectional Index of Bureaucratic Underrepresentation (IBU) covering a total of 37 European countries between 2008 and 2018 (unbalanced). It aggregates levels of bureaucratic representation on five common diversity dimensions, namely gender, ethnicity, nationality, age and disability. It uses household survey data from the European Social Survey (ESS) rounds 4 to 9, profiting from its representativeness and intended cross-country comparability (ESS 2020).

4.75.1 Multidimensional Index of Bureaucratic Underrepresentation

QoG Code: `mibu_ibu`

The Multidimensional Index of Bureaucratic Under-representation aims to give a snapshot of the incidence and depth of the underrepresentation in the bureaucratic apparatus of each country in five different dimensions: female/male, ethnic minorities, Non-nationals, Young people and people with disabilities.

It uses ESS microdata on the occupation of individuals, registering whether they work in the public sector (either in the central / local government or in decentralized public services such as health or education). After adjusting for the analytical weights indicated by ESS administrators this allows for the possibility to approximate comparisons between the demographic characteristics of public sector officials versus the broader country population.

4.76 National Elections Across Democracy and Autocracy, Version 6

Dataset by: Hyde and Marinov

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Hyde, S. D., & Marinov, N. (2012). Which elections can be lost? *Political Analysis*, 20(2), 191–201

Hyde, S. D., & Marinov, N. (2021). Codebook for national elections across democracy and autocracy dataset, 5.0. <https://nelda.co/>

Dataset found at: <http://www.nelda.co/>

Last update by original source: 2021-07-23

Date of download: 2022-08-15

The National Elections across Democracy and Autocracy (NELDA) dataset provides detailed information on all election events from 1945-2020. To be included, elections must be for a national executive figure, such as a president, or for a national legislative body, such as a parliament, legislature, constituent assembly, or other directly elected representative bodies. In order for an election to be included, voters must directly elect the person or persons appearing on the ballot to the national post in question. Voting must also be direct, or by the people in the sense that mass voting takes place. Microstates are now included but were not part of NELDA Versions 1-4.

4.76.1 First Multiparty Election

QoG Code: `nelda_fme`

This indicates when a newly independent country is having its first elections, when a country holds the first multiparty elections after a significant period of non-democratic rule, or when a country transitions from single-party elections to multiparty elections. Multiparty means that more than one party is allowed to contest the election, and that at least some of the parties are both nominally and effectively independent of the ruling actors.

4.76.2 Media Bias before Election

QoG Code: nelda_mbbe

If there were reports by either domestic or outside actors of media bias in favor of the incumbent or ruling party, it is coded as a "Yes". In cases where the media is totally controlled by the government, and/or no opposition is allowed, the answer is "Yes". It is possible that the answer is "No" even if the political system is tightly controlled.

Type of variable: Categorical

4.76.3 Was More Than One Party Legal

QoG Code: nelda_mtop

This variable indicates whether multiple political parties were technically legal. The legalization of multiple parties need not necessarily mean the existence of a functioning opposition party, as there may be other non-legal barriers to the development of an opposition party. Similarly, a well organized opposition party may exist but may not be legal.

Type of variable: Categorical

Last update by original source: 2021-12-13

Date of download: 2023-01-02

The Natural Resource Protection and Child Health Indicators, 2021 Release, is produced in support of the U.S. Millennium Challenge Corporation (MCC) as selection criteria for funding eligibility. The Natural Resource Protection Indicator (NRPI) and Child Health Indicator (CHI) are based on proximity-to-target scores ranging from 0 to 100 (at target). The NRPI covers 135 countries and is calculated based on the weighted average percentage of biomes under protected status. The CHI is a composite index for 194 countries derived from the average of three proximity-to-target scores for access to at least basic water and sanitation, along with child mortality. The 2021 release includes a consistent time series of NRPI scores for 2017 to 2021 and CHI scores for 2010 to 2020.

4.77.1 Natural Resource Protection Indicator

QoG Code: nrmi_nrpi

Natural Resource Protection Indicator assesses whether a country is protecting at least 17% of all of its biomes (e.g. deserts, forests, grasslands, aquatic, and tundra). It is designed to capture the comprehensiveness of a government's commitment to habitat preservation and biodiversity protection. The World Wildlife Fund provides the underlying biome data, and the United Nations Environment Program World Conservation Monitoring Center provides the underlying data on protected areas.

4.78 New Parties and Party System Innovation in Western Europe

Dataset by: Vincenzo Emanuele

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Emanuele, V. (2016). Dataset of new parties and party system innovation in western europe since 1945. <https://doi.org/10.7802/1363>

Dataset found at: <http://www.vincenzoemanuele.com/dataset-of-party-system-innovation.html>

Last update by original source: 2021-09-27

Date of download: 2022-09-29

This dataset identifies and lists all the new parties emerged in Western Europe since 1945 and provides data about party system innovation, defined as the aggregate level of 'newness' recorded in a party system at a given election. Data are based on parliamentary elections (lower house) of 20 Western European countries since 1945. This dataset covers the entire universe of Western European elections held after World War II under democratic regimes. Data for Greece, Portugal and Spain have been collected after their democratizations in the 1970s.

4.78.1 Cumulative Party System Innovation

QoG Code: psi_cpsi1

Cumulative Party System Innovation: sum of the vote share received by non-founder parties in each election. A party is considered as a founder if it has received at least 1% of the national vote share in at least one of the first two post-WWII elections (or, in the case of Greece, Portugal and Spain, the first two democratic elections). Otherwise, the party is counted as a non-founder. The rationale behind this choice is that we look at the first two post-WWII or post-authoritarian elections and make a dichotomous distinction between relevant parties that formed the system (those who received more than 1% of the votes) and parties that emerged later or were only marginal actors (those below 1%) at that time.

Type of variable: Continuous

Available in Cross-section

4.78.5 Party System Innovation (overall vote share of new parties in given election)

QoG Code: psi_psi1

Party System Innovation: overall vote share of new parties in a given election. It is calculated at time t with respect to time $t-1$ (namely, PSInn is calculated with respect to the status quo established at the previous election) and therefore each observation in each country is completely independent from the previous ones. In order to exclude marginal parties, the author has set a threshold at 1% of the national share for a given party to be considered as part of the party system in a given election and has collected data starting from the third post-World War II or democratic election of each country, for a total of 209 new parties (see the complete list of new parties below) in 327 elections. The underlying assumption is that the party system innovation they are interested in is that occurring after the initial institutionalization of the party system. According to PSInn, a party is considered 'new' only in the first election when it enters the party system by receiving at least 1% of the national share. Then, in the subsequent elections, it becomes 'old'.

4.79 Oil and Gas Data, 1932-2014

Dataset by: Michael L Ross

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Ross, M., & Mahdavi, P. (2015). Oil and gas data, 1932-2014. <https://doi.org/10.7910/DVN/ZTPW0Y>

Dataset found at: <https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/ZTPW0Y>

Last update by original source: 2015-09-24

Date of download: 2022-09-01

Global dataset of oil and natural gas production, prices, exports, and net exports. These data are based on the best available information about the volume and value of oil and natural gas production in all countries from 1932 to 2014. The volume figures are from the documents listed in the original source; to calculate the total value of production, the author multiplies the volume by the world price for oil or gas. Since these are world prices for a single (benchmark) type of oil/gas, they only approximate the actual price - which varies by country according to the quality, the terms of contracts, the timing of the transactions, and other factors. These figures do not tell how much revenues were collected by governments or companies - only the approximate volume and value of production. Data on oil production from 1946 to 1969, and gas production from 1955 (when it first was reported) to 1969, are from the US Geological Survey Minerals Yearbook, for various years.

4.79.1 Gas exports, billion cubic feet per year

4.80 Open Budget Survey data

Dataset by: International Budget Partnership

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

International Budget Partnership. (2019). Open budget survey data [Accessed on 2021-12-01]. <https://www.internationalbudget.org/data-evidence/>

Dataset found at: <https://www.internationalbudget.org/opening-budgets/open-budget-initiative/open-budget-survey/>

Last update by original source: 2022-05-01

Date of download: 2022-09-01

The Open Budget Survey is a comprehensive analysis and survey that evaluates whether governments give the public access to budget information and opportunities to participate in the budget process at the national level. The survey also assesses the capacity and independence of formal oversight institutions. The IBP works with civil society partners in 100 countries to collect the data for the survey.

These materials were developed by the International Budget Partnership. IBP has given us permission to use the materials solely for noncommercial, educational purposes.

4.80.1 Open Budget Index

QoG Code: `ibp_obi`

The Open Budget Index (OBI) is a comparative measure of central government budget transparency. The OBI assigns countries covered by the Open Budget Survey a transparency score on a 100-point scale using 109 of the 140 questions on the Survey. These questions focus specifically on whether the government provides the public with timely access to comprehensive information contained in eight key budget documents in accordance with international good practice standards.

The Penn World Table (PWT) version 10.0 is a database with information on relative levels of income, output, input and productivity, covering 183 countries between 1950 and 2019.

In the Penn World Table the users are offered two different series of data for China. "China Version 1" uses the official growth rates for the whole period. "China Version 2" uses the recent modifications of official Chinese growth rates. We have chosen to include China Version 1.

4.81.1 Capital services at constant 2017 national prices (2017=1)

QoG Code: pwt_cs

Capital services at constant 2017 national prices (2017= 1). Millions of US\$.

Capital services at constant national prices,

based on investment and prices of structures and equipment.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 131

Available in Time-series

Time-series min. year: 1954
Time-series max. year: 2019
Total N. of countries covered: 136

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.81.2 Capital services levels at current PPPs (USA=1)

QoG Code: pwt_csppp

Capital services using prices for structures and equipment that are constant across countries.

Capital services levels at current PPPs (USA = 1).

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 131

Available in Time-series

Time-series min. year: 1954
Time-series max. year: 2019
Total N. of countries covered: 136

Overall country availability

Time-series availability

4.81.3 Share of government consumption at current PPPs

QoG Code: pwt_gc

Share of government consumption at current purchasing power parities (PPPs).

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 171	Time-series min. year: 1950 Time-series max. year: 2019 Total N. of countries covered: 180
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.81.4 Human Capital Index

QoG Code: pwt_hci

Human capital index based on the average years of schooling from Barro and Lee (Barro & Lee, 2013) and an assumed rate of return to education, based on Mincer equation estimates around the world (Psacharopoulos, 1994).

More information can be found in the document "Human capital in PWT 9.0"

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 143	Time-series min. year: 1950 Time-series max. year: 2019 Total N. of countries covered: 152

4.81.6 Share of merchandise imports at current PPPs

QoG Code: pwt_mi

Share of merchandise imports at current PPPs.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.81.7 Price level of capital formation, price level of USA GDPo in 2017=1

QoG Code: pwt_plcf

Price level of capital formation, price level of USA GDPo in 2017=1.

Purchasing power parity is in units of the currency of a country per unit of the currency of the base country, it is common to divide it by the nominal exchange rate to obtain the price level.

GDPo refers to Output-side real GDP at chained PPPs, to compare relative productive capacity across countries and over time.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.81.8 Price level of the capital services, price level of USA=1

QoG Code: pwt_plcs

Price level of the capital services, price level of USA=1.

Purchasing power parity is in units of the currency of a country per unit of the currency of the base country, it is common to divide it by the nominal exchange rate to obtain the price level.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019

Dataset found at: <https://mgmt.wharton.upenn.edu/profile/1327>

Last update by original source: 2017-02-14

Date of download: 2022-09-05

The measure of political constraints estimates the feasibility of policy change (the extent to which a change in the preferences of any one actor may lead to a change in government policy) using the following methodology. First, extracting data from political science databases, it identifies the number of independent branches of government (executive, lower and upper legislative chambers) with veto power over policy change. The preferences of each of these branches and the status quo policy are then assumed to be independently and identically drawn from a uniform, unidimensional policy space. This assumption allows for the derivation of a quantitative measure of institutional hazards using a simple spatial model of political interaction.

4.82.1 Alignment Executive/Legislative Chamber (lower)

QoG Code: h_alignl1

Dummy variable indicating alignment between the executive and the lower legislative chamber, coded 1 when the party controlling the executive branch is either the largest party in the lower legislative chamber or is a member of a ruling coalition in that chamber.

Type of variable: Binary

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 154

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.82.5 Independent Judiciary

QoG Code: h_j

Dummy variable coded 1 if there is an independent judiciary (based on information from Polity's Executive Constraints, p_xconst) and - where available - on ICRG's index of Law & Order.

Type of variable: Binary

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 163

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016
Total N. of countries covered: 183

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.82.6 Legislative Chamber

QoG Code: h_11

Dummy variable coded 1 if there is an effective legislative chamber (based on information from Polity's Executive Constraints, p_xconst).

Type of variable: Binary

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 183	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 200
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.82.7 2nd Legislative Chamber

QoG Code: h_12

Dummy variable coded 1 if there is an effective second legislative chamber, namely, where h_11=1 and records on the composition of a second chamber exist - where that chamber is elected under a distinct electoral system and has a substantive (not merely delaying) role in the implementation of fiscal policy.

Type of variable: Binary

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 183	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 200

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.82.8 Legislative Fractionalization (lower)

QoG Code: h_lflo

Legislative fractionalization is approximately the probability that two random draws from the lower legislative chamber will be from different parties.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2016
N. of countries: 181

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2016

[Find more information about this variable in the QoG Data Finder](#)

4.82.10 Political Constraints Index III

QoG Code: h_polcon3

This index measures the feasibility of policy change, i.e. the extent to which a change in the preferences of any one political actor may lead to a change in government policy. The index is composed from the following information: the number of independent branches of government with veto power over policy change, counting the executive and the presence of an effective lower and upper house in the legislature (more branches leading to more constraint); the extent of party alignment across branches of government, measured as the extent to which the same party or coalition of parties control each branch (decreasing the level of constraint); and the extent of preference heterogeneity within each legislative branch, measured as legislative fractionalization in the relevant house (increasing constraint for aligned executives, decreasing it for opposed executives). The index scores are derived from a simple spatial model and theoretically ranges from 0 to 1, with higher scores indicating more political constraint and thus less feasibility of policy change. Note that the coding reflects information as of January 1 in any given year. Henisz (2002) uses this index to demonstrate that political environments that limit the feasibility of policy change are an important determinant of investment in infrastructure.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 183	Time-series min. year: 1946 Time-series max. year: 2016 Total N. of countries covered: 201
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.82.11 Political Constraints Index V

QoG Code: h_polcon5

This index follows the same logic as Political Constraints Index III (h_polcon3) but also includes two additional veto points: the judiciary and sub-federal entities. Note that the coding reflects information as of January 1 in any given year. Henisz (2000) uses this index to measure the impact on cross-national growth rates of a government's ability to provide credible commitment.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2016 N. of countries: 163	Time-series min. year: 1960 Time-series max. year: 2016 Total N. of countries covered: 183

4.83 Polity V Annual Time-Series, 1800-2018

Dataset by: Marshall and Gurr

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Marshall, M. G., & Gurr, T. R. (2020). Polity v project, political regime characteristics and transitions, 1800-2018

Dataset found at: <http://www.systemicpeace.org/inscrdata.html>

Last update by original source: 2021-02-08

Date of download: 2022-09-01

The Polity project is one of the most widely used data resources for studying regime change and the effects of regime authority. Polity5 Project, Political Regime Characteristics and Transitions, 1800-2018, annual, cross-national, time-series and polity-case formats coding democratic and autocratic "patterns of authority" and regime changes in all independent countries with a total population greater than 500,000 in 2018 (167 countries in 2018). Please note that the codes -99, -88, -77 and -66 have been recoded to missing.

4.83.1 Regime Durability

QoG Code: p_durable

Regime Durability: The number of years since the most recent regime change (defined by a three point change in the p_polity score over a period of three years or less) or the end of a transition period defined by the lack of stable political institutions (denoted by a standardized authority score). In calculating the p_durable value, the first year during which a new (post-change) polity is established is coded as the baseline "year zero" (value = 0) and each subsequent year adds one to the value of the p_durable variable consecutively until a new regime change or transition period occurs.

Type of variable: Discrete

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018	Time-series min. year: 1946
Cross-section max. year: 2018	Time-series max. year: 2018
N. of countries: 165	Total N. of countries covered: 182

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.83.2 Revised Combined Polity Score

QoG Code: p_polity2

Revised Combined Polity Score: The polity score is computed by subtracting the p_autoc score from the p_democ score; the resulting unified polity scale ranges from +10 (strongly democratic) to -10 (strongly autocratic). The revised version of the polity variable is designed to facilitate the use of the polity regime measure in time-series analyses. It modifies the combined annual polity score by applying a simple treatment, or 'fix' to convert instances of 'standardized authority scores' (i.e., -66, -77, and -88) to conventional polity scores (i.e., within the range, -10 to +10). The values have been converted according to the following rule set:

(-66) Cases of foreign 'interruption' are treated as 'system missing.'

(-77) Cases of 'interregnum', or anarchy, are converted to a 'neutral' Polity score of '0.'

(-88) Cases of 'transition' are prorated across the span of the transition.

For example, country X has a p_polity score of -7 in 1957, followed by three years of -88 and, finally, a score of +5 in 1961. The change (+12) would be prorated over the intervening three years at a rate of per year, so that the converted scores would be as follow: 1957 -7; 1958 -4; 1959 -1; 1960 +2; and 1961 +5.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018
Cross-section max. year: 2019
N. of countries: 165

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2020

4.84 QoG Expert Survey (2020 wave)

Dataset by: Nistotskaya, Dahlberg, Dahlström, Sundström, Axelsson, Dalli & Alvarado Pachon

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Nistotskaya, M., Dahlberg, S., Dahlström, C., Sundström, A., Axelsson, S., Dalli, C. M., & Alvarado, N. (2021). The Quality of Government Expert Survey 2020 Dataset: Wave III. <https://doi.org/10.18157/qoges2020>

Dataset found at: <https://www.gu.se/en/quality-government/qog-data/data-downloads/qog-expert-survey>

Last update by original source: 2021-03-15

Date of download: 2022-09-13

The Quality of Government Expert Survey (QoG Expert Survey) is a research project aimed at documenting the organizational design of public bureaucracies and bureaucratic behavior in countries around the world. The third wave of the QoG Expert Survey covers 117 countries and is based on a web survey of 996 experts.

The general purpose of the QoG Expert Survey is to measure the structure and behaviour of public administration across countries. The survey covers a variety of topics which are seen as relevant to the structure and functioning of the public administration according to the literature, but on which we lack quantitative indicators for a large number of countries. The QoG Expert Survey 2020 is the third wave of the QoG Expert Survey, following the first wave in 2008-2012 and the second wave in 2014.

The QoG Expert Survey 2020 produced ten country-level indicators, pertaining to bureaucratic structure (meritocratic recruitment, security of tenure, closedness) and bureaucratic behavior (political interference into day-to-day bureaucratic decision-making and impartiality). The data is based on the assessments of experts from 117 countries, carefully selected for their contextual subject-matter knowledge. The experts took part in the research pro bono. The main innovation of the third wave is the use of anchoring vignettes and Item-Response Theory (IRT)-based aggregation techniques to produce point estimates that account and adjust for systematic differences in expert subjective assessments and variation in expert reliability. The resulting indicators are internally coherent and also correlate well with other well-established measures for the same concepts. The strength of the association between the data from 2020 and the two previous waves of the survey suggests that the data is likely to measure the same underlying phenomena, while offering enough variability over time to be used in time-series analysis.

