

WORLD SCIENTISTS' WARNING TO HUMANITY

INTRODUCTION Human beings and the natural world are on a collision course. Human activities inflict harsh and often irreversible damage on the environment and on critical resources. If not checked, many of our current practices put at serious risk the future that we wish for human society and the plant and animal kingdoms, and may so alter the living world that it will be unable to sustain life in the manner that we know. Fundamental changes are urgent if we are to avoid the collision our present course will bring about.

THE ENVIRONMENT The environment is suffering critical stress:

The Atmosphere Stratospheric ozone depletion threatens us with enhanced ultraviolet radiation at the earth's surface, which can be damaging or lethal to many life forms. Air pollution near ground level, and acid precipitation, are already causing widespread injury to humans, forests, and crops.

Water Resources Heedless exploitation of depletable groundwater supplies endangers food production and other essential human systems. Heavy demands on the world's surface waters have resulted in serious shortages in some 80 countries, containing 40 percent of the world's population. Pollution of rivers, lakes, and groundwater further limits the supply.

Oceans Destructive pressure on the oceans is severe, particularly in the coastal regions which produce most of the world's food fish. The total marine catch is now at or above the estimated maximum sustainable yield. Some fisheries have already shown signs of collapse. Rivers carrying heavy burdens of eroded soil into the seas also carry industrial, municipal, agricultural, and livestock waste—some of it toxic.

Soil Loss of soil productivity, which is causing extensive land abandonment, is a widespread by-product of current practices in agriculture and animal husbandry. Since 1945, 11 percent of the earth's vegetated surface has been degraded—an area larger than India and China combined—and per capita food production in many parts of the world is decreasing.

Forests Tropical rain forests, as well as tropical and temperate dry forests, are being destroyed rapidly. At present rates, some critical forest types will be gone in a few years, and most of the tropical rain forest will be gone before the end of the next century. With them will go large numbers of plant and animal species.

Living Species The irreversible loss of species, which by 2100 may reach one-third of all species now living, is especially serious. We are losing the potential they hold for providing medicinal and other benefits, and the contribution that genetic diversity of life forms gives to the robustness of the world's biological systems and to the astonishing beauty of the earth itself.

Much of this damage is irreversible on a scale of centuries, or permanent. Other processes appear to pose additional threats. Increasing levels of gases in the atmosphere from human activities, including carbon dioxide released from fossil fuel burning and from deforestation, may alter climate on a global scale. Predictions of global warming are still uncertain—with projected effects ranging from tolerable to very severe—but the potential risks are very great.

Our massive tampering with the world's interdependent web of life—coupled with the environmental damage inflicted by deforestation, species loss, and climate change—could trigger widespread adverse effects, including unpredictable collapses of critical biological systems whose interactions and dynamics we only imperfectly understand.

Uncertainty over the extent of these effects cannot excuse complacency or delay in facing the threats.

POPULATION The earth is finite. Its ability to absorb wastes and destructive effluent is finite. Its ability to provide food and energy is finite. Its ability to provide for growing numbers of people is finite. And we are fast approaching many of the earth's limits. Current economic practices which damage the environment, in both developed and underdeveloped nations, cannot be continued without the risk that vital global systems will be damaged beyond repair.

Pressures resulting from unrestrained population growth put demands on the natural world that can overwhelm any efforts to achieve a sustainable future. If we are to halt the destruction of our environment, we must accept limits to that growth. A World Bank estimate indicates that world population will not stabilize at less than 12.4 billion, while the United Nations concludes that the eventual total could reach 14 billion, a near tripling of today's 5.4 billion. But, even at this moment, one

person in five lives in absolute poverty without enough to eat, and one in ten suffers serious malnutrition.

No more than one or a few decades remain before the chance to avert the threats we now confront will be lost and the prospects for humanity immeasurably diminished.

WARNING We the undersigned, senior members of the world's scientific community, hereby warn all humanity of what lies ahead. A great change in our stewardship of the earth and the life on it is required, if vast human misery is to be avoided and our global home on this planet is not to be irretrievably mutilated.

WHAT WE MUST DO Five inextricably linked areas must be addressed simultaneously:

1. We must bring environmentally damaging activities under control to restore and protect the integrity of the earth's systems we depend on. We must, for example, move away from fossil fuels to more benign, inexhaustible energy sources to cut greenhouse-gas emissions and the pollution of our air and water. Priority must be given to the development of energy sources matched to Third World needs—small-scale and relatively easy to implement.

