

SAHLGRENKA AKADEMIN INSTITUTIONEN FÖR BIOMEDICIN

Utlysning

Project Title: Translational mucosal biology

Project duration and dates: Sep 14 – Nov 30 2026

Application deadline: 2026-07-03

Amount: 41250 kr

Project summary:

Mucus is a crucial part of the intestinal defence and defects in the mucus system are associated with colitis. We will now study specific proteins in this protective barrier to elucidate if there are sustained defects in their expression and complex biosynthesis during colitis remission by analysing samples from Ulcerative Colitis patients in remission compared to controls.

Applicant:

The applicant should have a Medical doctor's degree with clinical experience and an Master's degree. The student is required to have good knowledge in histology of the gastrointestinal tract and previous studies on intestinal disorders are of great importance. Previous experience in laboratory medicine, histology and microscopy are considered strong merits. The student should be fluent in written and spoken English and speak Swedish at a basic level at a minimum.

Application:

Applications should be emailed to Malin Johansson, malin.johansson@medkem.gu.se
The application should include; Motivation letter, CV including contact info.