4.84.1 Entry at the lowest level only

QoG Code: qs20_close1

Country-level estimate for Entry at the lowest level only, scaled between 0 and 1. Highest score refers to cases where entry to bureaucratic positions is possible at the lowest level of hierarchy only, and positions at middle and higher levels of hierarchy are filled by individuals from within the bureaucracy.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 109

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.2 Entry via examination

QoG Code: qs20_close2

Country-level estimate for Entry via examination, scaled between 0 and 1. Countries in which formal examination is usually part of the hiring process have higher scores.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 111

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.3 Special Laws

QoG Code: qs20_close3

Country-level estimate for Special Laws, scaled between 0 and 1. Higher scores mean that human resource management in public administration is regulated by a set of laws and regulations applicable only to the public sector (including government), which is different from the countrys labor code.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 111

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.4 Closedness Index

QoG Code: qs20_close_pca

Closedness Index is constructed from Entry at the lowest level only, Entry via examination and Special Laws with the help of Principal Component Analysis (PCA). Entry at the lowest level only, Entry via examination and Special Laws variables are load on the same dimension, which predicted scores are used as Closedness Index.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 105

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.5 Political Interference

QoG Code: qs20_impar1

Country-level estimate for Political Interference, constructed with an IRT model that accounts for DIF and variation in expert reliability. Higher values stand for more political interference.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 82

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.6 Political Interference, lower limit of 95% credible interval

QoG Code: qs20_impar1_lowci

Lower boundary of 95% credible interval for Political Interference.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 82

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.7 Political Interference, upper limit of 95% credible interval

QoG Code: qs20_impar1_upci

Upper boundary of 95% credible interval for Political Interference.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 82

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.8 Impartiality

QoG Code: qs20_impar2

Country-level estimate for Impartiality, constructed with an IRT model that accounts for DIF and variation in expert reliability. Higher values stand for more impartiality.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 83

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.9 Impartiality, lower limit of 95% credible interval

QoG Code: qs20_impar2_lowci

Lower boundary of 95% credible interval for Impartiality.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 83

Overall country availability

[Find more information about this variable in the QoG Data Finder](#)

4.84.10 Impartiality, upper limit of 95% credible interval

QoG Code: qs20_impar2_upci

Upper boundary of 95% credible interval for Impartiality.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2020

Cross-section max. year: 2020

N. of countries: 83

4.85 Quota Adoption and Reform over Time (QAROT), Version 1, 1947-2015

Dataset by: Hughes, Paxton, Clayton and Zetterberg

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Hughes, M. M., Paxton, P., Clayton, A., & Zetterberg, P. (2017). Quota adoption and reform over time (qarot), 1947-2015 [Ann Arbor, MI: Inter-university Consortium for Political and Social Research [distributor], 2017-08-16.]. <https://doi.org/10.3886/E100918V1>

Dataset found at: https://www.openicpsr.org/openicpsr/project/100918/version/V1/view?path=/openicpsr/100918/fcr:versions/V1/QAROTdata__HughesPaxtonClaytonZetterberg__CountryYear__V1__August2017.csv&type=file

Last update by original source: 2017-08-16

Date of download: 2023-01-08

Quota Adoption and Reform Over Time, or QAROT, is the first longitudinal dataset with information about the adoption, implementation, and reform of national gender quotas across the world. National gender quotas regulate (s)election to national legislatures through constitutional provisions or national laws that require some share of general election candidates or legislators to be women. The dataset includes new measures of quota design, quota thresholds, placement mandates, sanctions for non-compliance, and quota effectiveness. The authors also create a single-variable measure of the presence of an effective quota to be used by comparative politics researchers to control for this powerful institutional feature.

4.85.1 Adopted Gender Quota

QoG Code: qar_adqu

Dummy variable on whether the country has adopted a gender quota as part of its constitution or secondary law. Coded '1' beginning in the year a quota is introduced in the constitution or secondary law and in all subsequent years unless the quota is overturned or withdrawn. Coded for all years.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1947

Time-series max. year: 2015

Total N. of countries covered: 196

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.2 Effective Gender Quota

QoG Code: qar_efqu

Dummy variable for effective gender quota is coded 1 if a county has a quota that reaches a 10 percent de facto threshold for either candidate or reserved seat quotas. Further, candidate quotas are only coded as effective if they have strong sanctions for noncompliance and/or have strong placement mandates. Reserved seats are only coded as effective if they have a legal mechanism specified to fill the reserved seats. This variable indicates a minimally functioning quota that can be included in a wide range of models to control for an important structural feature of political competition. Coded only for country-years where a quota was present.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1947

Time-series max. year: 2015

Total N. of countries covered: 196

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.3 Implemented Gender Quota

QoG Code: qar_imqu

Dummy variable on whether a country has implemented a gender quota in an election. Coded '1' beginning in the year a quota has been implemented in an election – whether or not the law was followed – and in all subsequent years unless the quota is overturned or withdrawn. Coded for all years.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1947

Time-series max. year: 2015

Total N. of countries covered: 196

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.4 Placement Mandates for Gender Quota

QoG Code: qar_plac

Dummy variable on whether a candidate quota includes placement mandates. Coded only for country-years where a quota was present.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1947

Time-series max. year: 2015

Total N. of countries covered: 86

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.5 Strength of Placement Mandates for Gender Quota

QoG Code: qar_plstr

Placement mandates as coded strong if they specify an order that meets or exceeds the threshold set by the quota. For example, if a quota with a 30% threshold requires that women are on every third position on a party list (33%), the placement mandate would be coded strong. Alternatively, placement mandates are coded weak if they are not specific (e.g., place in winnable positions) or require a lower share of women than the legislated threshold (e.g., every 10 candidates for a 15% quota). Coded only for country-years where a quota with placement mandates was present.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1991

Time-series max. year: 2015

Total N. of countries covered: 31

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.6 Sanctions for Noncompliance to Gender Quota

QoG Code: qar_san

Dummy variable on whether a candidate quota includes a sanction for noncompliance. Coded only for country-years where a quota was

present.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1947

Time-series max. year: 2015

Total N. of countries covered: 86

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.7 Strength of Sanctions for Gender Quota

QoG Code: qar_sstr

Sanctions are coded strong only if parties are stopped from participating in the election if they do not comply with the quota rules. If parties are fined or lose state funding, sanctions are coded as weak. Coded only for country-years where a quota with sanctions for noncompliance was present.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1990

Time-series max. year: 2015

Total N. of countries covered: 45

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.8 De facto Threshold of Gender Quota

QoG Code: qar_thr

The product of the percent of legislative seats to which the quota applies and the legislative threshold stipulated by the quota creates the de facto threshold. Valued between 0-100, as the percent of seats.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1947

Time-series max. year: 2015

Total N. of countries covered: 86

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.85.9 Type of Gender Quota

QoG Code: qar_typ

Type of gender quota. 'seats denotes a national quota that reserves a certain percentage of seats in the legislature for women. 'candidate denotes a national gender quota that requires all parties to field a certain percentage of female candidates or nominees. 'both denotes hybrid quotas that use a mix of both types.

Coded only for country-years where a quota was present.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1947

Time-series max. year: 2015

Total N. of countries covered: 86

Overall country availability

Time-series availability

Date of download: 2022-09-13

The Religion and State (RAS) project is a university-based project located at Bar Ilan University in Ramat Gan, Israel. Its goal is to create a set of measures that systematically gauge the intersection between government and religion. Specifically, it examines government religion policy. The project's goals are threefold:

- To provide an accurate description of government religion policies worldwide.
- To create a tool which will lead to greater understanding of the factors which influence government religion policy.
- To provide the means to examine how government religion policy influences other political, social, and economic factors as well as how those factors influence government religion policy.

Round 2 of the RAS dataset, which is currently the official version available for download, measures the extent of government involvement in religion (GIR) or the lack thereof for 175 states on a yearly basis between 1990 and 2014. This constitutes all countries with populations of 250,000 or more as well as a sampling of smaller states. The data includes the following information:

Official Religion: A 15 value variable which measures the official relationship between religion and the state. This includes five categories of official religions and nine categories of state-religion relationships which range from unofficial support for a single religion to overt hostility to all religion.

Religious Support: This includes 51 separate variables which measure different ways a government can support religion including financial support, policies which enforce religious laws, and other forms of entanglement between government and religion.

Religious Restrictions: This includes 29 separate variables which measure different ways governments regulate, restrict, or control all religions in the state including the majority religion. This includes restrictions on religion's political role, restrictions on religious institutions, restrictions on religious

practices, and other forms of regulation, control, and restrictions.

Religious Discrimination: This includes 30 types of restrictions that are placed on the religious institutions and practices of religious minorities that are not placed on the majority group. This includes restrictions on religious practices, restrictions on religious institutions and clergy, restrictions on conversion and proselytizing, and other restrictions.

The dataset also includes several sets of detailed variables measuring certain policies in depth. These topics include religious education, the registration of religious organizations, restrictions on abortion, restrictions on proselytizing, and religious requirements for holding public office or citizenship.

4.86.1 Official Religion

QoG Code: `biu_offrel`

Official Religion measures whether the government has an established religion. For a religion to be established there must be a constitutional clause, a law, or the equivalent explicitly stating that a specific religion or specific religions are the official religions of that state. This variable is coded on the following scale:

0. The State has no official religion
1. The state has multiple established religions
2. The state has one established religion

Type of variable: Categorical

Available in Time-series

Time-series min. year: 1990
Time-series max. year: 2014
Total N. of countries covered: 180

4.87 Rule of Law Index

Dataset by: World Justice Project

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Project, W. J. (2022). WJP Rule of Law Index 2022

Dataset found at: <https://worldjusticeproject.org/>

Last update by original source: 2022-10-06

Date of download: 2023-01-02

The World Justice Project (WJP) developed the WJP Rule of Law Index to serve as a quantitative tool for measuring the rule of law in practice. The Index's methodology and comprehensive definition of the rule of law are the products of intensive consultation and vetting with academics, practitioners, and community leaders from more than 100 countries and jurisdictions and 17 professional disciplines.

4.87.1 Absence of Corruption

QoG Code: `wjp_abs_cor`

Absence of Corruption, Factor 2 of the WJP Rule of Law Index, measures the absence of corruption in government. The factor considers three forms of corruption: bribery, improper influence by public or private interests, and misappropriation of public funds or other resources. These three forms of corruption are examined with respect to government officers in the executive branch, the judiciary, the military, police, and the legislature.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019

Cross-section max. year: 2022

N. of countries: 138

Available in Time-series

Time-series min. year: 2012

Time-series max. year: 2022

4.87.2 ADRs are Accessible, Impartial, and Effective

QoG Code: wjp_adr

Alternative dispute resolution mechanisms are accessible, impartial, and effective. The variable measures if the ADRs are affordable, efficient, enforceable, and free of corruption.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.87.3 Civil Justice

QoG Code: wjp_civ_just

Civil Justice, Factor 7 of the WJP Rule of Law Index, measures whether ordinary people can resolve their grievances peacefully and effectively through the civil justice system. It measures whether civil justice systems are accessible and affordable as well as free of discrimination, corruption, and improper influence by public officials. It examines whether court proceedings are conducted without unreasonable delays and whether decisions are enforced effectively. It also measures the accessibility, impartiality, and effectiveness of alternative dispute resolution mechanisms.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2022 N. of countries: 138	Time-series min. year: 2012 Time-series max. year: 2022 Total N. of countries covered: 138
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.87.4 Civil Justice is Free of Corruption

QoG Code: wjp_cj_cor

Civil justice is free of corruption measures whether the civil justice system is free of bribery and improper influence by private interests.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2022 N. of countries: 138	Time-series min. year: 2012 Time-series max. year: 2022 Total N. of countries covered: 138
Overall country availability	Time-series availability

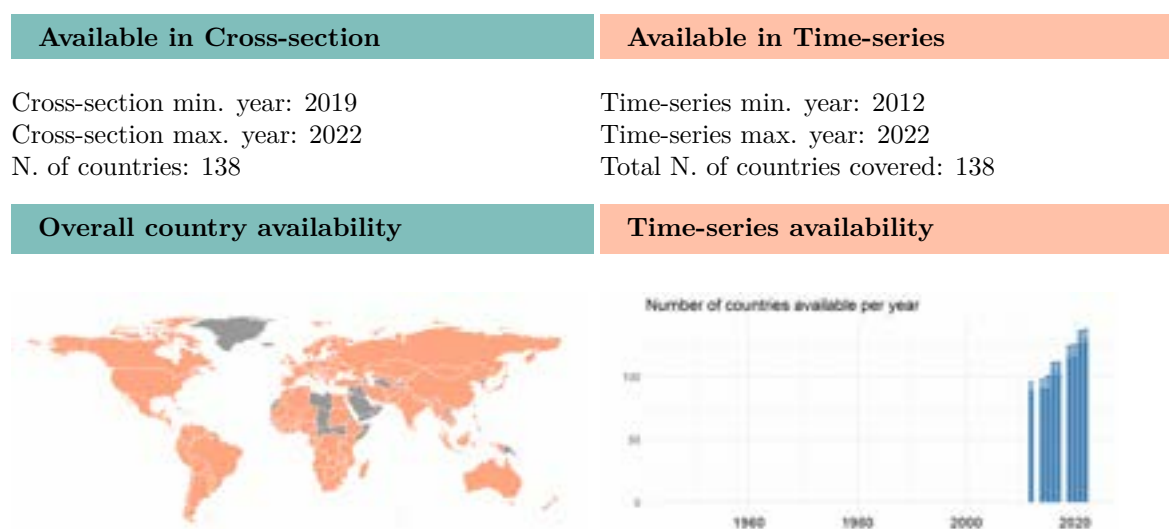

[Find more information about this variable in the QoG Data Finder](#)

4.87.5 Civil Justice is not Subject to Unreasonable Delays

QoG Code: wjp_cj_delay

Civil justice is not subject to unreasonable delays measures whether civil justice proceedings are conducted and judgments are produced in a timely manner without unreasonable delay.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.87.6 Civil Justice is Free of Discrimination

QoG Code: wjp_cj_discr

Civil justice is free of discrimination measures whether the civil justice system discriminates in practice based on socio-economic status, gender, ethnicity, religion, national origin, sexual orientation, or gender identity.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.87.7 Civil Justice is Effectively Enforced

QoG Code: wjp_cj_ef_enf

Civil justice is effectively enforced measures the effectiveness and timeliness of the enforcement of civil justice decisions and judgments in practice.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2022
N. of countries: 138

[Find more information about this variable in the QoG Data Finder](#)

4.87.9 Criminal Justice

QoG Code: `wjp_crim_jus`

Criminal Justice, Factor 8 of the WJP Rule of Law Index, evaluates a country's criminal justice system. An effective criminal justice system is a key aspect of the rule of law, as it constitutes the conventional mechanism to redress grievances and bring action against individuals for offenses against society. An assessment of the delivery of criminal justice should take into consideration the entire system, including the police, lawyers, prosecutors, judges, and prison officers.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2022 N. of countries: 138	Time-series min. year: 2012 Time-series max. year: 2022 Total N. of countries covered: 138

4.87.13 Executive Branch do not use Public Office for Private Gain

QoG Code: wjp_exec_br

Government officials in the executive branch do not use public office for private gain variable measures the prevalence of bribery, informal payments, and other inducements in the delivery of public services and the enforcement of regulations. It also measures whether government procurement and public works contracts are awarded through an open and competitive bidding process, and whether government officials at various levels of the executive branch refrain from embezzling public funds.

4.87.14 Fundamental Rights

QoG Code: wjp_fund_right

Fundamental Rights, Factor 4 of the WJP Rule of Law Index, recognizes that a system of positive law that fails to respect core human rights established under international law is at best rule by law, and does not deserve to be called a rule of law system. Since there are many other indices that address human rights, and because it would be impossible for the Index to assess adherence to the full range of rights, this factor focuses on a relatively modest menu of rights that are firmly established under the United Nations Universal Declaration of Human Rights and are most closely related to rule of law concerns.

Type of variable: Continuous

4.87.16 Constraints on Government Powers

QoG Code: wjp_gov_pow

Constraints on Government Powers, Factor 1 of the WJP Rule of Law Index, measures the extent to which those who govern are bound by law. It comprises the means, both constitutional and institutional, by which the powers of the government and its officials and agents are limited and held accountable under the law. It also includes non-governmental checks on the governments power, such as a free and independent press.

4.89 Social Progress Index

Dataset by: Social Progress Imperative

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Harmacek, J., Krylova, P., & Htitich, M. (2022). Social progress index data. www.socialprogress.org

Dataset found at: <https://www.socialprogress.org/global-index-2022overview>

Last update by original source: 2022-09-26

Date of download: 2022-09-27

The Social Progress Index (SPI) is a well-established measure, published since 2013, that is meant to catalyze improvement and drive action by presenting social outcome data in a useful and reliable way. The 2020 Social Progress Index ranks 169 countries on social progress. It combines 60 social and environmental outcome indicators to calculate an overall score for these countries, based on tiered levels of scoring that include measures in health, safety, education, technology, rights, and more. In addition to the overall scores, three broad dimensions of social progress are also measured: Basic Human Needs, Foundations of Wellbeing, and Opportunity. It also considers the data of 27 additional countries, calculating component and dimension scores when enough data are available. In all, the SPI measures at least some aspects of social progress across more than 99.85% of the world's population.

4.89.1 Basic Human Needs (SPI)

QoG Code: `spi_bn`

Basic Human Needs is one of the three components of the SPI, which are used to calculate the overall Social Progress Index. It assesses a population's capacity to survive with adequate nourishment and basic medical care, clean water, sanitation, adequate shelter, and personal safety.

4.90 State Capacity, Minority Shareholder Protections, and Stock Market Development

Dataset by: Guillén and Capron

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Guillen, M., & Capron, L. (2016). State capacity, minority shareholder protections, and stock market development. *Administrative Science Quarterly*, 61(1), 125–160

Dataset found at: <https://whartonmgmt.wufoo.com/forms/guillencapron-shareholder-protections-index/>

Last update by original source: 2017-11-10

Date of download: 2022-08-15

A longitudinal dataset on the adoption of minority shareholders' legal protections and the development of the stock market in 78 countries between 1970 and 2016.

4.90.1 Minority Shareholder Rights

QoG Code: gc_shr

The ten key legal provisions identified as most relevant to the protection of minority shareholder rights are coded by a team of legal scholars coded between 0 and 1. The measures are not dichotomous because intermediate scores between 0 and 1 are possible. The sum of the scores for each of the ten legal provisions are the value of the variable, ranging from 0 to 10.

The ten legal provisions protecting the rights of minority shareholders:

1. Powers of the general meeting for de facto changes
2. Agenda-setting power
3. Anticipation of shareholder decision facilitated
4. Prohibition of multiple voting rights (super voting rights)
5. Independent board members
6. Feasibility of directors' dismissal
7. Private enforcement of directors' duties (derivative suit)
8. Shareholder action against resolutions of the general meeting
9. Mandatory bid
10. Disclosure of major share ownership

The Sustainable Governance Indicators (SGI) survey addresses one of the most pressing questions facing the highly developed states of the OECD and the European Union in the 21st century: How can we achieve sustainable policy outcomes while ensuring that policy-making processes remain focused on long-term goals?