We must halt deforestation, injury to and loss of agricultural land, and the loss of terrestrial and marine plant and animal species.

2. We must manage resources crucial to human welfare more effectively. We must give high priority to efficient use of energy, water, and other materials, including expansion of conservation and recycling.

3. We must stabilize population. This will be possible only if all nations recognize that it requires improved social and economic conditions, and the adoption of effective, voluntary family planning.

4. We must reduce and eventually eliminate poverty.

5. We must ensure sexual equality, and guarantee women control over their own reproductive decisions.

The developed nations are the largest polluters in the world today. They must greatly reduce their overconsumption, if we are to reduce pressures on resources and the global environment. The developed nations have the obligation to provide aid and support to developing nations, because only the developed nations have the financial resources and the technical skills for these tasks.

Acting on this recognition is not altruism, but enlightened self-interest: whether industrialized or not, we all have but one lifeboat. No nation can escape from injury when global biological systems are damaged. No nation can escape from conflicts over increasingly scarce resources. In addition, environmental and economic instabilities will cause mass migrations with incalculable consequences for developed and undeveloped nations alike.

Developing nations must realize that environmental damage is one of the gravest threats they face, and that attempts to blunt it will be overwhelmed if their populations go unchecked. The greatest peril is to become trapped in spirals of environmental decline, poverty, and unrest, leading to social, economic, and environmental collapse.

Success in this global endeavor will require a great reduction in violence and war. Resources now devoted to the preparation and conduct of war—amounting to over \$1 trillion annually—will be badly needed in the new tasks and should be diverted to the new challenges.

A new ethic is required—a new attitude towards discharging our responsibility for caring for ourselves and for the earth. We must recognize the earth's limited capacity to provide for us. We must recognize its fragility. We must no longer allow it to be ravaged. This ethic must motivate a great movement, convincing reluctant leaders and reluctant governments and reluctant peoples themselves to effect the needed changes.

The scientists issuing this warning hope that our message will reach and affect people everywhere. We need the help of many.

We require the help of the world community of scientists—natural, social, economic, political;

We require the help of the world's business and industrial leaders;

We require the help of the world's religious leaders; and

We require the help of the world's peoples.

We call on all to join us in this task.

SELECTED SIGNERS OF THE WARNING

In 1992, the Union of Concerned Scientists sent the World Scientists' Warning for endorsement to all scientists worldwide who had been awarded the Nobel Prize, and to national academy-level scientists in Africa, Canada, China, Europe, India, Japan, Latin America, Russia, the United Kingdom, and the United States.

Over 1700 scientists, including 104 Nobel laureates—a majority of the living recipients of the Prize in the sciences—signed the Warning. These men and women represent 71 countries, including all of the 19 largest economic powers, all of the 12 most populous nations, 12 countries in Africa, 14 in Asia, 19 in Europe, and 12 in Latin America. Below is a list of some of the scientists who signed the Warning.

Anatole Abragam, France
Carlos Aguirre, Bolivia
Bruce Alberts, USA
Walter Alvarez, USA
Viqar Uddin Ammad, Pakistan
Claude Allegre, France
Michael Alpers, Papua New Guinea
Anne Anastasi, USA
*Philip Anderson, USA
*Christian Anfinsen, USA
How Ghee Ang, Singapore
*Werner Arber, Switzerland
Mary Ellen Avery, USA
*Julius Axelrod, USA
Michael Atiyah, Great Britain
Howard Bachrach, USA
John Backus, USA
Achmad Baiquni, Indonesia
*David Baltimore, USA
H. A. Barker, USA
Francisco J. Barrantes, Argentina
David Bates, Ireland
Alan Battersby, Great Britain
*Georg Bednorz, Switzerland
*Baruj Benacerraf, USA
Germot Bergold, Venezuela
*Sune Bergstrom, Sweden
Daniel Bes, Argentina
*Hans Bethe, USA
Arthur Birch, Australia
*Michael Bishop, USA
*Konrad Bloch, USA
*Nicholaas Bloembergen, USA
David Mervyn Blow, Great Britain