To answer this question, 41 countries of the OECD and the EU are assessed and compared on the basis of 157 quantitative and qualitative indicators. The qualitative assessment is carried out by more than 100 international experts from the academic community. These country reports are the result of a multiphase process of survey and validation. This allows successful examples of sustainable governance to be identified, along with corresponding policy and governance achievements.

The instrument is based on three pillars: the Sustainable Policies Index, which measures the sustainability of policy outcomes; the Robust Democracy Index, which measures the quality of democracy; and the Good Governance Index, which explores the extent to which a country's institutional arrangements enhance the public sectors capacity to act (executive capacity) as well as the extent to which citizens, NGOs and other organizations are endowed with the participatory competence to hold government accountable to its actions (executive accountability).

4.92.11 Good Governance

QoG Code: `sgi_go`

This pillar of the SGI examines the good governance capacities of a political system in terms of its executive capability and accountability. Sustainable governance is defined here as the political management of public affairs that adopts a long-term view of societal development, takes into account the interests of future generations, and facilitates capacities for social change.

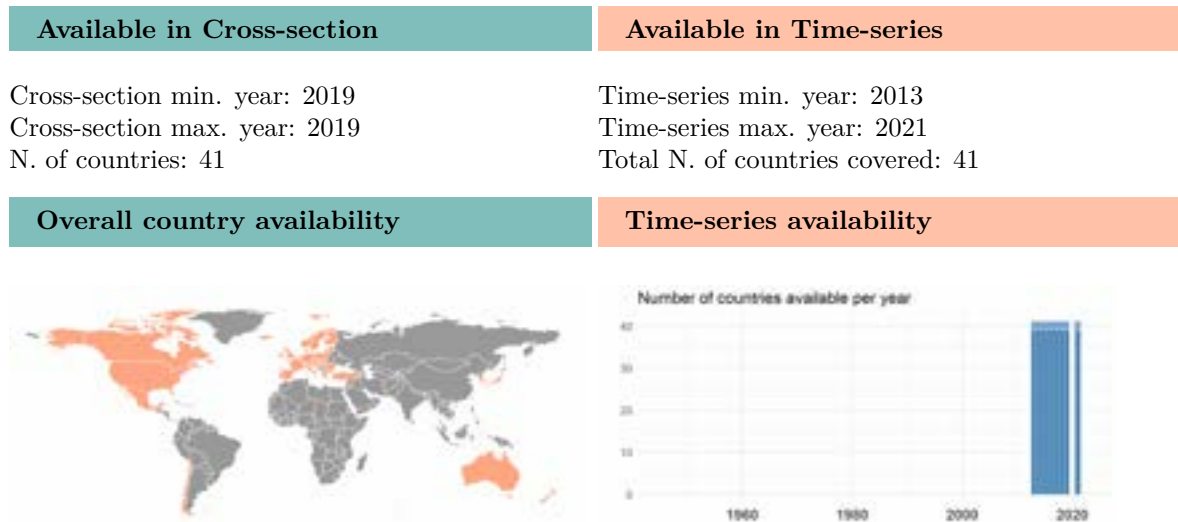

The Governance index examines how effective governments are in directing and implementing policies appropriate to these three goals. As a measuring tool grounded in practical evidence, the Governance index draws on 37 qualitative indicators posed in an expert survey that measure a country's institutional arrangements against benchmarks of good practices in governance. Governance in this context implies both the capacity to act ("executive capacity") and the extent to which non-governmental actors and institutions are endowed with the participatory competence to hold the government accountable to its actions ("executive accountability"). This includes citizens, legislatures, parties, associations and the media, that is, actors that monitor the government's activities and whose effective inclusion in the political process improve the quality of governance.

The dimension of Executive Capacity draws on the categories of steering capability, policy implementation and institutional learning. Steering capability questions explore the roles of strategic planning and expert advice, the effectiveness of interministerial coordination and regulatory impact assessments, and the quality of consultation and communication policies. Questions about implementation assess the government's ability to ensure effective and efficient task delegation to ministers, agencies or subnational governments. Questions on institutional learning refer to a government's ability to reform its own institutional arrangements and improve its strategic orientation.

The dimension of Executive Accountability is comprised of three categories corresponding to actors or groups of actors considered to be important agents of oversight and accountability in theories of democracy and governance. The questions here are designed to examine the extent to which citizens are informed of government policies, whether the legislature is capable of evaluating and acting as a "check" on the executive branch, and whether intermediary organizations (i.e., media, parties, interest associations) demonstrate relevance and policy know-how in exercising oversight. This approach is based on a dynamic understanding of governance in which power and authority is

dispersed throughout the institutions, processes and structures of government. In order to account for the diversity of institutional arrangements, the index explicitly considers functional equivalencies in different countries, and pays equal attention to formal and informal as well as hierarchical and non-hierarchical institutional arrangements.

4.92.14 Policy Performance

QoG Code: `sgi_pp`

This pillar of the SGI examines each country's policy performance in terms of three dimensions of sustainable development. If the goal of politics is to promote sustainable development, and if citizens are to be empowered to live their lives in accordance with their own individual talents, then governments must be able to establish and maintain the social, economic and environmental conditions for such well-being and empowerment. The conditions for social progress must be generated by suitable outcomes in certain policy fields. Such outcomes are examined by the Policy Performance pillar, which is comprised of 16 policy fields grouped in terms of economic, social and environmental sustainability. Each policy field is addressed by a qualitative assessment and additional quantitative data. The point here is to examine domestic policymaking as well as the extent to which governments actively contribute to the provision of global public goods. The areas examined are:

1. Economic Policies: economy, labor markets, taxes, budgets, research and innovation, global financial system.
2. Social Policies: education, social inclusion, health, families, pensions, integration policy, safe living conditions, global inequalities.
3. Environmental Policies: environment policy, global environmental protection.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.92.15 Robust Democracy

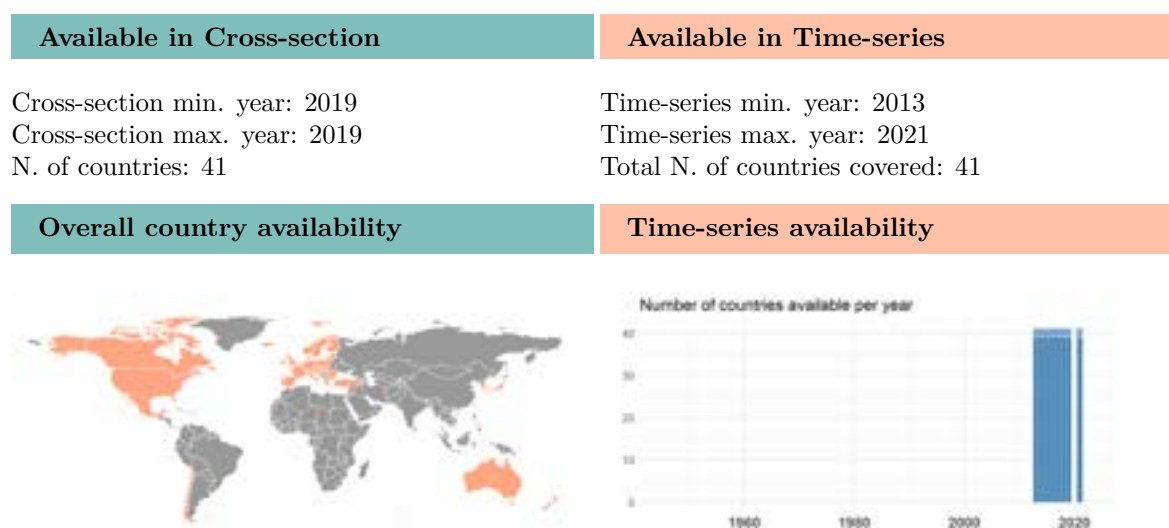

QoG Code: `sgi_qd`

This pillar of the SGI examines the quality of democracy in each country. From the perspective of long-term system stability and political performance, the quality of democracy and political par-

ticipation are crucial aspects of a society's success. The stability and performance of a political system depends in large part upon the assent and confidence of its citizens. Democratic participation and oversight are also essential to genuine learning and adaptation processes, and to the ability to change. In this sense, guaranteeing opportunities for democratic participation and oversight, as well as the presence of due process and respect for civil rights, are fundamental prerequisites for the legitimacy of a political system. The quality of democracy in each country is measured against a definitional norm that considers issues relating to participation rights, electoral competition, access to information and the rule of law. Given that all OECD and EU member states constitute democracies, the questions posed here focus on the quality rather than the presence of democracy. Individual indicators monitor the following criteria:

1. Electoral processes.
2. Access to information.
3. Civil rights and political liberties.
4. Rule of law.

Type of variable: Continuous

4.92.20 Robust Democracy: Rule of Law - Corruption Prevention

QoG Code: `sgi_qdrlc`

Robust Democracy: Rule of Law - Corruption Prevention. To what extent are public officeholders prevented from abusing their position for private interests? This question addresses how the state and society prevent public servants and politicians from accepting bribes by applying mechanisms to guarantee the integrity of officeholders: auditing of state spending; regulation of party financing; citizen and media access to information; accountability of officeholders (asset declarations, conflict of interest rules, codes of conduct); transparent public procurement systems; effective prosecution of corruption. (1, 2): Public officeholders can exploit their offices for private gain as they see fit without fear of legal consequences or adverse publicity. (3, 4, 5): Some integrity mechanisms function, but do not effectively prevent public officeholders from abusing their positions. (6, 7, 8): Most integrity mechanisms function effectively and provide disincentives for public officeholders willing to abuse their positions. (9, 10): Legal, political and public integrity mechanisms effectively prevent public officeholders from abusing their positions.

4.94 The Authoritarian Regime Dataset

Dataset by: Wahman, Teorell and Hadenius

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Wahman, M., Teorell, J., & Hadenius, A. (2013). Authoritarian regime types revisited: Updated data in comparative perspective. *Contemporary Politics*, 19(1), 19–34

Teorell, J., & Wahman, M. (2018). Institutional stepping stones for democracy: How and why multipartyism enhances democratic change. *Democratization*, 25(1), 78–97

Hadenius, A., & Teorell, J. (2007). Pathways from authoritarianism. *Journal of Democracy*, 18(1), 143–157

Dataset found at: <https://sites.google.com/site/authoritarianregimedataset/data>

Last update by original source: 2017-08-10

Date of download: 2022-09-05

The Authoritarian Regimes Dataset version 6.0 covers the time period 1972-2014 and includes all 192 nations recognized as members of the UN except the four micro states of Europe (Andorra, Liechtenstein, Monaco and San Marino) and two micro states in the Pacific that are not members of the World Bank (Nauru and Tuvalu).

The variables for "Colonial Origin" and "Region" were updated until 2014 by the original authors. QoG imputes this information until 2021.

4.94.1 Colonial Origin

QoG Code: ht_colonial

This is a tenfold classification of the former colonial ruler of the country. Following Bernard et al. (2004), we have excluded the British settler colonies (the US, Canada, Australia, Israel and New Zealand), and exclusively focused on "Western overseas" colonialism. This implies that only Western colonizers (e.g. excluding Japanese colonialism), and only countries located in the non-Western hemisphere "overseas" (e.g. excluding Ireland & Malta), have been coded. Each country that has been colonized since 1700 is coded. In cases of several colonial powers, the last one is counted, if it lasted for 10 years or longer. The categories are the following:

0. Never colonized by a Western overseas colonial power
1. Dutch
2. Spanish
3. Italian
4. US
5. British
6. French

7. Portuguese
8. Belgian
9. British-French
10. Australian

Type of variable: Categorical

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 194	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 211
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.94.2 Level of Democracy (Freedom House/Imputed Polity)

QoG Code: ht_ipolity2

Imputed average Polity [original variable revpol2] & Freedom House [original variable fhadd] scores (scaled 010), where missing values have been imputed by regressing the fhpol index on the Freedom House scores [original variable fhadd], which have better country coverage than Polity2 Countries with an ifhpol score larger than 7.0 are coded as democracies.

This variable replaces the variable previously called fh_ipolity2.

Type of variable: Continuous

Available in Time-series
Time-series min. year: 1972 Time-series max. year: 2014 Total N. of countries covered: 200

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.94.3 Size of Largest Party in Legislature (in Fractions)

QoG Code: ht_partsz

Counts the largest parties' number of seats divided by the legislative assemblies' total number of seats expressed in fractions. In countries with a two-chamber parliament the lower house is counted.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 1974

Time-series max. year: 2013

Total N. of countries covered: 184

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.94.4 The Region of the Country

QoG Code: ht_region

This is a tenfold politico-geographic classification of world regions, based on a mixture of two considerations: geographical proximity (with the partial exception of category 5 below) and demarcation by area specialists having contributed to a regional understanding of democratization. The categories are as follow:

1. Eastern Europe and post Soviet Union (including Central Asia)
2. Latin America (including Cuba, Haiti & the Dominican Republic)
3. North Africa & the Middle East (including Israel, Turkey & Cyprus)
4. Sub-Saharan Africa
5. Western Europe and North America (including Australia & New Zealand)
6. East Asia (including Japan & Mongolia)
7. South-East Asia
8. South Asia
9. The Pacific (excluding Australia & New Zealand)
10. The Caribbean (including Belize, Guyana & Suriname, but excluding Cuba, Haiti & the Dominican Republic)

Type of variable: Categorical

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 194	Time-series min. year: 1946 Time-series max. year: 2022 Total N. of countries covered: 211

[Find more information about this variable in the QoG Data Finder](#)

4.94.5 Regime Type

QoG Code: ht_regtype

This typology of authoritarian regimes is based on a distinction between three modes of political power maintenance (probably the three most widely used throughout history): hereditary succession (lineage), corresponding to monarchies; the actual or threatened use of military force, corresponding to military regimes; and popular elections, designating electoral regimes. Among the latter we distinguish among no-party regimes (where all parties are prohibited), one-party regimes (where all but one party is prohibited), and limited multiparty regimes (where multiple parties are allowed but the system still does not pass as democratic); a subtype of these regimes where no parties are present, although not being prohibited, are coded as "partyless" regimes. A subtype of military regimes are coded "rebel regimes", where a rebel movement has taken power by military means. We also code hybrids (or amalgams) combining elements from more than one regime type, as well as several minor types of regimes: "theocracies", "transitional" regimes, "civil war", foreign "occupation", and a residual "other" category. Using the mean of the Freedom House and Polity scales (fh_ipolity2), the line between democracies and autocracies is drawn at 7.5. This threshold value was chosen by estimating the mean cutoff point separating democracy from autocracy in five well-known categorical measures of democracy: those of Przeworski et al. (2000), Mainwaring et al. (2001), and Reich (2002), together with Freedom House's and Polity's own categorical thresholds for democracy.

1. Limited Multiparty
2. Partyless
3. No-Party
4. Military
5. Military No-Party
6. Military Multiparty
7. Military One-party
8. One-Party
9. Other
16. One-Party Monarchy
17. Monarchy
18. Rebel Regime
19. Civil War
20. Occupation
21. Theocracy
22. Transitional Regime
23. No-Party Monarchy
24. Multiparty Monarchy
25. Multiparty-Occupied
100. Democracy

[Find more information about this variable in the QoG Data Finder](#)

4.94.6 Regime Type (simplified)

QoG Code: ht_regtype1

A simplified, collapsed version of ht_regtype, where all monarchical regimes with amalgams [ht_regtype =16, 17, 23 or 24] are treated as monarchies, all military regimes with sub-types and amalgams [ht_regtype=4, 5, 6, 7 or 18] are treated as military regimes, and multiparty regimes with sub-types are treated as multiparty regimes [ht_regtype=1 or 2]. Only pure noparty [ht_regtype=3] and one-party [ht_regtype=8] regimes are treated as no-party and one-party regimes, respectively. The minor types [ht_regtype=9, 19, 20, 21, 22 or 25] are treated as other.

1. Monarchy
2. Military
3. One party
4. Multi-party
9. No-party
99. Other
100. Democracy

4.95 The Bayesian Corruption Index

Dataset by: Sherppa Ghent University

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Standaert, S. (2015). Divining the level of corruption: A bayesian state-space approach. *Journal of Comparative Economics*, 43(3), 782–803. <https://doi.org/10.1016/j.jce.2014.05.007>

Dataset found at: <http://users.ugent.be/~sastanda/BCI/BCI.html>

Last update by original source: 2018-09-26

Date of download: 2022-09-01

The Bayesian Corruption Index is a composite index of the perceived overall level of corruption: with corruption referred to as the "abuse of public power for private gain". Perceived corruption: Given the hidden nature of corruption, direct measures are hard to come by, or inherently flawed (e.g. the number of corruption convictions). Instead, we amalgamate the opinion on the level of corruption from inhabitants of the country, companies operating there, NGOs, and officials working both in governmental and supra-governmental organizations. Composite: it combines the information of 20 different surveys and more than 80 different survey questions that cover the perceived level of corruption.

It is an alternative to the other well-known indicators of corruption perception: the Corruption Perception Index (CPI) published by Transparency International and the Worldwide Governance Indicators (WGI) published by the World Bank. Methodologically, it is most closely related to the latter as the methodology used in the construction of the BCI can be seen as an augmented version of the Worldwide Governance Indicators' methodology.

The augmentation allows an increase of the coverage of the BCI: a 60% to 100% increase relative to the WGI and CPI, respectively. In addition, in contrast to the WGI or CPI, the underlying source data are entered without any ex-ante imputations, averaging or other manipulations. This results in an index that truly represents the underlying data, unbiased by any modeling choices of the composer.

4.95.1 The Bayesian Corruption Indicator

QoG Code: `bci_bci`

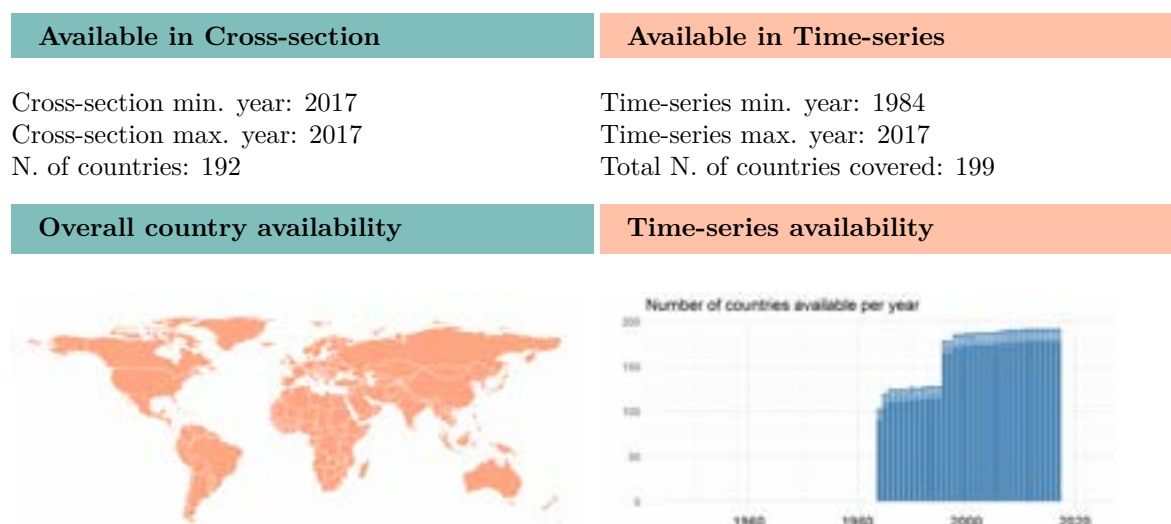

The BCI index values lie between 0 and 100, with an increase in the index corresponding to a raise in the level of corruption. This is a first difference with CPI and WGI where an increase means that the level of corruption has decreased.

There exists no objective scale on which to measure the perception of corruption and the exact scaling you use is to a large extent arbitrary. However, we were able to give the index an absolute scale: zero corresponds to a situation where all surveys say that there is absolutely no corruption. On the other hand, when the index is one, all surveys say that corruption is as bad as it gets according to their scale. This is another difference with CPI and WGI, where the scaling is relative. They are rescaled such that WGI has mean 0 and a standard deviation of 1 in each year, while CPI always lies between 0 and 100.

In contrast, the actual range of values of the BCI will change in each year, depending how close countries come to the situation where everyone agrees there is no corruption at all (0), or that corruption is as bad as it can get (100).

The absolute scale of the BCI index was obtained by rescaling all the individual survey data such that zero corresponds to the lowest possible level of corruption and 1 to the highest one. We subsequently rescaled the BCI index such that when all underlying indicators are zero (one), the expected value of the BCI index is zero (hundred).

Type of variable: Continuous

4.96 The CIRIGHTS Data project

Dataset by: Cingranelli, David L., David L. Richards, and K. Chad Clay

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Cingranelli, D. L., Filippov, M., & Mark, S. (2019). The CIRIGHTS dataset [Version 2019.07.21]. *The Binghamton University Human Right Institute*. www.binghamton.edu/institutes/hri

Cingranelli, D. L., Richards, D. L., & Clay, K. C. (2014). The CIRI Human Rights Dataset [Version 2014.04.14]. *CIRI Human Rights Data Project, 6*

Dataset found at: <https://dataverse.harvard.edu/dataverse/cirihumanrightsdata>

Last update by original source: 2014-04-14

Date of download: 2022-08-29

The CIRI Human Rights Dataset contains standards-based quantitative information on government respect for 15 internationally recognized human rights for 202 countries, annually from 1981-2011. It is designed for use by scholars and students who seek to test theories about the causes and consequences of human rights violations, as well as policy makers and analysts who seek to estimate the human rights effects of a wide variety of institutional changes and public policies including democratization, economic aid, military aid, structural adjustment, and humanitarian intervention.

The original dataset contains the last version of the CIRI dataset, along with supporting documentation. The creation of the data and documentation has been supported by the National Science Foundation under Grant Nos. SES-0318273 (2004-2006), SES-0647969 (2007-2010), and SES-0647916 (2007-2010). (2014-04-14)

Note: The three different missing codes -66 (country is occupied by foreign powers), -77 (complete collapse of central authority), -999 (missing) have all been coded as missing.

4.96.1 Freedom of Assembly and Association

QoG Code: `ciri_assn`

It is an internationally recognized right of citizens to assemble freely and to associate with other persons in political parties, trade unions, cultural organizations, or other special-interest groups. This variable indicates the extent to which the freedoms of assembly and association are subject to actual governmental limitations or restrictions (as opposed to strictly legal protections). A score of 0 indicates that citizens' rights to freedom of assembly or association were severely restricted or denied completely to all citizens; a score of 1 indicates that these rights were limited for all citizens or severely restricted or denied for select groups; and a score of 2 indicates that these rights were virtually unrestricted and freely enjoyed by practically all citizens in a given year.

Type of variable: Categorical

Available in Time-series

[Find more information about this variable in the QoG Data Finder](#)

4.96.2 Disappearance

QoG Code: `ciri_disap`

Disappearances are cases in which people have disappeared, political motivation appears likely, and the victims have not been found. Knowledge of the whereabouts of the disappeared is, by definition, not public knowledge. However, while there is typically no way of knowing where victims are, it is typically known by whom they were taken and under what circumstances. A score of 0 indicates that disappearances have occurred frequently in a given year; a score of 1 indicates that disappearances occasionally occurred; and a score of 2 indicates that disappearances did not occur in a given year.

4.96.4 Electoral Self-Determination

QoG Code: `ciri_elecsd`

This variable indicates to what extent citizens enjoy freedom of political choice and the legal right and ability in practice to change the laws and officials that govern them through free and fair elections. This right is sometimes known as the right to self-determination. A score of 0 indicates that the right to self-determination through free and fair elections did not exist in law or practice during the year in question. A score of 1 indicates that while citizens had the legal right to self-determination, there were some limitations to the fulfillment of this right in practice. Therefore, in states receiving a 1, political participation was only moderately free and open. A score of 2 indicates that political participation was very free and open during the year in question and citizens had the right to self-determination through free and fair elections in both law and practice.

4.96.14 Women's Economic Rights

QoG Code: ciri_wecon

Women's economic rights include a number of internationally recognized rights. These rights include:

- Equal pay for equal work,
- Free choice of profession or employment without the need to obtain a husband or male relative's consent,
- The right to gainful employment without the need to obtain a husband or male relative's consent,
- Equality in hiring and promotion practices,
- Job security (maternity leave, unemployment benefits, no arbitrary firing or layoffs, etc.),

Non-discrimination by employers,

- The right to be free from sexual harassment in the workplace,
- The right to work at night,
- The right to work in occupations classified as dangerous,
- The right to work in the military and the police force.

A score of 0 indicates that there were no economic rights for women in law and that systematic discrimination based on sex may have been built into law. A score of 1 indicates that women had some economic rights under law, but these rights were not effectively enforced. A score of 2 indicates that women had some economic rights under law, and the government effectively enforced these rights in practice while still allowing a low level of discrimination against women in economic matters. Finally, a score of 3 indicates that all or nearly all of women's economic rights were guaranteed by law and the government fully and vigorously enforces these laws in practice.

4.96.17 Women's Social Rights

QoG Code: `ciri_wosoc`

Women's social rights include a number of internationally recognized rights. These rights include:

- The right to equal inheritance
- The right to enter into marriage on a basis of equality with men
- The right to travel abroad
- The right to obtain a passport
- The right to confer citizenship to children or a husband
- The right to initiate a divorce

- The right to own, acquire, manage, and retain property brought into marriage
- The right to participate in social, cultural, and community activities
- The right to an education
- The freedom to choose a residence/domicile
- Freedom from female genital mutilation of children and of adults without their consent
- Freedom from forced sterilization.

A score of 0 indicates that there were no social rights for women in law and that systematic discrimination based on sex may have been built into law. A score of 1 indicates that women had some social rights under law, but these rights were not effectively enforced. A score of 2 indicates that women had some social rights under law and the government effectively enforced these rights in practice while still allowing a low level of discrimination against women in social matters. Finally, a score of 3 indicates that all or nearly all of women's social rights were guaranteed by law and the government fully and vigorously enforced these laws in practice. 4.97 The Comparative Abortion Index Project

Dataset by: Forman-Rabinovici and Sommer

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Forman–Rabinovici, A., & Sommer, U. (2018). Reproductive health policymakers: Comparing the influences of international and domestic institutions on abortion policy. *Public Administration*, 96(1), 185–199

Dataset found at: <https://people.socsci.tau.ac.il/mu/udis/the-comparative-abortion-index-project/>

Last update by original source: 2019-05-11

Date of download: 2020-09-04

The comparative abortion index quantifies the permissiveness of abortion policies worldwide, accounting for a variety of considerations. It aims to provide researchers with a tool to assess trends in worldwide reproductive rights, and to study how these changes over time and space occur. It is unique in its breadth and its method. Not only does it include a scale that reflects the number of criteria accepted as grounds for abortion, but it includes a second scale which gives weighted scores to each criterion, based on how common it is. These data are relevant for anyone interested in tracking trends in women’s rights, public health policy, and reproductive rights policy over time.

The dataset covers 192 countries from 1992-2015. The UN Department of Social and Economic Affairs has published a global review of abortion policy since 1992. For this database, all reviews published between 1992 and 2015 were collected. The report offers seven criteria under which state law may allow access to abortion services; saving a woman’s life, preserving a woman’s physical health, preserving a woman’s mental health, in case of rape or incest, in case of fetal impairment, for social or economic reasons and on request.

Each country-year is given a score based on the number of legal criteria accepted as grounds for abortion. In the first version of the index (CAI1), each criterion is given equal weight and the score is a direct reflection of the number of conditions the country accepts. Thus, a country that has no conditions under which a woman can receive an abortion gets a score of 0. A country, in which a woman may access an abortion under all conditions including on request, receives a score of 7.

For the purposes of robustness, and to fix a potential measurement flaw in the first index, we also offer a weighted index (CAI2). The first scale does not account for the different degrees of acceptance that each criterion represents. It would be imprecise, for instance, to suggest that the criterion of saving a woman’s life is equivalent to (and thus carries the same weight as) allowing abortion on demand. The more permissive the criterion, the less likely that it is universally accepted. Accordingly, the weight of each criterion (W_i) will be determined based on the percentage (P_i) of countries that allow that condition. In the weighted index, countries are given a score on a scale of 0 to 1, where 0 represents countries in which there are no conditions for legal abortion, and 1 represents a country that accepts all criteria for abortion, including on request.

4.97.1 Comparative Abortion Index 1 (0 to 7)

QoG Code: cai_cai1

The scale quantifies grounds on which a country might grant legal access to abortion: saving a woman’s life, preserving a woman’s physical health, preserving a woman’s mental health, in case of

rape or incest, in case of fetal impairment, for social or economic reasons, and on request. 0 represents a country with a complete ban on abortions. 7 represents a country that allows abortions on request.

Type of variable: Discrete

Available in Time-series

Time-series min. year: 1992

Time-series max. year: 2015

Total N. of countries covered: 194

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.97.2 Comparative Abortion Index 2 (0 to 1)

QoG Code: cai_cai2

Using the 7 grounds for legal abortion, the weight of each grounds (W_i) will be determined based on the percentage (P_i) of countries that allow it. In the weighted index, countries are given a score on a scale of 0-1, where 0 represents countries in which there are no conditions for legal abortion, and 1 represents a country that accepts all criteria for abortion, including on request. The need for a weighted scale is as follows: It would be imprecise, for instance, to suggest that the criterion of saving a woman's life is equivalent to (and thus carries the same weight as) allowing abortion on demand. The more permissive the criterion, the less likely that it is universally accepted. Thus, the scale accounts for the different degrees of acceptance that each criterion represents.

4.98 The GenDip database on Gender and Diplomatic Representation

Dataset by: GenDip: Gender in Diplomacy

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Niklasson, B., & Towns, A. E. (2022). The gendip dataset on gender and diplomatic representation, version june21

Dataset found at: <https://www.gu.se/en/gendip>

Last update by original source: 2021-06-01

Date of download: 2022-08-02

The purpose of this dataset is to provide information on the gender of diplomats around the world, data that has so far been missing from existing datasets on diplomatic exchanges (Bayer 2006; Rhamey et al. 2013; Moyer et al. 2020).

For this dataset, only countries with at least 75% information on the gender of the diplomats is used.

The hope of the researchers is thus that the GenDip dataset will supply the fields of international politics and gender and politics including the exciting and fast-growing research field on gender in diplomacy with a foundation to be explored and developed in the quest to improve theories of diplomatic exchanges as well as of gender representation.

4.98.1 Women ambassadors received to all postings (main and side accreditations)

4.99 The Gender Inequality Index

Dataset by: United Nations Development Programme

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

United Nations Development Program. (2022a). Gender inequality index. <http://hdr.undp.org/en/content/gender-inequality-index-gii>

United Nations Development Program. (2022b). Human development report 2021/2022. <https://hdr.undp.org/content/human-development-report-2021-22>

Dataset found at: <https://hdr.undp.org/data-center/thematic-composite-indices/gender-inequality-index#/indicies/GII>

Last update by original source: 2020-09-22

Date of download: 2022-11-16

The Gender Inequality Index (GII) reflects gender-based disadvantage in three dimensions - reproductive health, empowerment and the labour market - for as many countries as data of reasonable quality allow. It shows the loss in potential human development due to inequality between female and male achievements in these dimensions. It ranges from 0, where women and men fare equally, to 1, where one gender fares as poorly as possible in all measured dimensions.

4.99.1 Gender Inequality Index

QoG Code: `gii_gii`

The GII is an inequality index (0 to 1 higher disparity). It measures gender inequalities in three important aspects of human development-reproductive health, measured by maternal mortality ratio and adolescent birth rates; empowerment, measured by proportion of parliamentary seats occupied by females and proportion of adult females and males aged 25 years and older with at least some secondary education; and economic status, expressed as labour market participation and measured by labour force participation rate of female and male populations aged 15 years and older. The GII is built on the same framework as the IHDI-to better expose differences in the distribution of achievements between women and men. It measures the human development costs of gender inequality. Thus the higher the GII value the more disparities between females and males and the more loss to human development.

Dataset found at: <https://www.weforum.org/reports/global-gender-gap-report-2022/>

Last update by original source: 2022-07-13

Date of download: 2023-01-26

The Global Gender Gap Report benchmarks 153 countries on their progress towards gender parity across four thematic dimensions: Economic Participation and Opportunity, Educational Attainment, Health and Survival, and Political Empowerment.

4.100.1 Global Gender Gap Educational Attainment Subindex

QoG Code: gggi_eas

Educational Attainment (0 to 1, where 1 indicates no gap). This subindex captures the gap between womens and mens current access to education through ratios of women to men in primary-, secondary- and tertiary-level education. A longer-term view of the countrys ability to educate women and men in equal numbers is captured through the ratio of the female literacy rate to the male literacy rate.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2018
Cross-section max. year: 2021
N. of countries: 157

Available in Time-series

Time-series min. year: 2006

[Find more information about this variable in the QoG Data Finder](#)

4.100.3 Global Gender Gap Health and Survival Subindex

QoG Code: gggi_hss

Health and Survival (0 to 1, where 1 indicates no gap). This subindex provides an overview of the differences between women's and men's health through the use of two indicators. The first is the sex ratio at birth, which aims specifically to capture the phenomenon of missing women, prevalent in many countries with a strong son preference. Second, we use the gap between women's and men's healthy life expectancy. This measure provides an estimate of the number of years that women and men can expect to live in good health by taking into account the years lost to violence, disease, malnutrition and other relevant factors.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.100.4 Global Gender Gap Political Empowerment Subindex

QoG Code: gggi_pes

Political Empowerment (0 to 1, where 1 indicates no gap). This subindex measures the gap between men and women at the highest level of political decision-making through the ratio of women to men in ministerial positions and the ratio of women to men in parliamentary positions. In addition, we've included the ratio of women to men in terms of years in executive office (prime minister or president) for the last 50 years. A clear drawback in this category is the absence of any indicators capturing differences between the participation of women and men at local levels of government. Should such data become available at a globally comparative level in future years, it will be considered for inclusion in the Index.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2021 N. of countries: 157	Time-series min. year: 2006 Time-series max. year: 2021 Total N. of countries covered: 159
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.100.5 Global Gender Gap Economic Participation and Opportunity Subindex

QoG Code: gggi_pos

Economic Participation and Opportunity (0 to 1, where 1 indicates no gap). This subindex contains three concepts: the participation gap, the remuneration gap and the advancement gap. The participation gap is captured using the difference between women and men in labour force participation rates. The remuneration gap is captured through a hard data indicator (ratio of estimated female-to-male earned income) and a qualitative indicator gathered through the World Economic Forum's annual Executive Opinion Survey (wage equality for similar work). Finally, the gap between the advancement of women and men is captured through two hard data statistics (the ratio of women to men among legislators, senior officials and managers, and the ratio of women to men among technical and professional workers).

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2021 N. of countries: 157	Time-series min. year: 2006 Time-series max. year: 2021 Total N. of countries covered: 159

4.101 The International Country Risk Guide (ICRG)

Dataset by: International Country Risk Guide - The PRS Group

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

The PRS Group et al. (2023). International country risk guide

Dataset found at: <https://www.prsgroup.com/explore-our-products/icrg/>

Last update by original source: 2023-02-01

Date of download: 2023-02-01

Now covering 141 developed, emerging, frontier countries and offshore financial centers, ICRG presents monthly political, economic, financial and composite risk ratings and forecasts.

From risks presented by government instability, the threat of asset expropriation, transfer and payment delays, to forms of internal conflict, terrorism, and corruption, ICRG has been labelled 'a vital source for managing and advising investment funds that focus on volatile countries, both emerging and developed.'

4.101.1 ICRG Indicator of Quality of Government

QoG Code: `icrg_qog`

The mean value of the ICRG variables 'Corruption', 'Law and Order' and 'Bureaucracy Quality', scaled from 0 to 1. Higher values indicate higher quality of government.

Corruption:

This is an assessment of corruption within the political system. Such corruption is a threat to foreign investment for several reasons: it distorts the economic and financial environment; it reduces the efficiency of government and business by enabling people to assume positions of power through patronage rather than ability; and, last but not least, it introduces an inherent instability into the political process. The most common form of corruption met directly by business is financial corruption in the form of demands for special payments and bribes connected with import and export licenses, exchange controls, tax assessments, police protection, or loans. Such corruption can make it difficult to conduct business effectively, and in some cases may force the withdrawal or withholding of an investment. Although the measure takes such corruption into account, it is more concerned with actual or potential corruption in the form of excessive patronage, nepotism, job reservations, 'favor-for-favors', secret party funding, and suspiciously close ties between politics and business. According to ICRG, these insidious sorts of corruption are potentially of much greater risk to foreign business in that they can lead to popular discontent, unrealistic and inefficient controls on the state economy, and encourage the development of the black market. The greatest risk in such corruption is that at some time it will become so overweening, or some major scandal will be suddenly revealed, so as to provoke a popular backlash, resulting in a fall or overthrow of the government, a major reorganizing or restructuring of the country's political institutions, or, at worst, a breakdown in law and order, rendering the country ungovernable.

Law and order:

Law and Order are assessed separately, with each sub-component comprising zero to three points. The Law sub-component is an assessment of the strength and impartiality of the legal system, while

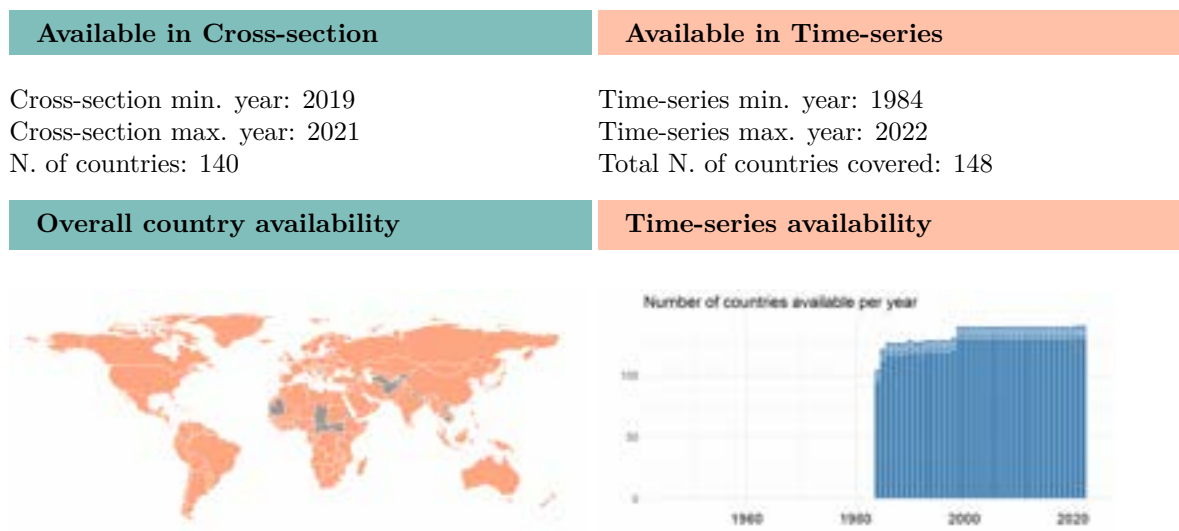

the Order sub-component is an assessment of popular observance of the law. Thus, a country can enjoy a high rating in terms of its judicial system, but a low rating if it suffers from a very high crime rate or if the law is routinely ignored without effective sanction (for example, widespread illegal strikes).