*Baruch Blumberg, USA
Bert Bolin, Sweden
*Norman Borlaug, USA
Frederick Bormann, USA
Raoul Bott, USA
Ronald Breslow, USA
Ricardo Bressani, Guatemala
Hermann Brück, Great Britain
Gerardo Budowski, Costa Rica
E. Margaret Burbidge, USA
Robert Burris, USA
Glenn Burton, USA
*Adolf Butenandt, Germany
Sergio Cabrera, Chile
Paulo C. Campos, Philippines
Ennio Candotti, Brazil
Henri Cartan, France
Carlos Chagas, Brazil
Sivaramakrishna Chandrasekhar, India
*Georges Charpak, France
Joseph Chatt, Great Britain
Shiing-Shen Chern, China
Christopher Chetsanga, Zimbabwe
Morris Cohen, USA
*Stanley Cohen, USA
Stanley N. Cohen, USA
Mildred Cohn, USA
*E. J. Corey, USA
*John Cornforth, Great Britain
Hector Croxatto, Chile
Paul Crutzen, Germany
Partha Dasgupta, Great Britain
*Jean Dausset, France
Ogulande Robert Davidson, Sierra Leone
Margaret Davis, USA

Luis D'Croz, Panama
*Gerard Debreu, USA
*Pierre-Gilles de Gennes, France
*Hans Dehmelt, USA
*Johann Deisenhofer, Germany
Frederica de Laguna, USA
Paul-Yves Denis, Canada
Pierre Deligne, France
Frank Dixon, USA
Johanna Döbereiner, Brazil
Joseph Doob, USA
*Renato Dulbecco, USA
Heneri Dzinotyiweyi, Zimbabwe
*Manfred Eigen, Germany
Samuel Eilenberg, USA
Mahdi Elmandjra, Morocco
Paul Ehrlich, USA
Thomas Eisner, USA
Mohammed T. El-Ashry, Egypt
*Gertrude Elion, USA
Aina Elvius, Sweden
K. O. Emery, USA
Paul Erdos, Hungary
*Richard Ernst, Switzerland
Vittorio Ersparmer, Italy
Sandra Faber, USA
Nina Federoff, USA
Herman Feshbach, USA
*Ernst Otto Fischer, Germany
Inga Fischer-Hjalmars, Sweden
Michael Ellis Fisher, Great Britain
*Val Fitch, USA
Dagfinn Follesdal, Norway
*William Fowler, USA
Otto Frankel, Australia
Herbert Friedman, USA
*Jerome Friedman, USA
Konstantin V. Frolov, Russia
*Kenichi Fukui, Japan
Madhav Gadgil, India
Mary Gaillard, USA
*D. Carleton Gajdusek, USA
Robert Gallo, USA
Rodrigo Gamez, Costa Rica
Antonio Garcia-Bellido, Spain
Leopoldo Garcia-Collin, Mexico
Percy Garnham, Great Britain
Richard Garwin, USA
*Murray Gell-Mann, USA
Georgii Georgiev, Russia
Humam Bishara Ghassib, Jordan
Ricardo Giacconi, USA

Eleanor J. Gibson, USA
Marvin Goldberger, USA
Maurice Goldhaber, USA
*Donald Glaser, USA
*Sheldon Glashow, USA
James Gowans, France
Roger Green, New Zealand
Peter Greenwood, Great Britain
Edward Goldberg, USA
Coluthur Gopalan, India
Stephen Jay Gould, USA
*Roger Guillemin, USA
Herbert Gutowsky, USA
Erwin Hahn, USA
Gonzalo Halfiter, Mexico
Kerstin Hall, Sweden
Mohammed Ahmed Hamdan, Jordan
Adnan Hamoui, Kuwait
A. M. Harun-Ar Rashid, Bangladesh
Mohammed H. A. Hassan, Sudan
Ahmed Hassanli, Tanzania
*Herbert Hauptman, USA
Stephen Hawking, Great Britain
Elizabeth Hay, USA
*Dudley Herschbach, USA
*Gerhard Herzberg, Canada
*Antony Hewish, Great Britain
*George Hitchings, USA
*Dorothy Crowfoot Hodgkin, Great Britain
*Roald Hoffman, USA
*Robert Holley, USA
Nick Holonyak, USA
Lars Hormander, Sweden
Dorothy Horstmann, USA
John Houghton, Great Britain
Sarah Hrdy, USA
Kenneth Hsu, China
Kun Huang, China
Hiroshi Inose, Japan
Turner T. Isoun, Nigeria
*François Jacob, France
Carl-Olof Jacobson, Sweden
Dorothea Jameson, USA
Daniel Janzen, USA
Cecilia Jarlskog, Sweden
Louise Johnson, Great Britain
Harold Johnston, USA
Victor A. Kabanov, Russia
*Jerome Karle, USA