Bureaucracy Quality:

The institutional strength and quality of the bureaucracy is another shock absorber that tends to minimize revisions of policy when governments change. Therefore, high points are given to countries where the bureaucracy has the strength and expertise to govern without drastic changes in policy or interruptions in government services. In these low-risk countries, the bureaucracy tends to be somewhat autonomous from political pressure and to have an established mechanism for recruitment and training. Countries that lack the cushioning effect of a strong bureaucracy receive low points because a change in government tends to be traumatic in terms of policy formulation and day-to-day administrative functions.

Dataset found at: <http://www.oceanhealthindex.org>

Last update by original source: 2022-12-06

Date of download: 2022-12-09

The Ocean Health Index is a valuable tool for the ongoing assessment of ocean health. By providing a means to advance comprehensive ocean policy and compare future progress, the Index can inform decisions about how to use or protect marine ecosystems.

The Index is a collaborative effort, made possible through contributions from more than 65 scientists/ocean experts and partnerships between organizations including the National Center for Ecological Analysis and Synthesis, Sea Around Us, Conservation International, National Geographic, and the New England Aquarium.

The Index assesses the ocean based on 10 widely-held public goals for a healthy ocean. They are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Sense of Place, Coastal Livelihoods & Economies, Tourism & Recreation, Clean Waters, Biodiversity.

Please note that every year the OHI team improve the Ocean Health Index by incorporating new data, knowledge, and feedback. In order to make scores comparable among years, they recalculate previous years results using the most recent methods and data.

4.102.1 The Ocean Health Index

QoG Code: ohi_ohi

The Ocean Health Index establishes reference points for achieving ten widely accepted socio-ecological objectives and scores the oceans adjacent to 171 countries and territories on how successfully they deliver these goals. Evaluated globally and by country, these ten public goals represent the wide range of benefits that a healthy ocean can provide; each country's overall score is the average of its respective goal scores. The ten socio-ecological objectives are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Coastal Livelihoods & Economies, Tourism & Recreation, Sense of Place, Clean Waters, Biodiversity. The index varies from 0 to 100.

4.103 The Political Terror Scale

Dataset by: Gibney, Cornett and Wood

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Gibney, M., Cornett, L., Wood, R., Haschke, P., Arnon, D., Pisanò, A., Barrett, G., & Park, B. (2020). The political terror scale 1976-2019 [Data retrieved from the Political Terror Scale website]. <http://www.politicalterrorsscale.org>

Dataset found at: <http://www.politicalterrorsscale.org/Data/Download.html>

Last update by original source: 2022-08-24

Date of download: 2022-08-31

The PTS seeks to measure political terror. The authors define political terror as violations of basic human rights to the physical integrity of the person by agents of the state within the territorial boundaries of the state in question. It is important to note that political terror as defined by the PTS is not synonymous with terrorism or the use of violence and intimidation in pursuit of political aims. The concept is also distinguishable from terrorism as a tactic or from criminal acts.

The PTS measures levels of political violence and terror that a country experiences in a particular year based on a 5-level "terror scale" originally developed by Freedom House. The data used in compiling this index comes from three different sources: the yearly country reports of Amnesty International, the U.S. State Department Country Reports on Human Rights Practices, and Human Rights Watch's World Reports.

4.103.1 Political Terror Scale - Amnesty International

QoG Code: gd_ptsa

Political Terror Scale Levels from the yearly country reports of Amnesty International:

1. Countries under a secure rule of law, people are not imprisoned for their view, and torture is rare or exceptional. Political murders are extremely rare.
2. There is a limited amount of imprisonment for nonviolent political activity. However, few persons are affected, torture and beatings are exceptional. Political murder is rare.
3. There is extensive political imprisonment, or a recent history of such imprisonment. Execution or other political murders and brutality may be common. Unlimited detention, with or without a trial, for political views is accepted.
4. Civil and political rights violations have expanded to large numbers of the population. Murders, disappearances, and torture are a common part of life. In spite of its generality, on this level terror affects those who interest themselves in politics or ideas.
5. Terror has expanded to the whole population. The leaders of these societies place no limits on the means or thoroughness with which they pursue personal or ideological goals.

4.104 The Property Rights Protection Index

Dataset by: Ouattara and Standaert

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Ouattara, B., & Standaert, S. (2020). Property rights revisited. *European Journal of Political Economy*, 64, 101895. <https://doi.org/https://doi.org/10.1016/j.ejpoleco.2020.101895>

Dataset found at: <https://users.ugent.be/~sastanda/Data.html>

Last update by original source: 2020-07-01

Date of download: 2022-08-15

Over the last two decades, numerous studies have tried to quantify the effect of property rights on a wide range of societal outcomes, including growth, trade, and, to a lesser extent, inequality. However, a major limitation of these studies has been the data measuring property rights. These suffer from a number of shortcomings, including a lack of availability, focus, and objectivity.

Ouattara and Standaert address this gap by composing a new index of property rights that strictly focuses on the protection of these rights. As is common with indicators of governance, there is little to no objective data available that can be used to directly compare the security of property rights across countries. Instead, perception-based indicators such as survey-data or expert assessments are used to capture the opinion of a range of actors. The researchers' approach is to combine a data set of 18 such indicators from 7 different sources. The selection of an indicator depends on whether it directly measures the degree to which a country's laws protect private property rights and the degree to which its government enforces those laws, including the probability that private property is expropriated. By focusing on property rights alone, this allows the researchers to disentangle its effect from that of the overall quality of the judicial system and other aspects of the institutional framework. This ensures a better match between theoretical models and empirical tests on the effects of property rights.

This is done for as wide a group of countries and as long a time span as possible, increasing the index coverage by as much as 45% compared to other indexes - this index covers 191 countries cross twenty-year period between 1994 - 2014.

4.104.1 The Property Right Protection Index

QoG Code: prp_prp

The Property Rights Index measures (the perception of) the security of property rights, separately from other aspects of the rule of laws. It combines all publicly available information on the perception of the security of property rights (18 singular indicators of property rights).

Type of variable: Continuous

Available in Time-series

4.105 The Societal Violence Scale

Dataset by: The Political Terror Scale (PTS) project

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Gibney, M., Cornett, L., & Haschke, P. (2021). The societal violence scale [Data retrieved from the Political Terror Scale website]. <http://www.politicalterrorsscale.org/Data/Documentation-SVS.html>

Dataset found at: <http://www.politicalterrorsscale.org/Data/Documentation-SVS.html>

Last update by original source: 2021-10-15

Date of download: 2022-08-31

The Societal Violence Scale seeks to develop measures of societal violence based on annual US State Department's Human Rights reports. The Societal Violence Scale ranks countries on a 5-point scale (from the lowest level of societal violence to the highest) based on three criteria. First, the authors look at the scope: the proportion of society that is victimized. Thus, widespread violence against women (who account for 50 percent of the population) figures more heavily in the final score than widespread abuses against human rights defenders, who represent a very small number. The authors also look at the severity of abuses. For example, evidence that human rights defenders are killed weighs more heavily than beatings of human rights defenders. Likewise, while women are routinely subjected to sexual violence and domestic violence, the addition of other types of violence against women like gang rape, sex trafficking, and/or FGM/C adds to the assessment of severity.

4.105.1 Societal Violence Scale Index

QoG Code: `svs_ind`

The Societal Violence Scale is coded on a 5-point scale where:

- 1 - Societal violence is limited in scope and severity, with relatively few victims and few perpetrators.
- 2 - Societal violence is a problem, affecting a significant number of victims, albeit across few victim categories and of a less severe nature.
- 3 - Societal violence is widespread and serious in nature. It affects a significant number of people across several victim categories.
- 4 - Societal violence is pervasive in scope, severe in nature, assumes a variety of forms and affects a large proportion of the population typically across several victim categories and perpetrators.
- 5 - Societal violence is ubiquitous in scope, egregious in nature and assumes a variety of forms. It affects a large proportion of the population, commonly crossing numerous victim groups and perpetrators.

4.106 The WhoGov Dataset

Dataset by: Nyrup and Bramwell

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Nyrup, J., & Bramwell, S. (2020). Who governs? a new global dataset on members of cabinets. *American Political Science Review*, 114(4), 1366–1374

Dataset found at: <https://politicscentre.nuffield.ox.ac.uk/whogov-dataset/>

Last update by original source: 2022-07-20

Date of download: 2022-09-28

The WhoGov dataset enables researchers to take a new approach to studying governing elites in autocracies and democracies. We provide bibliographic information, such as gender and party affiliation, on cabinet members in July every year in the period 1966-2016 in all countries with a population of more than 400,000 citizens. In total, the dataset contains data on 50,197 cabinet members in 177 countries, adding up to 8,057 country-years. WhoGov makes it possible to answer questions such as; what is the share of female cabinet members globally, which type of regime has the highest cabinet turnover, and have cabinets increased in size over time? and many others. The dataset is highly flexible and can be used to calculate countless variables of interest, including the number of female ministers, ministerial experience, cabinet turnover and cabinet size at the country-year level. The data is based on cabinet compositions in July for all years apart from 1966, where data was only available for September and 1970, where we are using January instead of July. Apart from the cross-sectional dataset that is used for the QoG Compilations, within-country dataset is available in the original source.

4.106.1 Number of years the leader in office continuously

QoG Code: `wgov_leadexp`

The number of years the person has been leader of the country in a row, continuous. Thus, it starts over if the leader is removed. The count starts at 1, when the leader first appear as leader in the dataset. Therefore, the measure is imprecise for leaders, who came to power before 1966.

4.107 The Worldwide Governance Indicators

Dataset by: The World Bank Group

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Kaufmann, D., Kraay, A., & Mastruzzi, M. (2010). The worldwide governance indicators: A summary of methodology, data and analytical issues. *World Bank Policy Research Working Paper*, 5430

Dataset found at: <https://info.worldbank.org/governance/wgi/>

Last update by original source: 2022-09-23

Date of download: 2022-09-27

Governance consists of the traditions and institutions by which authority in a country is exercised. This includes the process by which governments are selected, monitored and replaced; the capacity of the government to effectively formulate and implement sound policies; and the respect of citizens and the state for the institutions that govern economic and social interactions among them.

The Worldwide Governance Indicators report on six broad dimensions of governance for over 200 countries and territories over the period 1996-2021:

- Voice and Accountability
- Political Stability and Absence of Violence/Terrorism
- Government Effectiveness
- Regulatory Quality
- Rule of Law
- Control of Corruption

The Worldwide Governance Indicators (WGI) are a research dataset summarizing the views on the quality of governance provided by a large number of enterprise, citizen and expert survey respondents in industrial and developing countries. These data are gathered from a number of survey institutes, think tanks, non-governmental organizations, international organizations, and private sector firms. The WGI do not reflect the official views of the Natural Resource Governance Institute, the Brookings Institutions, the World Bank, its Executive Directors, or the countries they represent. The WGI are not used by the World Bank Group to allocate resources.

Please note: the 2022 WGI update includes significant revisions to the underlying source data that affect the data for earlier years in the WGI dataset. This means the data has been retroactively adjusted in the dataset. Please go to the [WGI website](<https://info.worldbank.org/governance/wgi/>) to read more about the changes to the dataset.

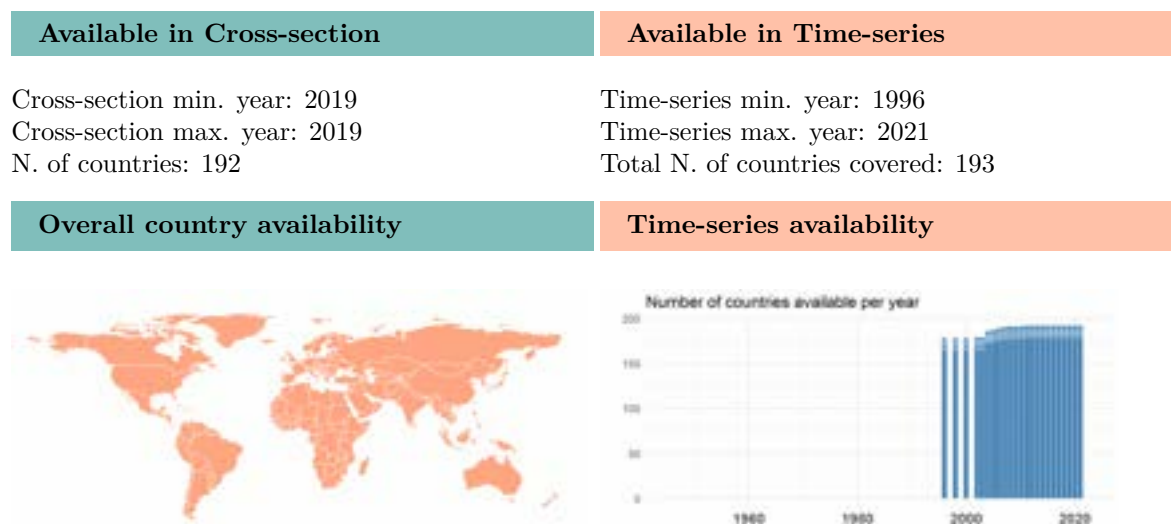

4.107.1 Control of Corruption, Estimate

QoG Code: `wbgi_cce`

Control of Corruption - Estimate: 'Control of Corruption' measures perceptions of corruption, conventionally defined as the exercise of public power for private gain. The particular aspect of corruption

measured by the various sources differs somewhat, ranging from the frequency of 'additional payments to get things done', to the effects of corruption on the business environment, to measuring 'grand corruption' in the political arena or in the tendency of elite forms to engage in 'state capture'.

Type of variable: Continuous

4.107.10 Rule of Law, Estimate

QoG Code: `wbgi_rle`

Rule of Law - Estimate: 'Rule of Law' includes several indicators which measure the extent to which agents have confidence in and abide by the rules of society. These include perceptions of the incidence of crime, the effectiveness and predictability of the judiciary, and the enforceability of contracts. Together, these indicators measure the success of a society in developing an environment in which fair and predictable rules form the basis for economic and social interactions and the extent to which property rights are protected.

The UCDP Dyadic Dataset is a project within the Uppsala Conflict Data Program (UCDP) at the Department of Peace and Conflict Research, Uppsala University. The UCDP Dyadic dataset builds on the UCDP/PRIO Armed Conflict dataset, but goes beyond the conflict level and focuses on dyads within each conflict. As such, it constitutes a disaggregated version of the UCDP/PRIO Armed Conflict dataset.

4.108.1 Extrasystemic armed conflict

QoG Code: `ucdp_type1`

Number of extrasystemic armed conflicts per country in a given year. Extrasystemic armed conflict occurs between a state and a non-state group outside its own territory. (In the COW project, extrasystemic war is subdivided into colonial war and imperial war, but this distinction is not used here.) These conflicts are by definition territorial, since the government side is fighting to retain control of a territory outside the state system.

4.109 UN E-Government Knowledgebase

Dataset by: UN Department of Economic and Social Affairs

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Department of Economic and Social Affairs. (2022). United nations e-government survey. <https://publicadministration.un.org/egovkb/en-us/Reports/UN-E-Government-Survey-2022>

Dataset found at: <https://publicadministration.un.org/egovkb/en-us/Overview>

Last update by original source: 2022-09-28

Date of download: 2022-09-29

The E-Government Development Index presents the state of E-Government Development of the United Nations Member States. Along with an assessment of the website development patterns in a country, the E-Government Development index incorporates the access characteristics, such as the infrastructure and educational levels, to reflect how a country is using information technologies to promote access and inclusion of its people. The EGDI is a composite measure of three important dimensions of e-government, namely: provision of online services, telecommunication connectivity and human capacity.

The EGDI is based on a comprehensive Survey of the online presence of all 193 United Nations Member States, which assesses national websites and how e-government policies and strategies are applied in general and in specific sectors for delivery of essential services. The assessment rates the e-government performance of countries relative to one another as opposed to being an absolute measurement. The results are tabulated and combined with a set of indicators embodying a country's capacity to participate in the information society, without which e-government development efforts are of limited immediate use.

Although the basic model has remained consistent, the precise meaning of these values varies from one edition of the Survey to the next as understanding of the potential of e-government changes and the underlying technology evolves. This is an important distinction because it also implies that it is a comparative framework that seeks to encompass various approaches that may evolve over time instead of advocating a linear path with an absolute goal.

Mathematically, the EGDI is a weighted average of three normalized scores on three most important dimensions of e-government, namely: (1) scope and quality of online services (Online Service Index, OSI), (2) development status of telecommunication infrastructure (Telecommunication Infrastructure Index, TII), and (3) inherent human capital (Human Capital Index, HCI).

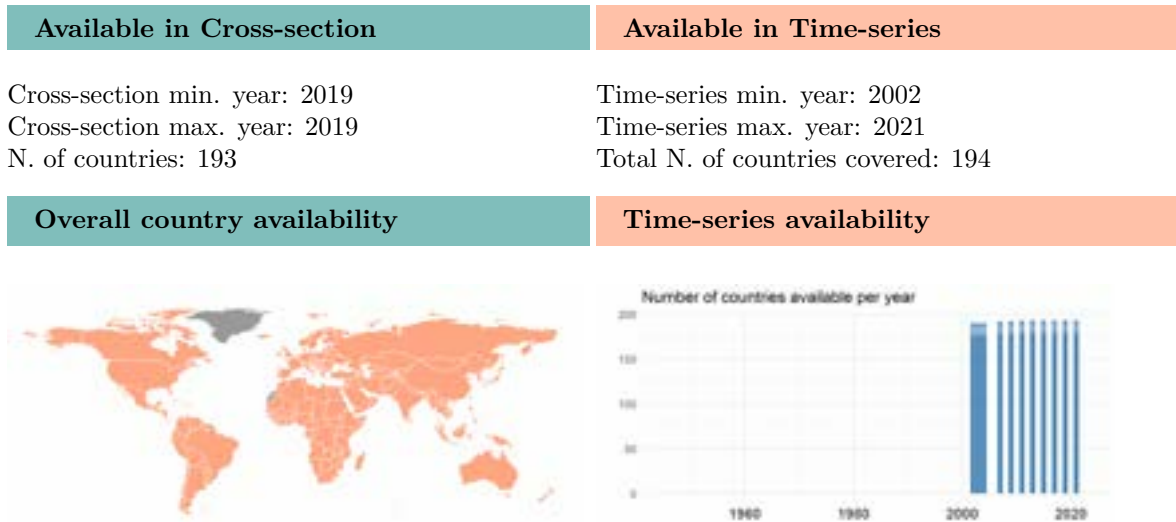

The EGDI is not designed to capture e-government development in an absolute sense; rather, it aims to give a performance rating of national governments relative to one another.

4.109.1 E-Government Index

QoG Code: `egov_egov`

The E-Government Development Index (EGDI) is a weighted average of normalised scores on the three most important dimensions of e-government, namely: scope and quality of online services (Online Service Index, OSI), status of the development of telecommunication infrastructure (Telecommunication Infrastructure Index, TII) and inherent human capital (Human Capital Index, HCI). Each of these sets of indices is in itself a composite measure that can be extracted and analysed independently.

Type of variable: Continuous

4.109.2 E-Participation Index

QoG Code: egov_epar

The E-Participation Index (EPI) is derived as a supplementary index to the UN E-Government Survey. It extends the dimension of the Survey by focusing on the use of online services to facilitate provision of information by governments to citizens (e-information sharing), interaction with stakeholders (e-consultation) and engagement in decision-making processes.

A country's EPI reflects the e-participation mechanisms that are deployed by the government as compared to all other countries. The purpose of this measure is not to prescribe any specific practice, but rather to offer insight into how different countries are using online tools in promoting interaction between the government and its people, as well as among the people, for the benefit of all.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.109.3 Human Capital Index

QoG Code: `egov_hci`

The Human Capital Index (HCI) consists of four components:

- (i) adult literacy rate;
- (ii) the combined primary, secondary and tertiary gross enrolment ratio;
- (iii) expected years of schooling; and
- (iv) average years of schooling.

Data for HCI components was extracted from the UNESCO-UIS source.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 193

Available in Time-series

Time-series min. year: 2002
Time-series max. year: 2021

Time-series availability

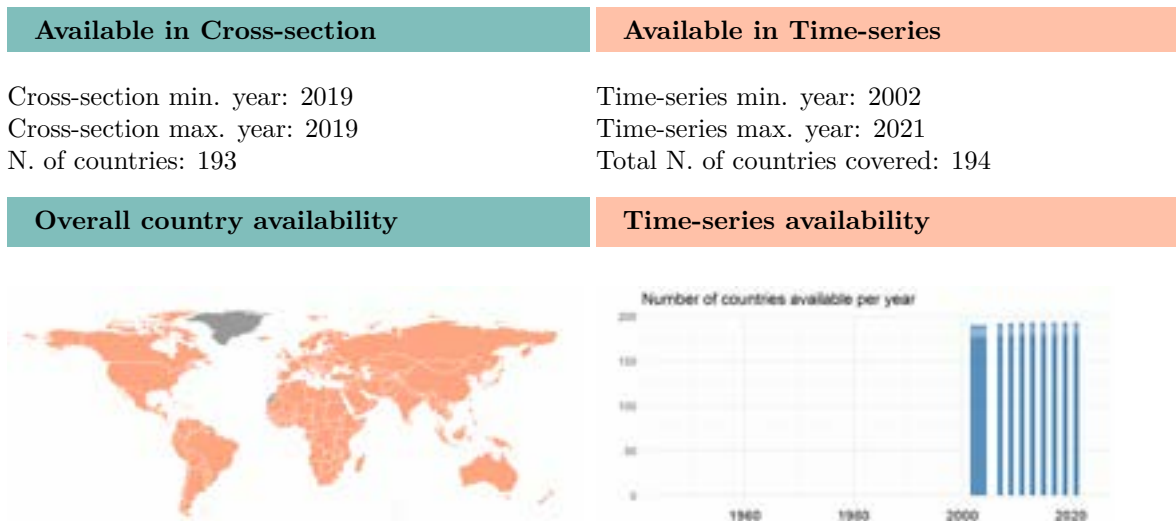

[Find more information about this variable in the QoG Data Finder](#)

4.109.4 Online Service Index

QoG Code: egov_osi

The Online Service Index (OSI) values were constructed by researchers, including UN experts and online United Nations Volunteers (UNVs) from over 60 countries with coverage of 66 languages assessed each country's national website in the native language, including the national portal, e-services portal and e-participation portal, as well as the websites of the related ministries of education, labour, social services, health, finance and environment as applicable. The UNVs included qualified graduate students and volunteers from universities in the field of public administration.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.109.5 Telecommunication Infrastructure Index

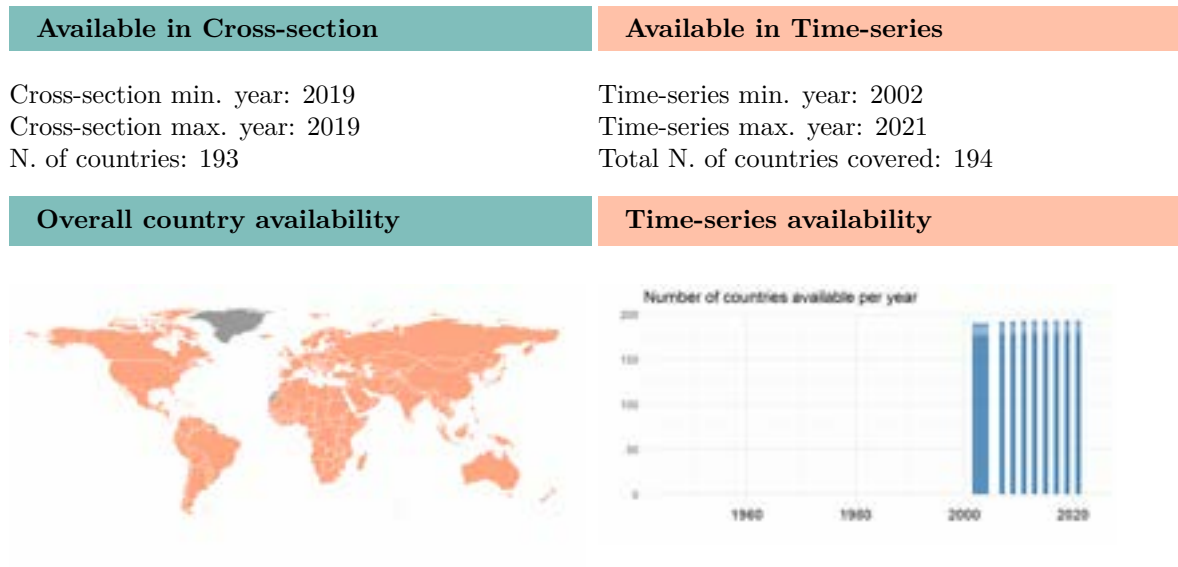

QoG Code: egov_tii

The Telecommunication Infrastructure Index is an arithmetic average composite of four indicators:

- (i) estimated internet users per 100 inhabitants;
- (ii) number of mobile subscribers per 100 inhabitants;
- (iii) active mobile-broadband subscription; and
- (iv) number of fixed broadband subscriptions per 100 inhabitants.

The International Telecommunication Union is the primary source of data in each case. Data for each component was extracted from the ITU source.

Type of variable: Continuous

4.110 UNESCO's Feature Films and Cinema Data

Dataset by: UNESCO

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

UNESCO. (2022a). Unesco institute for statistics [Adapted from: Feature Films]. <http://data.uis.unesco.org/>

Dataset found at: <http://data.uis.unesco.org/>

Last update by original source: 2022-01-04

Date of download: 2022-11-28

The UNESCO Institute for Statistics (UIS) is the official and trusted source of internationally-comparable data on education, science, culture and communication.

As the official statistical agency of UNESCO, the UIS produces a wide range of state-of-the-art databases to fuel the policies and investments needed to transform lives and propel the world towards its development goals. This dataset; the Feature Films dataset, comprises information on the film industry for the observed countries.

The UIS provides free access to data for all UNESCO countries and regional groupings from 1970 to the most recent year available.

The data for this dataset has been archived by UNESCO. You can find it in this link as well <https://apiportal.uis.unesco.org/bdds>.

The UNESCO Institute for Statistics (UIS) is the official and trusted source of internationally-comparable data on education, science, culture and communication.

As the official statistical agency of UNESCO, the UIS produces a wide range of state-of-the-art databases to fuel the policies and investments needed to transform lives and propel the world towards its development goals. This dataset; the Other Policy Relevant Indicators (OPRI) formerly the NATMON dataset, contains indicators on education.

The UIS provides free access to data for all UNESCO countries and regional groupings from 1970 to the most recent year available.

4.111.1 Official entrance age to early childhood education (years)

QoG Code: `une_oaece`

Official entrance age to early childhood education (years). Age at which students would enter a given programme or level of education assuming they start at the official entrance age for the lowest level of education, study full-time throughout and progressed through the system without repeating or skipping a grade. The theoretical entrance age to a given programme or level is typically, but not always, the most common entrance age.

Date of download: 2022-11-28

The UNESCO Institute for Statistics (UIS) is the official and trusted source of internationally-comparable data on education, science, culture and communication.

As the official statistical agency of UNESCO, the UIS produces a wide range of state-of-the-art databases to fuel the policies and investments needed to transform lives and propel the world towards its development goals. This dataset; the SDG Global and Thematic Indicators, comprises information on the Sustainable Development Goals on education.

The UIS provides free access to data for all UNESCO countries and regional groupings from 1970 to the most recent year available.

4.112.1 Gross intake ratio to the last grade of lower secondary general education, female (%)

QoG Code: `une_girlglsf`

Gross intake ratio to the last grade of lower secondary general education, female (%).

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016

4.113 Unified Democracy Scores

Dataset by: Pemstein, Meserve and Melton

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Pemstein, D., Meserve, S. A., & Melton, J. (2017). Democratic compromise: A latent variable analysis of ten measures of regime type. *Political Analysis*, 18(4), 426–449. <https://doi.org/10.1093/pan/mpq020>

Dataset found at: <http://www.unified-democracy-scores.net/uds.html>

Last update by original source: 2014-03-14

Date of download: 2022-10-12

The Unified Democracy Scores (UDS) covers the time period 1946-2012. These scores incorporate updates to three of the ten original measures - Freedom House (2014), Polity IV (Marshall et al., 2012), and Van Hanen (2012) - that feature in the analysis that the authors report in their 2010 article. In addition, the most recent release added a recently developed measure of democracy - Economist Intelligence Unit (2012) - to its framework.

4.113.1 Unified Demo. Score Posterior (Mean)

QoG Code: uds_mean

Unified Democracy Score Posterior (Mean).

V-dem [country-year/country-date] dataset v12. <https://doi.org/10.23696/vdemds22>

Dataset found at: <https://v-dem.net/en/data/>

Last update by original source: 2022-03-31

Date of download: 2022-08-29

Varieties of Democracy (V-Dem) is a novel approach to conceptualizing and measuring democracy. It provides a multidimensional and disaggregated dataset that reflects the complexity of the concept of democracy as a system of rule that goes beyond the simple presence of elections. The V-Dem project distinguishes between five high-level principles of democracy: electoral, liberal, participatory, deliberative, and egalitarian, and collects data to measure these principles.

Please note there have been some changes introduced to the methodology; please refer to the website of the original source to read said modifications in more detail.

4.114.1 Academic Freedom Index

QoG Code: `vdem_academ`

Academic freedom index. To what extent is academic freedom respected?

Clarifications: Academic freedom is understood as the right of academics, without constriction by prescribed doctrine, to freedom of teaching and discussion, freedom in carrying out research and disseminating and publishing the results thereof, freedom to express freely their opinion about the institution or system in which they work, freedom from institutional censorship and freedom to participate in professional or representative academic bodies (UNESCO 1997 Recommendation concerning the Status of Higher-Education Teaching Personnel).

The Academic Freedom Index is designed to provide an aggregated measure that captures the de facto realization of academic freedom, including the degree to which higher-education institutions are autonomous. Aggregation: The index is formed by point estimates drawn from a Bayesian factor analysis model including the following indicators: freedom to research and teach, freedom of academic exchange and dissemination, institutional autonomy, campus integrity, freedom of academic and cultural expression.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 173	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 181
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.114.2 Political corruption index

QoG Code: vdem_corr

The political corruption index addresses how pervasive political corruption is.

Clarification: The directionality of the V-Dem corruption index runs from less corrupt (0) to more corrupt (1) (unlike the other V-Dem variables that generally run from less democratic to more democratic situation). The corruption index includes measures of six distinct types of corruption that cover both different areas and levels of the polity realm, distinguishing between executive, legislative and judicial corruption. Within the executive realm, the measures also distinguish between corruption mostly pertaining to bribery and corruption due to embezzlement. Finally, they differentiate between corruption in the highest echelons of the executive (at the level of the rulers/cabinet) on the one hand, and in the public sector at large on the other. The measures thus tap into several distinguished types of corruption: both 'petty' and 'grand'; both bribery and theft; both corruption aimed and influencing law making and that affecting implementation. Aggregation: The index is arrived at by taking the average of (a) public sector corruption index; (b) executive corruption index; (c) the indicator for legislative corruption; and (d) the indicator for judicial corruption. In other words, these four different government spheres are weighted equally in the resulting index. V-Dem replaces missing values for countries with no legislature by only taking the average of (a), (b) and (d).

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 173	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 184

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.114.3 Deliberative democracy index

QoG Code: vdem_delibdem

Deliberative democracy index. Question: To what extent is the ideal of deliberative democracy achieved?

Clarification: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions - as contrasted with emotional appeals, solidary attachments, parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels - from preference formation to final decision - among informed and competent participants who are open to persuasion. To make it a measure of not only the deliberative principle but also of democracy, the index also takes the level of electoral democracy into account.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 173

Available in Time-series

Time-series min. year: 1946
Time-series max. year: 2021
Total N. of countries covered: 184

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

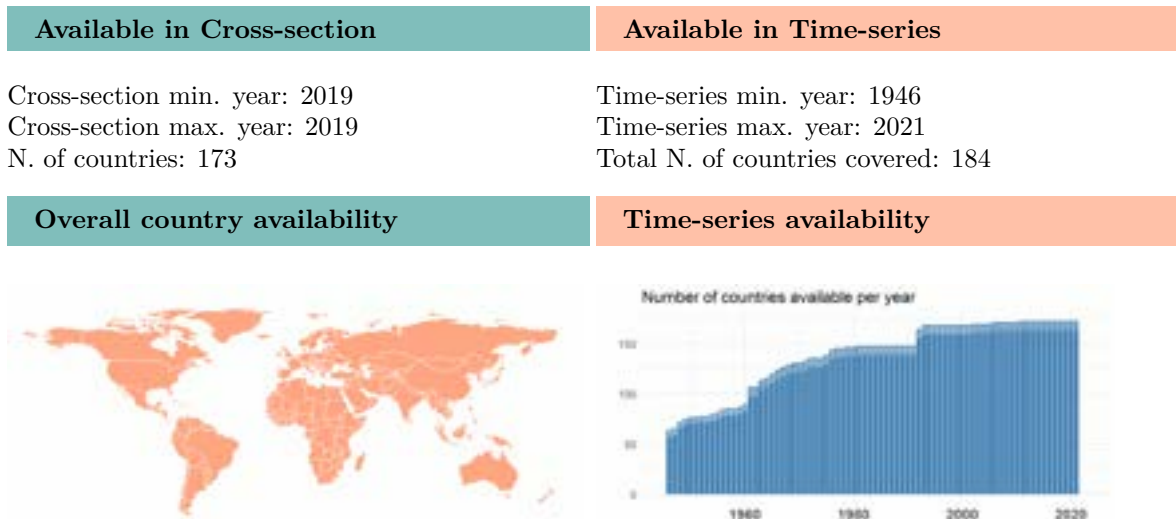

4.114.4 Deliberative component index

QoG Code: vdem_dl_delib

Deliberative component index. Question: To what extent is the deliberative principle of democracy achieved?

Clarification: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions - as contrasted with emotional appeals, solidary attachments, parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels - from preference formation to final decision - among informed and competent participants who are open to persuasion. To measure these features of a polity, we try to determine the extent to which political elites give public justifications for their positions on matters of public policy, justify their positions in terms of the public good, acknowledge and respect counter-arguments; and how wide the range of consultation is at elite levels. Aggregation: The index is formed by point estimates drawn from a Bayesian factor analysis model including the following indicators: reasoned justification, common good justification, respect for counterarguments, range of consultation, and engaged society.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.114.5 Electoral component index

QoG Code: vdem_edcomp_thick

Electoral component index. Question: To what extent is the electoral principle of democracy achieved?

Clarifications: The electoral principle of democracy seeks to achieve responsiveness and accountability between leaders and citizens through the mechanism of competitive elections. This is presumed to be achieved when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and the chief executive of a country is selected directly or indirectly through elections. Aggregation: The electoral component index is operationalized as a chain defined by its weakest link of freedom of association, suffrage, clean elections, and elected executive.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 173	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 184

[Find more information about this variable in the QoG Data Finder](#)

4.114.6 Egalitarian component index

QoG Code: vdem_egal

Egalitarian component index. Question: To what extent is the egalitarian principle achieved?

Clarifications: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved when 1) rights and freedoms of individuals are protected equally across all social groups; 2) resources are distributed equally across all social groups; and 3) access to power is equally distributed by gender, socioeconomic class and social group. Aggregation: This index is formed by averaging the following indices: equal protection index and equal distribution of resources.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 173	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 184
Overall country availability	Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.114.7 Egalitarian democracy index

QoG Code: vdem_egaldem

Egalitarian democracy index. Question: To what extent is the ideal of egalitarian democracy achieved?

Clarifications: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved when 1) rights and freedoms of individuals are protected equally across all social groups; and 2) resources are distributed equally across all social groups. The distribution of resources must be sufficient to ensure that citizens' basic needs are met in a way that enables their meaningful participation. Additionally, an equal distribution of resources ensures the potential for greater equality in the distribution of power. To make it a measure of egalitarian democracy, the index also takes the level of electoral democracy into account.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 173	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 184

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.114.8 Election vote buying

QoG Code: vdem_elvotbuy

Election vote buying. Question: In this national election, was there evidence of vote and/or turnout buying?