Robert Kates, USA
Frederick I. B. Kayanja, Uganda
Joseph Keller, USA
*Henry Kendall, USA
*John Kendrew, Great Britain
Elisabeth Kessler, Sweden
Maung-U Khin, Myanmar
Gurdev Khush, India
Susan Kieffer, USA
*Klaus von Klitzing, Germany
*Aaron Klug, Great Britain
E. F. Knipling, USA
Walter Kohn, USA
Janos Kornai, Hungary
Aderemi Kuku, Nigeria
Ikuro Kushiro, Japan
Devendra Lal, India
Gerald Cecil Lalor, Jamaica
Gerardo Lamas-Muller, Peru
Torvard Laurent, Sweden
*Leon Lederman, USA
Sang Soo Lee, Rep. of Korea
*Yuan T. Lee, USA
Susan Leeman, USA
*Jean-Marie Lehn, France
*Wassily Leontief, USA
Luna Leopold, USA
Louis Leprince-Ringuet, France
Vladilen Letokhov, Russia
*Rita Levi-Montalcini, USA
Li Chang-lin, China
Shan Tao Liao, China
*William Lipscomb, USA
Jane Lubchenco, USA
Christopher Magazda, Zimbabwe
Lydia Phindile Makhubu, Swaziland
Khursheed Ahmad Malik, Pakistan
Lynn Margulis, USA
Paul Marks, USA
George Martine, Brazil
Frederico Mayor, Spain
Ernst Mayr, USA
Maclyn McCarty, USA
James McConnell, Ireland
Digby McLaren, Canada
*James Meade, Great Britain
Jerrold Meinwald, USA
M. G. K. Menon, India
Gennady Mesiatz, Russia
Jan Michalski, Poland
*Hartmut Michel, Germany
Brenda Milner, Canada

*César Milstein, Argentina
*Franco Modigliani, USA
Andrei Monin, Russia
Marcos Moshinsky, Mexico
*Nevill Mott, Great Britain
Teruaki Mukaiyama, Japan
Walter Munk, USA
Anne Murray, Sweden
*Joseph Murray, USA
Noreen Murray, Great Britain
Lawrence Mysak, Canada
Jayant Vishnu Narlikar, India
Anwar Nasim, Saudi Arabia
Kim Nasmyth, Great Britain
James Neel, USA
*Louis Néel, France
Yuval Ne'eman, Israel
Oleg M. Nefedov, Russia
*Erwin Neher, Germany
*Marshall Nirenberg, USA
Yasutomi Nishizuka, Japan
John S. Nkoma, Botswana
Paul Nchoji Nkwi, Cameroon
Howard Odum, USA
Bede Nwoye Okigbo, Nigeria
Ayub Khan Ommaya, Pakistan
Cyril Agodi Onwumechili, Nigeria
Mary Jane Osborn, USA
Yuri Ossipyan, Russia
Autar Singh Paintal, India
George Pake, USA
*George Palade, USA
Mary Lou Pardue, USA
*Linus Pauling, USA
Barbara Pearce, Great Britain
Muhammed Abed Peerrally, Mauritius
Manuel Peimbert, Mexico
Roger Penrose, Great Britain
John Philip, Australia
Lilian Pickford, Great Britain
John R. Pierce, USA
*John Polanyi, Canada
*George Porter, Great Britain
*Ilya Prigogine, Belgium
Giampietro Puppi, Italy
*Edward Purcell, USA
Atta ur-Rahman, Pakistan
G. N. Ramachandran, India
Tiruppattur Ramakrishnan, India

* Nobel laureate

About the Union of Concerned Scientists

The Union of Concerned Scientists (UCS) is dedicated to advancing responsible public policies in areas where science and technology play a critical role. Established in 1969, UCS has created a unique alliance between many of the United States' leading scientists and thousands of committed citizens. This partnership addresses the most serious environmental and security threats facing humanity.

UCS is currently working to encourage responsible stewardship of the global environment and life-sustaining resources; promote energy technologies that are renewable, safe, and cost effective; reform transportation policy; promote sustainable agriculture; and curtail weapons proliferation. An independent nonprofit organization, UCS conducts technical studies and public education, and seeks to influence government policy at the local, state, federal, and international levels.

For information about UCS and our work, visit the UCS site on the World Wide Web at <http://www.ucsusa.org>. Or you may call us at 617-547-5552 or send us an e-mail at ucs@ucsusa.org.