Clarification: Vote and turnout buying refers to the distribution of money or gifts to individuals, families, or small groups in order to influence their decision to vote/not vote or whom to vote for. It does not include legislation targeted at specific constituencies, i.e., "porkbarrel" legislation. V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
Cross-section max. year: 2021
N. of countries: 166

Available in Time-series

Time-series min. year: 1946

Time-series availability

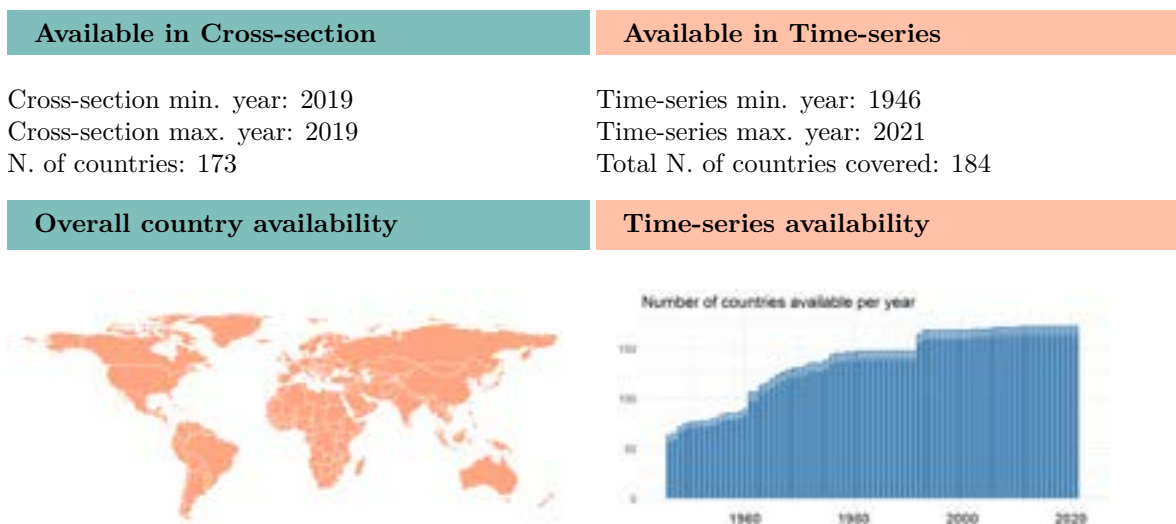

[Find more information about this variable in the QoG Data Finder](#)

4.114.9 Executive bribery and corrupt exchanges

QoG Code: vdem_exbribe

Executive bribery and corrupt exchanges. Question: How routinely do members of the executive (the head of state, the head of government, and cabinet ministers), or their agents, grant favors in exchange for bribes, kickbacks, or other material inducements? V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.114.10 Public sector corrupt exchanges

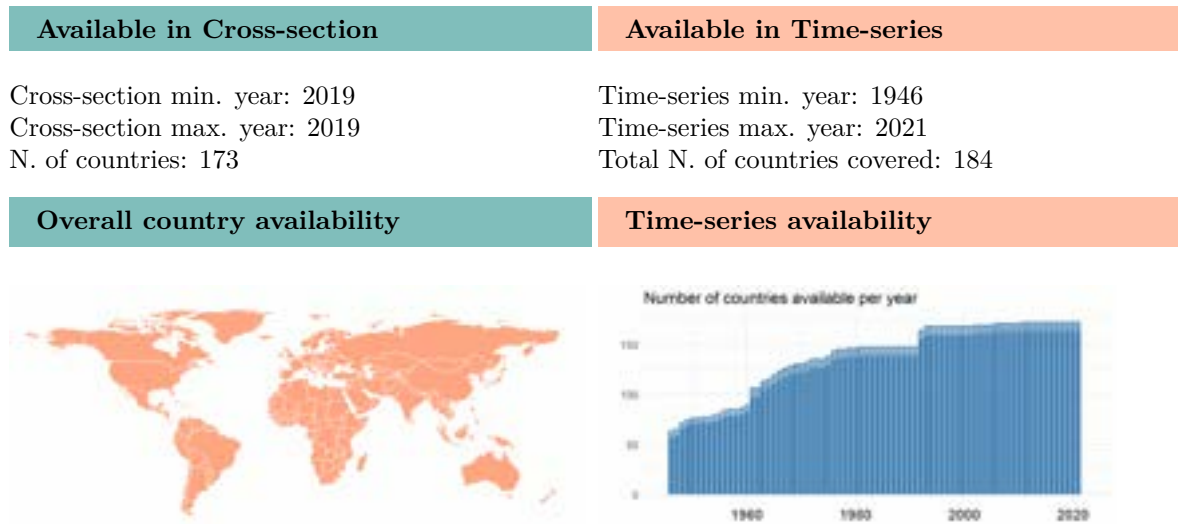

QoG Code: vdem_excrptps

Public sector corrupt exchanges. Question: How routinely do public sector employees grant favors in exchange for bribes, kickbacks, or other material inducements?

Clarification: When responding to this question, we would like you to think about a typical person employed by the public sector, excluding the military. If you think there are large discrepancies between branches of the public sector, between the national/federal and subnational/state level, or between the core bureaucracy and employees working with public service delivery, please try to average them out before stating your response. V-Dem uses a specifically designed measurement model to

provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.114.11 Executive corruption index

QoG Code: vdem_execorr

Executive corruption index. Question: How routinely do members of the executive, or their agents grant favors in exchange for bribes, kickbacks, or other material inducements, and how often do they steal, embezzle, or misappropriate public funds or other state resources for personal or family use?

Clarification: The directionality of the V-Dem corruption index runs from less corrupt to more corrupt (unlike the other V-Dem variables that generally run from less democratic to more democratic situation). Aggregation: The index is formed by taking the average of the point estimates from a Bayesian factor analysis model of the indicators for executive bribery and executive embezzlement.

Type of variable: Continuous

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.114.12 Executive embezzlement and theft

QoG Code: vdem_exembez

Executive embezzlement and theft. Question: How often do members of the executive (the head of state, the head of government, and cabinet ministers), or their agents, steal, embezzle, or misappropriate public funds or other state resources for personal or family use? V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

[Find more information about this variable in the QoG Data Finder](#)

4.114.15 Women political empowerment index

QoG Code: vdem_gender

Women political empowerment index. Question: How politically empowered are women?

Clarifications: Women's political empowerment is defined as a process of increasing capacity for women, leading to greater choice, agency, and participation in societal decision-making. It is understood to incorporate three equally-weighted dimensions: fundamental civil liberties, women's open discussion of political issues and participation in civil society organizations, and the descriptive representation of women in formal political positions. Aggregation: The index is formed by taking the average of women's civil liberties index, women's civil society participation index, and women's political participation index.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 173	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 184

4.114.17 Liberal democracy index

QoG Code: vdem_libdem

The liberal democracy index addresses to what extent the ideal of liberal democracy is achieved.

Clarifications: The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a "negative" view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. To make this a measure of liberal democracy, the index also takes the level of electoral democracy into account.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.114.18 Liberal component index

QoG Code: vdem_liberal

Liberal component index. Question: To what extent is the liberal principle of democracy achieved?

Clarification: The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a "negative" view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. Aggregation: This index is formed by averaging the following indices: equality before the law and individual liberties, judicial constraints on the executive, and legislative constraints on the executive.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 173	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 184

[Find more information about this variable in the QoG Data Finder](#)

4.114.20 Participatory component index

QoG Code: vdem_partip

Participatory component index. Question: To what extent is the participatory principle achieved?

Clarification: The participatory principle of democracy emphasizes active participation by citizens in all political processes, electoral and non-electoral. It is motivated by uneasiness about a bedrock practice of electoral democracy: delegating authority to representatives. Thus, direct rule by citizens is preferred, wherever practicable. This model of democracy thus takes suffrage for granted, emphasizing engagement in civil society organizations, direct democracy, and subnational elected bodies. Aggregation: This index is formed by averaging the following indices: civil society participation, direct popular vote, elected local government power, and elected regional government power.

Type of variable: Continuous

Available in Cross-section

Clarifications: The participatory principle of democracy emphasizes active participation by citizens in all political processes, electoral and non-electoral. It is motivated by uneasiness about a bedrock practice of electoral democracy: delegating authority to representatives. Thus, direct rule by citizens is preferred, wherever practicable. This model of democracy thus takes suffrage for granted, emphasizing engagement in civil society organizations, direct democracy, and subnational elected bodies. To make it a measure of participatory democracy, the index also takes the level of electoral democracy into account.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.114.22 Electoral democracy index

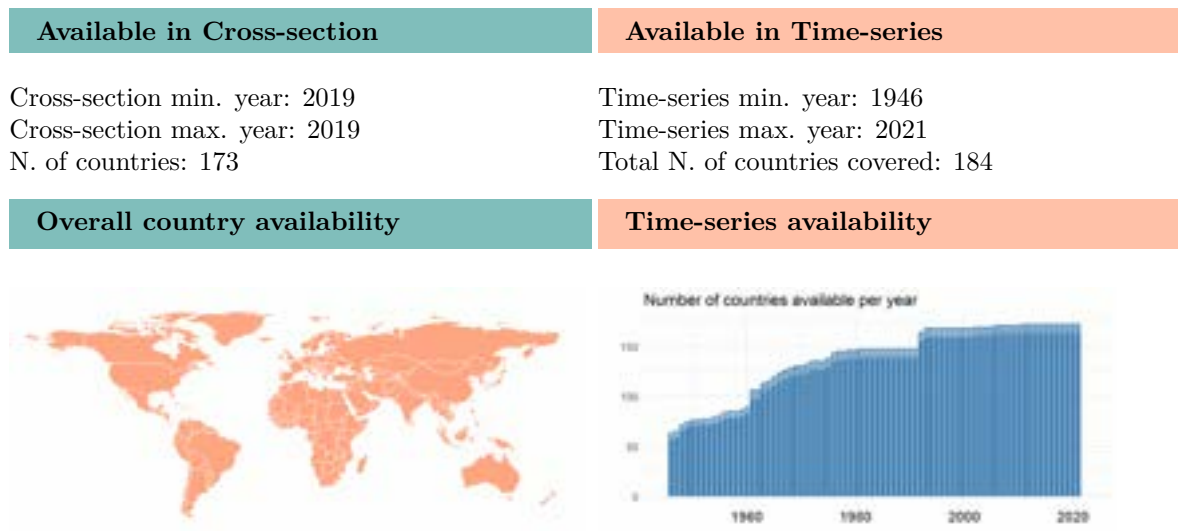

QoG Code: vdem_polyarchy

Electoral democracy index. Question: To what extent is the ideal of electoral democracy in its fullest sense achieved?

Clarifications: The electoral principle of democracy seeks to embody the core value of making rulers responsive to citizens, achieved through electoral competition for the electorate's approval under circumstances when suffrage is extensive; political and civil society organizations can operate freely;

elections are clean and not marred by fraud or systematic irregularities; and elections affect the composition of the chief executive of the country. In between elections, there is freedom of expression and an independent media capable of presenting alternative views on matters of political relevance. In the V-Dem conceptual scheme, electoral democracy is understood as an essential element of any other conception of (representative) democracy - liberal, participatory, deliberative, egalitarian, or some other. Aggregation: The index is formed by taking the average of, on the one hand, the sum of the indices measuring freedom of association (thick), suffrage, clean elections, elected executive (de jure) and freedom of expression; and, on the other, the five-way interaction between those indices. This is half way between a straight average and strict multiplication, meaning the average of the two. It is thus a compromise between the two most well known aggregation formulas in the literature, both allowing "compensation" in one sub-component for lack of polyarchy in the others, but also punishing countries not strong in one sub-component according to the "weakest link" argument. The aggregation is done at the level of Dahl's sub-components (with the one exception of the non-electoral component).

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.114.23 Public sector corruption index

QoG Code: vdem_pubcorr

Public sector corruption index. Question: To what extent do public sector employees grant favors in exchange for bribes, kickbacks, or other material inducements, and how often do they steal, embezzle, or misappropriate public funds or other state resources for personal or family use?

Clarification: The directionality of the V-Dem corruption index runs from less corrupt to more corrupt (unlike the other V-Dem variables that generally run from less democratic to more democratic situation). Aggregation: The index is formed by taking the average of the point estimates from a Bayesian factor analysis model of the indicators for public sector bribery and embezzlement.

4.115 Voter Turnout Database

Dataset by: Institute for Democracy and Electoral Assistance

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

The International Institute for Democracy and Electoral Assistance. (2022b). Voter turnout database. <https://www.idea.int/data-tools/data/voter-turnout>

Dataset found at: <https://www.idea.int/data-tools/data/voter-turnout>

Date of download: 2022-12-14

The Voter Turnout Database is the best resource for a wide array of statistics on voter turnout from around the world. It contains the most comprehensive global collection of voter turnout statistics from presidential and parliamentary elections since 1945. Always growing, the database also includes European Parliament elections, as presented by country using both the number of registered voters and voting age population as indicators, and in some cases the data includes statistics on spoilt ballot rate.

4.116.7 Agricultural irrigated land (% of total agricultural land)

QoG Code: wdi_agrland

Agricultural land refers to the share of land area that is arable, under permanent crops, and under permanent pastures. Arable land includes land defined by the FAO as land under temporary crops (double-cropped areas are counted once), temporary meadows for mowing or for pasture, land under market or kitchen gardens, and land temporarily fallow. Land abandoned as a result of shifting cultivation is excluded. Land under permanent crops is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber. Permanent pasture is land used for five or more years for forage, including natural and cultivated crops.

4.116.20 Births attended by skilled health staff (% of total)

QoG Code: wdi_birthskill

Births attended by skilled health staff are the percentage of deliveries attended by personnel trained to give the necessary supervision, care, and advice to women during pregnancy, labor, and the post-partum period; to conduct deliveries on their own; and to care for newborns.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.116.21 Battle-related deaths (number of people)

QoG Code: wdi_brdeath

Battle-related deaths are deaths in battle-related conflicts between warring parties in the conflict dyad (two conflict units that are parties to a conflict). Typically, battle-related deaths occur in warfare involving the armed forces of the warring parties. This includes traditional battlefield fighting, guerrilla activities, and all kinds of bombardments of military units, cities, and villages, etc. The targets are usually the military itself and its installations or state institutions and state representatives, but there is often substantial collateral damage in the form of civilians being killed in crossfire, in indiscriminate bombings, etc. All deaths—military as well as civilian—incurred in such situations, are counted as battle-related deaths.

4.116.73 Government expenditure on education, total (% of GDP)

QoG Code: wdi_expedu

General government expenditure on education (current, capital, and transfers) is expressed as a percentage of GDP. It includes expenditure funded by transfers from international sources to government. General government usually refers to local, regional and central governments.

Note: The value for Tuvalu in 1997 has been recoded to missing due to an extreme and very unlikely value.

Type of variable: Continuous

[Find more information about this variable in the QoG Data Finder](#)

4.116.74 Government expenditure on education, total (% of government expenditure)

QoG Code: wdi_expeduge

Total general (local, regional and central) government expenditure on education (current, capital, and transfers), expressed as a percentage of total general government expenditure on all sectors (including health, education, social services, etc.). It includes expenditure funded by transfers from international sources to government. Public education expenditure includes spending by local/municipal, regional and national governments (excluding household contributions) on educational institutions (both public and private), education administration, and subsidies for private entities (students/households and other private entities). In some instances data on total public expenditure on education refers only to the ministry of education and can exclude other ministries that spend a part of their budget on educational activities. The indicator is calculated by dividing total public expenditure on education incurred by all government agencies/departments by the total government expenditure and multiplying by 100. For more information, consult the UNESCO Institute of Statistics website: <http://www.uis.unesco.org/Education/>

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2021 N. of countries: 180	Time-series min. year: 1980 Time-series max. year: 2021 Total N. of countries covered: 190

4.116.75 Expenditure on primary education (% of government expenditure on edu.)

QoG Code: wdi_expedup

Expenditure on Primary education, expressed as a percentage of total general government expenditure on education. Divide government expenditure on a given level of education (ex. primary, secondary) by total government expenditure on education (all levels combined), and multiply by 100. A high percentage of government expenditure on education spent on a given level denotes a high priority given to that level compared to others. When interpreting this indicator, one should take into account enrollment at that level, and the relative costs per student between different levels of education. For more information, consult the UNESCO Institute of Statistics website: <http://www.uis.unesco.org/Education/>

Type of variable: Continuous

Available in Cross-section	Available in Time-series

4.116.78 Military expenditure (% of GDP)

QoG Code: wdi_expmil

Military expenditure (% of GDP). Military expenditures data from SIPRI are derived from the NATO definition, which includes all current and capital expenditures on the armed forces, including peacekeeping forces; defense ministries and other government agencies engaged in defense projects; paramilitary forces, if these are judged to be trained and equipped for military operations; and military space activities. Such expenditures include military and civil personnel, including retirement pensions of military personnel and social services for personnel; operation and maintenance; procurement; military research and development; and military aid (in the military expenditures of the donor country). Excluded are civil defense and current expenditures for previous military activities, such as for veterans' benefits, demobilization, conversion, and destruction of weapons. This definition cannot

be applied for all countries, however, since that would require much more detailed information than is available about what is included in military budgets and off-budget military expenditure items. (For example, military budgets might or might not cover civil defense, reserves and auxiliary forces, police and paramilitary forces, dual-purpose forces such as military and civilian police, military grants in kind, pensions for military personnel, and social security contributions paid by one part of government to another).

4.116.116 Gini index

QoG Code: wdi_gini

Gini index measures the extent to which the distribution of income (or, in some cases, consumption expenditure) among individuals or households within an economy deviates from a perfectly equal distribution. A Lorenz curve plots the cumulative percentages of total income received against the cumulative number of recipients, starting with the poorest individual or household. The Gini index measures the area between the Lorenz curve and a hypothetical line of absolute equality, expressed as a percentage of the maximum area under the line. Thus a Gini index of 0 represents perfect equality, while an index of 100 implies perfect inequality.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2020 N. of countries: 115	Time-series min. year: 1967 Time-series max. year: 2021 Total N. of countries covered: 167

[Find more information about this variable in the QoG Data Finder](#)

4.116.117 GNI, Atlas method (current US dollar)

QoG Code: wdi_gniatlcur

GNI (formerly GNP) is the sum of value added by all resident producers plus any product taxes (less subsidies) not included in the valuation of output plus net receipts of primary income (compensation of employees and property income) from abroad. Data are in current U.S. dollars. GNI, calculated in national currency, is usually converted to U.S. dollars at official exchange rates for comparisons across economies, although an alternative rate is used when the official exchange rate is judged to diverge by an exceptionally large margin from the rate actually applied in international transactions. To smooth fluctuations in prices and exchange rates, a special Atlas method of conversion is used by the World Bank. This applies a conversion factor that averages the exchange rate for a given year and the two preceding years, adjusted for differences in rates of inflation between the country, and through 2000, the G-5 countries (France, Germany, Japan, the United Kingdom, and the United States). From 2001, these countries include the Euro area, Japan, the United Kingdom, and the United States.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2018 Cross-section max. year: 2019 N. of countries: 187	Time-series min. year: 1962 Time-series max. year: 2021 Total N. of countries covered: 197

"People displaced" refers to the number of people living in

displacement as of the end of each year.

Type of variable: Discrete

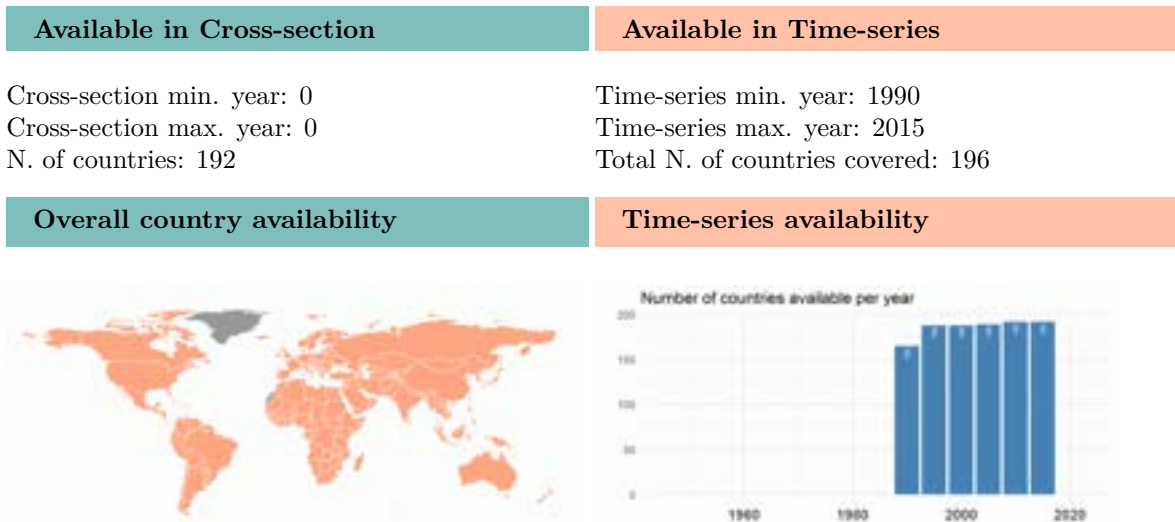

[Find more information about this variable in the QoG Data Finder](#)

4.116.137 International migrant stock (% of population)

QoG Code: wdi_imig

International migrant stock is the number of people born in a country other than that in which they live. It also includes refugees. The data used to estimate the international migrant stock at a particular time are obtained mainly from population censuses. The estimates are derived from the data on foreign-born population—people who have residence in one country but were born in another country. When data on the foreign-born population are not available, data on foreign population—that is, people who are citizens of a country other than the country in which they reside—are used as estimates. After the breakup of the Soviet Union in 1991 people living in one of the newly independent countries who were born in another were classified as international migrants. Estimates of migrant stock in the newly independent states from 1990 on are based on the 1989 census of the Soviet Union. For countries with information on the international migrant stock for at least two points in time, interpolation or extrapolation was used to estimate the international migrant stock on July 1 of the reference years. For countries with only one observation, estimates for the reference years were derived using rates of change in the migrant stock in the years preceding or following the single observation available. A model was used to estimate migrants for countries that had no data.

Type of variable: Continuous

4.116.183 Literacy rate, youth total (% of people ages 15-24)

QoG Code: wdi_litry

Number of people age 15 to 24 years who can both read and write with understanding a short simple statement on their everyday life, divided by the population in that age group. Generally, 'literacy' also encompasses 'numeracy', the ability to make simple arithmetic calculations. Divide the number of people aged 15 to 24 years who are literate by the total population in the same age group and multiply the result by 100.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2021 N. of countries: 135	Time-series min. year: 1970 Time-series max. year: 2021 Total N. of countries covered: 158
Overall country availability	Time-series availability

4.116.188 Mobile cellular subscriptions (per 100 people)

QoG Code: wdi_mobile

Mobile cellular telephone subscriptions are subscriptions to a public mobile telephone service that provide access to the PSTN using cellular technology. The indicator includes (and is split into) the number of postpaid subscriptions, and the number of active prepaid accounts (i.e. that have been used during the last three months). The indicator applies to all mobile cellular subscriptions that offer voice communications. It excludes subscriptions via data cards or USB modems, subscriptions to public mobile data services, private trunked mobile radio, telepoint, radio paging and telemetry services.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 193	Time-series min. year: 1960 Time-series max. year: 2021 Total N. of countries covered: 200

4.116.232 Refugee population by country or territory of asylum

QoG Code: wdi_refasy

Refugees are people who are recognized as refugees under the 1951 Convention Relating to the Status of Refugees or its 1967 Protocol, the 1969 Organization of African Unity Convention Governing the Specific Aspects of Refugee Problems in Africa, people recognized as refugees in accordance with the UNHCR statute, people granted refugee-like humanitarian status, and people provided temporary protection. Asylum seekers—people who have applied for asylum or refugee status and who have not yet received a decision or who are registered as asylum seekers—are excluded. Palestinian refugees are people (and their descendants) whose residence was Palestine between June 1948 and May 1948 and who lost their homes and means of livelihood as a result of the 1948 Arab-Israeli conflict. Country of asylum is the country where an asylum claim was filed and granted.

Type of variable: Discrete

4.116.233 Refugee population by country or territory of origin

QoG Code: wdi_refori

Refugees are people who are recognized as refugees under the 1951 Convention Relating to the Status of Refugees or its 1967 Protocol, the 1969 Organization of African Unity Convention Governing the Specific Aspects of Refugee Problems in Africa, people recognized as refugees in accordance with the UNHCR statute, people granted refugee-like humanitarian status, and people provided temporary protection. Asylum seekers—people who have applied for asylum or refugee status and who have not yet received a decision or who are registered as asylum seekers—are excluded. Palestinian refugees are people (and their descendants) whose residence was Palestine between June 1946 and May 1948 and who lost their homes and means of livelihood as a result of the 1948 Arab-Israeli conflict. Country of origin generally refers to the nationality or country of citizenship of a claimant.

4.116.240 Statistical Capacity score (Overall average)

QoG Code: wdi_statcap

The Statistical Capacity Indicator is a composite score assessing the capacity of a country's statistical system. It is based on a diagnostic framework assessing the following areas: methodology; data sources; and periodicity and timeliness. Countries are scored against 25 criteria in these areas, using publicly available information and/or country input. The overall Statistical Capacity score is then calculated as a simple average of all three area scores on a scale of 0-100.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2016 Cross-section max. year: 2019 N. of countries: 148	Time-series min. year: 2004 Time-series max. year: 2020 Total N. of countries covered: 149

[Find more information about this variable in the QoG Data Finder](#)

4.116.243 Services, value added (constant 2015 US dollar)

QoG Code: wdi_sva2015

Services correspond to ISIC divisions 45-99. They include value added in wholesale and retail trade (including hotels and restaurants), transport, and government, financial, professional, and personal services such as education, health care, and real estate services. Also included are imputed bank service charges, import duties, and any statistical discrepancies noted by national compilers as well as discrepancies arising from rescaling. Value added is the net output of a sector after adding up all outputs and subtracting intermediate inputs. It is calculated without making deductions for depreciation of fabricated assets or depletion and degradation of natural resources. The industrial origin of value added is determined by the International Standard Industrial Classification (ISIC), revision 4. Data are in constant 2015 prices, expressed in U.S. dollars.

Type of variable: Continuous

4.116.246 CPIA transparency-accountability-corruption in public sector rating (1-6)

QoG Code: wdi_tacpsr

Transparency, accountability, and corruption in the public sector assess the extent to which the executive can be held accountable for its use of funds and for the results of its actions by the electorate and by the legislature and judiciary, and the extent to which public employees within the executive are required to account for administrative decisions, use of resources, and results obtained. The three main dimensions assessed here are the accountability of the executive to oversight institutions and of public employees for their performance, access of civil society to information on public affairs, and state capture by narrow vested interests.

Alvaredo, F., Atkinson, A. B., Piketty, T., & Saez, E. (2022). World inequality database. <http://wid.world/data>

Chancel, L., Piketty, T., Saez, E., & Zucman, G. (2022). World inequality report 2022. <http://wid.world/>

Dataset found at: <http://wid.world/data/>

Last update by original source: 2021-12-07

Date of download: 2022-10-11

The World Inequality Database (WID.world) aims to provide open and convenient access to the most extensive available database on the historical evolution of the world distribution of income and wealth, both within countries and between countries.

The WID was initially created as the The World Top Incomes Database (WTID) in January 2011 with the aim of providing convenient and free access to all the existing series. The WTID expanded to include series on income inequality for more than thirty countries, spanning over most of the 20th and early 21st centuries, with over forty additional countries now under study.

Built to accompany the publishing of the two books *Top Incomes: a Global Perspective* (2010, Oxford University Press) and *Top Incomes over the XX Century* (2007, Oxford University Press). The WID offers the most comprehensive set of historical series on wealth inequality available so far.

4.118.1 Top 10% income share

QoG Code: `top_top10_income_share`

Income share of the top 10% of the population. This refers to the share of pre-tax national income among equal-split adults for the top 10% in each country-year.

The pre-tax national income is the sum of all pre-tax personal income flows accruing to the owners of the production factors, labor and capital, before taking into account the operation of the tax/transfer system, but after taking into account the operation of pension system.

The central difference between personal factor income and pre-tax income is the treatment of pensions, which are counted on a contribution basis by factor income and on a distribution basis by pre-tax income. The population is comprised of individuals over age 20. The base unit is the individual (rather than the household) but resources are split equally within couples.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2019 Cross-section max. year: 2019 N. of countries: 172	Time-series min. year: 1946 Time-series max. year: 2021 Total N. of countries covered: 178

4.119 World Press Freedom Index

Dataset by: Reporters Sans Frontières

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Reporters sans frontières. (2022). World press freedom index. <https://rsf.org/en/index>

Dataset found at: <https://rsf.org/en/index>

Date of download: 2022-09-23

The Reporters Without Borders World Press Freedom Index ranks the performance of 180 countries according to a range of criteria that include media pluralism and independence, respect for the safety and freedom of journalists, and the legislative, institutional and infrastructural environment in which the media operate.

4.119.1 Press Freedom Index: Economic Context Component

QoG Code: `rsf_eci`

Economic context component of Press Freedom Index. Questions asked for the economic context component aim to evaluate:

- economic constraints linked to governmental policies (including the difficulty of creating a news media outlet, favouritism in the allocation of state subsidies, and corruption);
- economic constraints linked to non-state actors (advertisers and commercial partners);
- economic constraints linked to media owners seeking to promote or defend their business interests.

A subsidiary score ranging from 0 to 100 is calculated for each indicator. All of the subsidiary scores contribute equally to the global score. And within each indicator, all the questions and subquestions have equal weight.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2021
Cross-section max. year: 2021
N. of countries: 175

Available in Time-series

Time-series min. year: 2021
Time-series max. year: 2021
Total N. of countries covered: 175

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.119.2 Press Freedom Index: Legal Context Component

QoG Code: rsf_lci

Legal context component of Press Freedom Index. Questions asked for the legal context component concern the legislative and regulatory environment for journalists, in particular:

- the degree to which journalists and media are free to work without censorship or judicial sanctions, or excessive restrictions on their freedom of expression;
- the ability to access information without discrimination between journalists, and the ability to protect sources;
- the presence or absence of impunity for those responsible for acts of violence against journalists.

A subsidiary score ranging from 0 to 100 is calculated for each indicator. All of the subsidiary scores contribute equally to the global score. And within each indicator, all the questions and subquestions have equal weight.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2021
Cross-section max. year: 2021
N. of countries: 175

Available in Time-series

Time-series min. year: 2021
Time-series max. year: 2021
Total N. of countries covered: 175

Overall country availability

Time-series availability

4.119.3 Press Freedom Index: Political Context Component

QoG Code: rsf_pci

Political context component of Press Freedom Index. Questions asked for political context component aim to evaluate:

- the degree of support and respect for media autonomy vis-à-vis political pressure from the state or from other political actors;
- the level of acceptance of a variety of journalistic approaches satisfying professional standards, including politically aligned approaches and independent approaches;
- the degree of support for the media in their role of holding politicians and government to account in the public interest.

A subsidiary score ranging from 0 to 100 is calculated for each indicator. All of the subsidiary scores contribute equally to the global score. And within each indicator, all the questions and subquestions have equal weight.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2021
Cross-section max. year: 2021
N. of countries: 175

4.119.4 Press Freedom Index

QoG Code: rsf_pfi

Press Freedom Index, using the methodology of the 2022 report. The Press Freedom Index measures the amount of freedom journalists, and the media have in each country, and the efforts made by governments to see that press freedom is respected. It does not take account of all human rights violations, only those that affect press freedom. Neither is it an indicator of the quality of a country's media.

Note: Higher scores indicate that country has more press freedom.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2021
Cross-section max. year: 2021
N. of countries: 175

Available in Time-series

Time-series min. year: 2021
Time-series max. year: 2021

[Find more information about this variable in the QoG Data Finder](#)

4.119.5 Press Freedom Index (methodology for 2002-2012)

QoG Code: rsf_pfi0212

The Press Freedom Index was calculated using the methodology used in RSF 2002-2012 reports. The Press Freedom Index measures the amount of freedom journalists, and the media have in each country, and the efforts made by governments to see that press freedom is respected. It does not take account of all human rights violations, only those that affect press freedom. Neither is it an indicator of the quality of a country's media.

Note: Press Freedom Index for 2002-2012 is reversely ordered, which means countries with less press freedom got higher scores.

Except for 2012, the index ranges between 0 (total press freedom) and 100 (no press freedom). However, for the 2012 data release, RSF changed the scale so that negative values could be assigned to countries with more press freedom. We have decided to leave the data as is.

Type of variable: Continuous

Available in Time-series

Time-series min. year: 2003
Time-series max. year: 2011
Total N. of countries covered: 174

[Find more information about this variable in the QoG Data Finder](#)

4.119.7 Press Freedom Index: Sociocultural Context Component

QoG Code: rsf_sci

Sociocultural context component of Press Freedom Index. Questions asked for sociocultural context component aim to evaluate:

- social constraints resulting from denigration and attacks on the press based on such issues as gender, class, ethnicity and religion;
- cultural constraints, including pressure on journalists to not question certain bastions of power or influence or not cover certain issues because it would run counter to the prevailing culture in the country or territory.

A subsidiary score ranging from 0 to 100 is calculated for each indicator. All of the subsidiary scores contribute equally to the global score. And within each indicator, all the questions and subquestions have equal weight.

Type of variable: Continuous

Available in Cross-section	Available in Time-series
Cross-section min. year: 2021 Cross-section max. year: 2021 N. of countries: 175	Time-series min. year: 2021 Time-series max. year: 2021 Total N. of countries covered: 175

Overall country availability

Time-series availability

[Find more information about this variable in the QoG Data Finder](#)

4.119.8 Press Freedom Index: Safety Component

QoG Code: rsf_si

The questions asked for this component concern journalists safety. For this purpose, press freedom is defined as the ability to identify, gather and disseminate news and information in accordance with journalistic methods and ethics, without unnecessary risk of:

- bodily harm (including murder, violence, arrest, detention and abduction);
- psychological or emotional distress that could result from intimidation, coercion, harassment, surveillance, doxing (publication of personal information with malicious intent), degrading or hateful speech, smears and other threats targeting journalists or their loved-ones;
- professional harm resulting from, for example, the loss of ones job, the confiscation or professional equipment, or the ransacking of installations.

A subsidiary score ranging from 0 to 100 is calculated for each indicator. All of the subsidiary scores contribute equally to the global score. And within each indicator, all the questions and subquestions have equal weight.

Type of variable: Continuous

4.120 World Uncertainty Index

Dataset by: World Uncertainty Index

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Ahir, H., Bloom, N., & Furceri, D. (2022). The world uncertainty index [NBER Working Papers 29763]. <https://worlduncertaintyindex.com/>

Dataset found at: <https://worlduncertaintyindex.com/data/>

Last update by original source: 2022-12-28

Date of download: 2023-01-09

World Uncertainty Index (WUI) reflects the frequency of the word uncertainty in the quarterly Economist Intelligence Unit country reports. It is an unbalanced panel of 143 individual countries on a quarterly basis from 1952, which is presented on an annual level in QoG datasets.

Globally, the Index spikes around major events like the Gulf War, the Euro debt crisis, the Brexit vote, and the COVID pandemic. The level of uncertainty is higher in developing countries but is more synchronized across advanced economies with their tighter trade and financial linkages.

4.120.1 World Trade Uncertainty Index

QoG Code: wui_wtui

World Trade Uncertainty Index (WTUI) is constructed by counting the number of times uncertainty (and its variants) is mentioned, in proximity to a word related to trade, in the EIU country report. Specifically, the authors looked at the following words: protectionism, North American Free Trade Agreement (NAFTA), tariff, trade, United Nations Conference on Trade and Development (UNCTAD), and World Trade Organization (WTO).

Examples of texts referring to trade uncertainty include: uncertainty over the renegotiation of the North American Free Trade Agreement, and market uncertainty over future trade policy will weigh on investor sentiment. As for the main index, they scale the index per thousand of words.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 142

Available in Time-series

[Find more information about this variable in the QoG Data Finder](#)

4.120.2 World Uncertainty Index

QoG Code: wui_wui

World Uncertainty Index (WUI) was constructed for an unbalanced panel of 143 individual countries on a quarterly basis from 1952. This is the first attempt to construct a panel uncertainty index for a large set of developed and developing countries. The index reflects the frequencies of the word uncertainty (and its variants) in the Economist Intelligence Unit (EIU) country reports. To make the WUI comparable across countries, authors scale the raw counts by the total number of words in each report the number of uncertainty words per thousand words.

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2019
Cross-section max. year: 2019
N. of countries: 142

4.121 Worldwide Age Representation in Parliaments (WARP) Dataset

Dataset by: Sundström and Stockemer

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Stockemer, D., & Sundström, A. (2022). Introducing the worldwide age representation in parliaments (warp) data set. *Social Science Quarterly*, 103(7), 1765–1774. <https://doi.org/https://doi.org/10.1111/ssqu.13221>

Dataset found at: <http://www.warpdataset.com/index.php>

Last update by original source: 2022-04-01

Date of download: 2022-12-14

The WARP dataset is a comprehensive and ongoing data collection effort that provides information about the numerical presence of age groups in lower house parliaments, spanning across the globe and over time.

To date, it contains over 800 elections in 150 countries. In more detail, we provide information on the mean and median age of Members of Parliament (MPs), as well as information of the share of young or older MPs. It also provides figures that compare the presence of a certain age group of legislators in relation to the same age group in the general population. Finally, it includes gendered figures, such as the presence of young female MPs.

Notes: If more than one observation is listed per year, the latest available data is taken as a country score of the given year. We also underline that the WARP dataset coverage of MPs changes across years and countries, and coverage data can be obtained from the original website.

4.121.1 Age Representation Index (30 or under)

QoG Code: yri_agi30

The percentage of MPs aged 30 or under relative to the percent of citizens aged 30 or under in the population.

4.122 Worldwide Bureacracy Indicators

Dataset by: The World Bank Group

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

The World Bank. (2021b). Worldwide bureacracy indicators version 2.0. <https://www.worldbank.org/en/topic/migrationremittancesdiasporaissues/brief/migration-remittances-data>

Dataset found at: <https://datacatalog.worldbank.org/search/dataset/0038132>

Last update by original source: 2021-05-26

Date of download: 2022-08-03

The Worldwide Bureacracy Indicators (WWBI) database is a unique cross-national dataset on public sector employment and wages that aims to fill an information gap, thereby helping researchers, development practitioners, and policymakers gain a better understanding of the personnel dimensions of state capability, the footprint of the public sector within the overall labor market, and the fiscal implications of the public sector wage bill. The dataset is derived from administrative data and household surveys, thereby complementing existing, expert perception-based approaches.

The WWBI includes 192 indicators that are estimated from microdata drawn from the labor force and household welfare surveys and augmented with administrative data for 202 economies in five categories: the demographics of the private and public sector workforces; public sector wage premiums; relative wages and pay compression ratios, gender pay gaps; and the public sector wage bill. The micro and administrative data utilized in the construction of the WWBI are drawn from data catalogs housing surveys conducted by national statistical organizations (NSO) or multilateral organization data teams. Together, these provide an important, albeit narrow, picture of the skills and incentives of bureaucrats. Indicators on public employment track key demographic characteristics including the size of the public sector workforce (in absolute and relative numbers), their age, and distributions across genders, industries, income quintiles, and academic qualifications. Variables on compensation capture both the competitiveness of public sector wages (compared to the private sector) as well as wage differentials across industry or occupation of employment, genders, education, and income quintiles within the public and private sectors as well as pay compression ratios in public and private sectors. The indicators on the size of the wage bill offer a glimpse into the structure and affordability of the public sector within the larger economy.

4.122.1 Female to male wage ratio in the private sector (using mean)

QoG Code: `wwbi_fmwrprmean`

Female to male wage ratio in the private sector (using mean)

Type of variable: Continuous

Available in Cross-section

Cross-section min. year: 2016
